Medical condition to be studied

Diabetic retinopathy

Diabetic retinal oedema

Age-related macular degeneration

Population studied

Short description of the study population

Patients with diabetic retinopathy, retinal oedema or age-related macular degeneration in the Tuscany region of Italy, from 2011 to 2015.

Age groups

Adults (18 to < 46 years)

Adults (46 to < 65 years)

Adults (65 to < 75 years)

Adults (75 to < 85 years)

Adults (85 years and over)

Special population of interest

Other

Special population of interest, other

Patients with diabetic retinopathy, retinal oedema or age-related macular degeneration

---

Estimated number of subjects

15000

Study design details

Outcomes

Number of injections per year and intra-injections interval, switchingless than 5 injections in the first year

Data analysis plan

Outcomes will be compared across incident users of the drugs. Subgroup analysis will be performed in patients with a sufficient number of contacts with ophthalmic services (interval between consecutive contacts not longer than 3 months) and in patient with at least 3 injections
