Yes

Institution description

The Centre for Pharmacoepidemiology (CPE) has over 20 years of experience working in a dynamic environment at the intersection of academia, healthcare, regulatory authorities and the pharmaceutical industry. CPE conducts research on drug safety, drug effectiveness and drug utilization and performs Post Authorisation Safety Studies (PASS) and Drug Utilization Studies (DUS) within the area of pharmacoepidemiology and real world evidence (RWE). A large part of the research is based on real world data from Swedish national registers at the National Board of Health and Welfare and Statistics Sweden. Data from quality registers and medical records are also included when relevant. As frequent participants and coordinators of large multinational projects, CPE has extensive experience in international collaboration, data sharing, and cross national data access legislation.

Institution details

Experience with collecting data directly from individual patients or respondents:

Yes

Interest in carrying out research that is funded by pharmaceutical companies:

Yes
