Study protocol

(Japan) Botox in CFL E-DUI_protocol_20160316 (2).pdf(150.89 KB)

Regulatory

Was the study required by a regulatory body?

Yes

Is the study required by a Risk Management Plan (RMP)?

Non-EU RMP only

Methodological aspects

Study type

Study type list

Study type:

Non-interventional study

Scope of the study:

Assessment of risk minimisation measure implementation or effectiveness

Drug utilisation

Effectiveness study (incl. comparative)

Main study objective:

To collect and evaluate information on the safety, effectiveness and use of Botox Vista injection in adult patients younger than 65 years of age who are administered the study drug for the treatment of cross's feet lines.

Study Design

Non-interventional study design

Cohort

Study drug and medical condition
