### ENCePP partner

Yes

## Institution description

Evidera partners with life science organizations to optimize the market access and value of their products. The Database Analytics team conducts feasibility studies to provide clients with a critical assessment of the data options available to identify the datasets that will best meet the client's needs. The team's epidemiologists extract 'real-world' data from existing healthcare information sources and assess, among Others, treatment patterns, drug and resource utilization as well as incidence and prevalence of diseases and co-morbidities. Finally, Evidera's researchers have expertise in using and retrospectively analyzing data from a variety of databases in Europe and compiling database coding algorithms. Evidera's work

lacks the bias that the majority of competitors have based on their association with a single data source and, according to a 2009 survey, its various scientific teams are viewed by biopharmaceutical companies as the best in the industry.

## Institution details

**Experience with collecting data directly from individual patients or respondents:**

Yes

---

**Interest in carrying out research that is funded by pharmaceutical companies:**

Yes
