Regulatory

Was the study required by a regulatory body?

Yes

Is the study required by a Risk Management Plan (RMP)?

EU RMP category 3 (required)

Methodological aspects

Study type

Study type list

Study type:

Non-interventional study

Scope of the study:

Assessment of risk minimisation measure implementation or effectiveness
Effectiveness study (incl. comparative)

Main study objective:

The primary objective of this study is to assess the long-term safety and efficacy of RemsimaTM in Rheumatoid Arthritis (RA) patients.

Study Design

Non-interventional study design

Cohort

Study drug and medical condition

Medicinal product name

REMSIMA

Medical condition to be studied

Disseminated tuberculosis

Cardiac failure congestive

Opportunistic infection

Serum sickness

Population studied

Age groups

- Adults (18 to < 46 years)
- Adults (46 to < 65 years)
- Adults (65 to < 75 years)
- Adults (75 to < 85 years)
- Adults (85 years and over)

Estimated number of subjects

450

Study design details

Outcomes

to assess the long term safety of Remsima in RA patients, to evaluate efficacy in patients with RA

Data analysis plan

the statistical analysis will be performed using SAS software version.9.1.3 or later. Interim report of study results will be generated every May from 2016 and the final report will be generated in 2026.
