Regulatory

Was the study required by a regulatory body?

Yes

Is the study required by a Risk Management Plan (RMP)?

EU RMP category 3 (required)

Methodological aspects

Study type

Study type list

Study type:

Non-interventional study

Scope of the study:

Assessment of risk minimisation measure implementation or effectiveness

Drug utilisation

Main study objective:

To study the adherence to the risk minimization measures in the product information by estimating the compliance with contraindications and target indication amongst incident romosozumab users, and analyzing the utilization patterns.

Study drug and medical condition

Name of medicine

Evenity

Medical condition to be studied

Osteoporosis postmenopausal

Population studied

Age groups

Adults (18 to < 46 years)

Adults (46 to < 65 years)

Adults (65 to < 75 years)
Adults (75 to < 85 years)
Adults (85 years and over)

Estimated number of subjects

1000

Study design details

Outcomes

Prevalence of contraindications amongst new romosozumab users, - Prevalence of documented indication amongst new romosozumab users- Monthly prevalence of use for each osteoporosis drug- Monthly incidence of use for each osteoporosis drug- Overall duration of treatment/persistence- Proportion persistent at 6, 12, 18, and 24 months- number and percentage of patients who switch to another osteoporosis medication

Data analysis plan

All measures of primary and secondary outcomes will be calculated for each of the contributing databases separately. Estimates will be provided overall (for the whole source population) and stratified by sex (except for use in men), age (5-year bands) and calendar year. Baseline characteristics of all users of romosozumab and of other osteoporosis medications, as well as of romosozumab users in each of the contraindication and restriction of indication groups, will be described.
