Yes

Institution description

The PharmacoEpidemiology & Drug Safety Research Group covers a wide range of research activities related to optimal use and safety of medication across the life course. We use Norwegian health registry data and birth cohorts and epidemiological methods to address questions of drug safety that cannot be studied in randomized controlled trials (RCTs). Our work includes monitoring of drug utilization research, medication safety in pregnancy, vaccine effectiveness, and methodology research. The research group is multidisciplinary and has expertise in pharmacoepidemiology, regulatory pharmacovigilance, biostatistics, genetics and pharmacotherapy. We are a data partner in the EU DARWIN project.

Institution details

Experience with collecting data directly from individual patients or respondents:

Yes

Interest in carrying out research that is funded by pharmaceutical companies:

No
