Study description

Background: An increase in prescription of psychotropic medications in children and adolescents has been reported in some countries. We report the evolution in a Health Area in Spain in the period 2013-2017. Aims: To describe psychopharmacologic prescriptions and the users' profile in a paediatric population attending a Mental Health Care Service and its evolution between 2013-2017. Methods: a longitudinal observational study will be carried out. All electronic medical records of the pediatric population (0-18 years old) who attended our mental health area during this period will be included. Each year it will be treated as a specific cohort that includes all patients treated during that year to perform a trend analysis during the 5-year period. Demographic data, psychiatric diagnoses and psychotropic prescription will be collected for all patients treated.

Population studied

Short description of the study population

Pediatric population (0-18 years old) who attended Mental Health Care Service during the study period.

Age groups

- Term newborn infants (0 - 27 days)
 - Infants and toddlers (28 days - 23 months)
 - Children (2 to < 12 years)
 - Adolescents (12 to < 18 years)
-

Estimated number of subjects

4000

Study design details

Data analysis plan

A descriptive analysis will be carried out using the mean, standard deviation, median and range for continuous variables and counts and percentages for categorical variables. For the subgroup analysis, our population is grouped into one of three categories: babies from 0 to 5 years old, babies from 6 to 11 years old and teenagers from 12 to 18 years old. To determine significantly positive or negative trends over time, the trend tests of the Linear Association by Line will be used for variables with more than two categories analyzed. All statistical analyzes will be performed with the statistical software IBM® SPSS (Statistical

Package for the Social Sciences), version 18 (IBM® Corporation, Somers, NY, USA).

Data management

ENCePP Seal

The use of the ENCePP Seal has been discontinued since February 2025. The ENCePP Seal fields are retained in the display mode for transparency but are no longer maintained.
