Study description

The research aims to quantify the extent of codeine use, misuse and dependence in three countries (Ireland, United Kingdom and South Africa), with focus on therapeutic and non-therapeutic use, so as to create user profiles of use and abuse and capture individual user, pharmacy, medic and treatment provider perspectives. Data will be used to inform the design of pharmacy based brief interventions and customer monitoring systems, continuing staff training and management of appropriate treatment interventions. A mixed method approach will commence with a meta-analysis and systematic review of literature, which along with national pharmacist, medic and treatment provider surveying, will inform the design and implementation of sweep surveys of individuals purchasing OTC codeine in pharmacies, internet based codeine user focus groups targeting web based sales and use, and interviews with codeine users, mis-users and dependents in each country.

Methodological aspects

Study type

Study type list

Study type:

Not applicable

Scope of the study:

Assessment of risk minimisation measure implementation or effectiveness

Main study objective:

The research aims to quantify the extent of codeine use, misuse and dependence in three countries (Ireland, United Kingdom and South Africa), with focus on therapeutic and non-therapeutic use, so as to create user profiles of use and abuse and capture individual user, pharmacy, medic and treatment provider perspectives.

Study drug and medical condition

Study drug International non-proprietary name (INN) or common name

CODEINE

Population studied

Age groups

- Adults (18 to < 46 years)
- Adults (46 to < 65 years)
- Adults (65 to < 75 years)
- Adults (75 to < 85 years)
- Adults (85 years and over)

Estimated number of subjects

9500

Study design details

Outcomes

National, international reports, journal publications, public fact sheets, seminars, conference proceedings reflecting outputs from meta-analysis and systematic review of literature, national pharmacist, medic and treatment provider surveying, customer sweep surveys internet based codeine users and interviews with codeine users. Data will be used to inform the design of pharmacy based brief interventions for codeine misuse, inter pharmacy customer monitoring and tracking systems, continuing staff training (CPD) and management of appropriate codeine referral and treatment interventions.

Data analysis plan

Risk estimation: A mixed method approach will commence with a meta-analysis and systematic review of literature, national pharmacist, medic, treatment provider and customer surveying analysed with SPSS, internet surveillance and codeine user interviews and focus groups analysis assisted by NVIVO

Data management

ENCePP Seal

The use of the ENCePP Seal has been discontinued since February 2025. The ENCePP Seal fields are retained in the display mode for transparency but are no longer maintained.
