### Study countries

- Denmark
  - Norway
  - Sweden
- 

### Study description

The study will characterize patients with chronic immune thrombocytopenia, including prevalence and incidence of biopsies, risk factors associated with biopsies, and outcomes among these patients.

## Regulatory

**Was the study required by a regulatory body?**

No

---

**Is the study required by a Risk Management Plan (RMP)?**

Not applicable

## Methodological aspects

### Study type

### Study type list

**Study topic:**

Disease /health condition

---

**Study type:**

Non-interventional study

---

**Scope of the study:**

Disease epidemiology

**Data collection methods:**

Secondary use of data

---

**Main study objective:**

The objective of the study is to characterize patients with chronic immune thrombocytopenia who have had bone marrow biopsies.

## Study Design

## **Non-interventional study design**

Cohort

Case-control

# Study drug and medical condition

## **Medical condition to be studied**

Thrombocytopenia

# Population studied

## **Short description of the study population**

All adults ( $\geq 18$  years) with two or more ITP diagnoses registered at least 6 months apart from 1 January 1996 to 31 December 2017.

Exclusion criteria:

- o A diagnosis consistent with secondary ITP within 5 years before the date of cITP
  - o No recorded platelet count below  $150 \times 10^9/L$  according to the medical record
  - o A secondary cause of thrombocytopenia stated in the medical record.
- 

## **Age groups**

Adults (18 to < 46 years)

Adults (46 to < 65 years)

Adults (65 to < 75 years)

Adults (75 to < 85 years)

Adults (85 years and over)

---

## Special population of interest

Other

---

## Special population of interest, other

Immune thrombocytopenia Patients

---

## Estimated number of subjects

500

# Study design details

## Outcomes

Incidence and prevalence of bone marrow biopsy among patients with chronic immune thrombocytopenia. Characteristics of patients with chronic immune thrombocytopenia who have had a bone marrow biopsy, and outcomes for patients with immune thrombocytopenia who have had a bone marrow biopsy.

---

## Data analysis plan

Statistical analyses will be descriptive (incidence and prevalence) and exploratory (risk factors associated with biopsies as well as outcomes associated with bone marrow biopsies). The latter include hazard ratios for various outcomes.
