### Study description

This study will be a case-series analysis with the aim to review ICSRs reporting vaccination errors with fatal outcome as reported in EudraVigilance. Causality of the vaccine with regards to the fatal outcome will be assessed using the WHO

tool for causality assessment of AEFI. The case review will be performed by two independent reviewers, who will also estimate the contribution of the vaccination error to the fatal outcome.

**Scope of the study:**

Other

**If 'other', further details on the scope of the study**

Case review of spontaneous reporting data

**Main study objective:**

This study aims to review cases in Eudravigilance between 1 January 2001 and 31 December 2016 reporting vaccination errors with fatal outcome.

## Study Design

## Study design details

### **Outcomes**

Death

---

### **Data analysis plan**

Cases are identified from EudraVigilance using the Standard MedDRA Query for medication errors in combination with a reported vaccine and a fatal outcome. All cases received between 1 January 2001 and 31 December 2016 are included for the analysis. A causality assessment for death will be performed by two independent reviewers using the AEFI causality assessment form of the WHO and an estimation of the impact of the error will be performed.

## Data management

### ENCePP Seal

The use of the ENCePP Seal has been discontinued since February 2025. The ENCePP Seal fields are retained in the display mode for transparency but are no longer maintained.
