Not applicable

Methodological aspects

Study type

Study type list

Study topic:

Human medicinal product

Disease /health condition

Study type:

Non-interventional study

Scope of the study:

Safety study (incl. comparative)

Data collection methods:

Secondary use of data

Main study objective:

Meta-analysis on the incidence of neuropsychiatric adverse events associated with abiraterone+prednisone and enzalutamide observed in clinical trials and analysis of neuropsychiatric suspected adverse drug reactions reported in EudraVigilance for AAP and ENZ.

Study Design

Non-interventional study design

Systematic review and meta-analysis

Study drug and medical condition

Study drug International non-proprietary name (INN) or common name

ABIRATERONE ACETATE

Medical condition to be studied

Prostate cancer

Population studied

Short description of the study population

Patients treated with abiraterone+prednisone and enzalutamide.

Age groups

- Adults (46 to < 65 years)
 - Adults (65 to < 75 years)
 - Adults (75 to < 85 years)
 - Adults (85 years and over)
-

Estimated number of subjects

12000

Study design details

Outcomes

Meta-analysis on the incidence of neuropsychiatric adverse events associated with abiraterone+prednisone and enzalutamide observed in clinical trials. And analysis of neuropsychiatric suspected adverse drug reactions reported in EudraVigilance for abiraterone+prednisone (AAP) and enzalutamide (ENZ)

Data analysis plan

Meta-analysis was performed to estimate the pooled relative risk of neuropsychiatric adverse events (as listed in each clinical trial: COU-AA-302, COU-AA-301, Prevail and AFFIRM studies) for AAP vs control group and ENZ vs control group. The analyses were conducted using the Mantel-Haenszel fixed-effects model to obtain the average effect and the distribution of relative risk estimates. EudraVigilance: all reports have the same layout, data elements and functionalities. The figure displayed online is always a running total of serious/non-serious spontaneous cases reported in EEA countries. Each individual case in EudraVigilance refers generally to a single patient and it is composed of at least one report, called the initial report, which might be complemented by follow-up reports.

Data management

ENCePP Seal

The use of the ENCePP Seal has been discontinued since February 2025. The ENCePP Seal fields are retained in the display mode for transparency but are no longer maintained.
