Yes

Institution description

WCT Evidence, Worldwide Clinical Trials' Late-Stage research department, specializes in the design of peri-and post-approval studies focused exclusively on understanding the reasons behind product success in a clinic setting and the marketplace. Worldwide Clinical Trials has provided the operational infrastructure for large outcome studies across more than 4,000 sites and over 80,000 patients. Our experienced peri-and post-approval team has a long history of designing and implementing various registries, which allows the client to better evaluate real clinical practice. Our health economics and outcomes research team conducts an array of projects that examine the effect of healthcare interventions on patient-related, clinical and economical outcomes. Including surveys, record review and literature reviews, we create specific study design to ensure that our clients achieve their goals and enhance their understanding of the benefits, risks and results of treatments in a RW setting.

Institution details

Experience with collecting data directly from individual patients or respondents:

Yes

Interest in carrying out research that is funded by pharmaceutical companies:

Yes
