Study description

Colobreathe, authorised in Europe in 2012 through a centralized procedure, is indicated for the management of chronic pulmonary infections due to P. aeruginosa in patients with CF aged 6 years and older. Colobreathe was approved with a requirement for additional risk minimisation measures, specifically, that healthcare professionals (HCPs) and patients are provided with educational material containing information on the need to comply with treatment, instructions on how to use the product (capsules and Turbospin inhaler device), and information on side effects. Educational material has been developed and disseminated in Europe to inform HCPs and patients of important information on the safe use of Colobreathe. This study is being conducted to assess the effectiveness of the educational material among HCPs who prescribe or administer, and patients who use, Colobreathe in Europe. The proposed study utilises a cross-sectional survey study design.

Forest Laboratories UK Limited, Teva B.V.

Regulatory

Was the study required by a regulatory body?

No

Is the study required by a Risk Management Plan (RMP)?

EU RMP category 3 (required)

Methodological aspects

Study type

Study type list

Study topic:

Human medicinal product

Study type:

Non-interventional study

Scope of the study:

Effectiveness study (incl. comparative)

Data collection methods:

Primary data collection

Main study objective:

The overall objective of this study is to evaluate process indicators of the effectiveness of the risk minimisation educational material implemented in the EU for Colobreathe, specifically, knowledge rates, and measures of distribution and use of, the Colobreathe RMM educational material.

Study Design

Non-interventional study design

Cross-sectional

Study drug and medical condition

Medicinal product name

COLOBREATHE

Population studied

Short description of the study population

Healthcare professionals (HCPs) who have prescribed or administered Colobreathe within the 12 months prior to completing the survey, and patients (or their caregivers) who have received Colobreathe within the 6 months prior to completing the survey.

Age groups

- Children (2 to < 12 years)
- Adolescents (12 to < 18 years)
- Adults (18 to < 46 years)
- Adults (46 to < 65 years)
- Adults (65 to < 75 years)
- Adults (75 to < 85 years)
- Adults (85 years and over)

Estimated number of subjects

300

Study design details

Outcomes

Knowledge rates of information included in the Colobreathe RMM educational material. Measures of distribution and use of the Colobreathe RMM educational material.

Data analysis plan

The primary analysis population will include all HCPs and patients/caregivers who have completed the survey. The primary criteria are the respondents' knowledge rates across each of the key risk minimisation educational messages for Colobreathe. Other criteria are measures of distribution and use of educational material.Knowledge rates for each of the key risk minimisation educational messages for Colobreathe will be calculated with 95% two-sided CI. Knowledge rates may also be reported by relevant subgroups such as country and recruitment method.
