Methodological aspects

Study type

Study type list

Study topic:

Human medicinal product

Study type:

Non-interventional study

Scope of the study:

Disease epidemiology

Safety study (incl. comparative)

Main study objective:

The objective of this study is to determine the incidences of overall malignancies, melanoma, non-melanoma skin cancer, basal cell carcinoma, and squamous cell carcinoma in RA and PsA patients enrolled in the SRQ Register and who are receiving abatacept compared to patients who are receiving non-targeted DMARDs and compared to patients receiving targeted DMARDs.

Study Design

Non-interventional study design

Cohort

Study drug and medical condition

Medicinal product name

ORENCIA

Medical condition to be studied

Rheumatoid arthritis

Psoriatic arthropathy

Population studied

Age groups

- Adults (18 to < 46 years)
- Adults (46 to < 65 years)
- Adults (65 to < 75 years)
- Adults (75 to < 85 years)

- Adults (85 years and over)

Estimated number of subjects

4000

Study design details

Outcomes

Overall malignancies, melanoma, non-melanoma skin cancer, basal cell carcinoma, and squamous cell carcinoma

Data analysis plan

Analyses of rates of specified malignancy outcomes - incidence and hazard ratio considering comparators.

Data management

ENCePP Seal

The use of the ENCePP Seal has been discontinued since February 2025. The ENCePP Seal fields are retained in the display mode for transparency but are no longer maintained.
