Regulatory

Was the study required by a regulatory body?

Yes

Is the study required by a Risk Management Plan (RMP)?

Not applicable

Methodological aspects

Study type

Study type list

Study topic:

Human medicinal product

Study type:

Non-interventional study

Scope of the study:

Drug utilisation

Data collection methods:

Secondary use of data

Main study objective:

The objective of this study is to describe the utilization patterns of apixaban in the Netherlands.

Study drug and medical condition

Name of medicine

ELIQUIS

Population studied

Short description of the study population

Patients identified in the EHR database who have received an apixaban dispensation during the study period 01 Dec 2011 through 31 Dec 2014.

Age groups

Preterm newborn infants (0 – 27 days)

Term newborn infants (0 – 27 days)

Infants and toddlers (28 days – 23 months)

Children (2 to < 12 years)

Adolescents (12 to < 18 years)

Adults (18 to < 46 years)

Adults (46 to < 65 years)

Adults (65 to < 75 years)

Estimated number of subjects

896

Study design details

Outcomes

Off label use of apixaban.

Data analysis plan

Descriptive analyses of the data will be conducted. The proportionof patients receiving the drug for indications within and outside the approved label in each of the study years will be estimated and any trend over time will be described.
