Was the study required by a regulatory body?

No

Is the study required by a Risk Management Plan (RMP)?

EU RMP category 3 (required)

Methodological aspects

Study type

Study type list

Study topic:

Human medicinal product

Study type:

Non-interventional study

Scope of the study:

Effectiveness study (incl. comparative)

Data collection methods:

Primary data collection

Main study objective:

The Jext prescriber’s checklist constitutes a risk minimisation measure (RMM) for Jext, and is included in the Jext risk management plan. As a consequence, effectiveness of the RMM should be evaluated following its implementation into the market. The objective of this study is to assess the effectiveness of the implementation of the Jext prescriber’s checklist.

Population studied

Short description of the study population

Physicians who has received Jext prescriber’s checklist.

Age groups

Adults (18 to < 46 years)

Adults (46 to < 65 years)

Adults (65 to < 75 years)

Adults (75 to < 85 years)

Adults (85 years and over)

Estimated number of subjects

50

Study design details

Outcomes

To assess the effectiveness of the implementation of the Jext prescriber’s checklist.

Data analysis plan

Data analysis stage will consist of preparing the total tally of responses for each question posed. In addition, cross tabulations will be prepared for all survey questions against various sub-groups, e.g. physician types, caseloads and

practice setting. In addition to the responses to the questions of the main questionnaire, the number of respondents who have prescribed Jext, but are not familiar with the prescriber’s checklist, will be calculated.

Data management

ENCePP Seal

> The use of the ENCePP Seal has been discontinued since February 2025. The ENCePP Seal fields are retained in the display mode for transparency but are no longer maintained.
