Date when funding contract was signed

Planned: 01/10/2014

Actual: 06/11/2014

Study start date

Planned: 01/11/2014

Actual: 11/11/2014

Data analysis start date

Planned: 30/11/2018

Date of final study report

Planned: 28/04/2020

Sources of funding

• Pharmaceutical company and other private sector

More details on funding

Boehringer Ingelheim

Regulatory

Was the study required by a regulatory body?

Yes

Is the study required by a Risk Management Plan (RMP)?

Not applicable

Methodological aspects

Study type

Study type list

Study type:

Non-interventional study

Scope of the study:

Assessment of risk minimisation measure implementation or effectiveness Effectiveness study (incl. comparative)

Main study objective:

The main objective is to monitor the safety profile and efficacy of GIOTRIF® (afatinib dimaleate, q.d) in Korean patients with locally advanced or metastatic non-small cell lung cancer (NSCLC).

Study Design

Non-interventional study design

Cohort

Study drug and medical condition

Medicinal product name

GIOTRIF

Medical condition to be studied

Non-small cell lung cancer

Population studied

Age groups

- Adults (18 to < 46 years)
- Adults (46 to < 65 years)
- Adults (65 to < 75 years)
- Adults (75 to < 85 years)
- Adults (85 years and over)

Estimated number of subjects

3000

Study design details

Outcomes

to monitor the safety profile of GIOTRIF, to evaluate the tolerability and efficacy of GIOTRIF

Data analysis plan

Safety analysis will be based on all patients treated. In accordance with local regulation, interim analyses are planned biannually for the initial two years and annually thereafter.

Data management

ENCePP Seal

The use of the ENCePP Seal has been discontinued since February 2025. The ENCePP Seal fields are retained in the display mode for transparency but are no longer maintained.
