#### **Study description**

This is a non-interventional observational registry of paediatric patients receiving maintenance dialysis with sHPT and using cinacalcet. A patient will receive standard of care treatment as determined by the patient's physician.

#### Study status

Finalised

# Methodological aspects

Study type

# Study type:

Non-interventional study

#### Scope of the study:

Assessment of risk minimisation measure implementation or effectiveness Drug utilisation

#### Main study objective:

To describe patient characteristics, how cinacalcet is used, laboratory values over time, the incidence of hypocalcaemia, risk factors associated with time to hypocalcaemia event and management of hypocalcaemia in paediatric patients with secondary hyperparathyroidism (sHPT).

# Study Design

#### Non-interventional study design

Cohort

Other

#### Non-interventional study design, other

Retrospective and prospective chart review study

# Study drug and medical condition

#### Name of medicine MIMPARA

### Study drug International non-proprietary name (INN) or common name

CINACALCET

#### Anatomical Therapeutic Chemical (ATC) code

(H05BX01) cinacalcet cinacalcet

#### Medical condition to be studied

Hypocalcaemia Hyperparathyroidism secondary

# Population studied

#### Short description of the study population

The registry will enrol eligible paediatric patients on maintenance dialysis who are prescribed cinacalcet treatment.

#### Age groups

Paediatric Population (< 18 years) Children (2 to < 12 years) Adolescents (12 to < 18 years)

#### **Estimated number of subjects**

45

# Study design details

#### Outcomes

In a European cohort of paediatric patients with sHPT on maintenance dialysis and using cinacalcet: To describe the patient characteristics, how cinacalcet is used, the laboratory values (PTH, cCa, phosphate and albumin) over time and the incidence, management and risk factors associated with hypocalcaemia.

#### Data analysis plan

There are no formal hypotheses for the study. Descriptive data analyses will be performed. Characteristics of patients who develop and do not develop hypocalcaemia will be described. Treatment characteristics (cinacalcet and other sHPT medications) will be summarised prior to cinacalcet initiation and after a hypocalcaemia event. PTH, cCa, phosphate and albumin laboratory parameters over time will be summarised. To describe time-to-event of first hypocalcaemia event, cinacalcet discontinuation and cinacalcet re-initiation, Kaplan-Meier (KM) curves will be calculated.
