Regulatory

Was the study required by a regulatory body? Yes
Is the study required by a Risk Management Plan (RMP)? Non-EU RMP only
Methodological aspects
Study type
Study type list
Study topic: Human medicinal product
Study type: Non-interventional study
Scope of the study:
Assessment of risk minimisation measure implementation or effectiveness
Effectiveness study (incl. comparative) Safety study (incl. comparative)
Surety Study (IIICI. Comparative)
Data collection methods:
Primary data collection

Main study objective:

This investigation will be conducted to collect and evaluate information regarding the safety and efficacy of Encruse ELLIPTA under the actual post-marketing use conditions of the product.

Study Design

Non-interventional study design

Other

Non-interventional study design, other

Non interventional, Observational Post Marketing Surveillance under actual drug use condition.

Study drug and medical condition

Name of medicine, other

Encruse ELLIPTA

Population studied

Short description of the study population

This study was conducted in patients who were first prescribed Encruse for the approved indication, "relief of symptoms of obstructive airway disorder due to COPD (chronic bronchitis and emphysema)".

Age groups

Adults (18 to < 46 years)

Adults (46 to < 65 years)

Adults (65 to < 75 years)

Adults (75 to < 85 years)

Adults (85 years and over)

Special population of interest

Hepatic impaired

Other

Pregnant women

Renal impaired

Special population of interest, other

Chronic obstructive pulmonary disease (COPD) patients

Estimated number of subjects

1000

Study design details

Outcomes

Information regarding the safety and efficacy of Encruse ELLIPTA under the actual post-marketing use conditions of the product.

Data analysis plan

Items related to patient dispositionPatient demographic and baseline characteristicsItems related to safetyItems related to efficacy
