Regulatory

Was the study required by a regulatory body?

No

Methodological aspects

Study type

Study topic:

Disease /health condition

Other

Study topic, other:

Disease/Epidemiology study

Study type: Non-interventional study

Scope of the study:

Assessment of risk minimisation measure implementation or effectiveness

Data collection methods: Secondary use of data

Main study objective:

To learn the risk os suicidal behaviour associated with several medications

Study Design

Non-interventional study design

Case-control

Study drug and medical condition

Medical condition to be studied

Suicide attempt

Population studied

Short description of the study population

Patients with suicidal tendency of Psychiatric Unit in Spain.

Age groups

Adults (18 to < 46 years) Adults (46 to < 65 years) Adults (65 to < 75 years) Adults (75 to < 85 years) Adults (85 years and over)

Estimated number of subjects

2000
