Study description

The primary objectives of the study are: • To longitudinally characterize the long-term effectiveness of DUPIXENT® through assessment of patient-reported symptoms, Health-Related Quality of Life (HRQoL) related to chronic rhinosinusitis with nasal polyposis (CRSwNP) and other type 2 comorbidities, and their change over-time. • To characterize patients who receive DUPIXENT® for CRSwNP in a real-world setting with respect to their medical history, demographic and disease characteristics, and type 2 comorbidities The secondary objectives of the study are: • To characterize real-world utilization of DUPIXENT® for patients with CRSwNP • To collect patient and physician global assessment of disease severity and treatment satisfaction for patients receiving DUPIXENT® for CRSwNP • To collect long-term safety data for patients receiving DUPIXENT® for CRSwNP

Study drug and medical condition

Medical condition to be studied

Chronic rhinosinusitis with nasal polyps

Population studied

Age groups

Adults (18 to < 46 years)

Adults (46 to < 65 years)

Adults (65 to < 75 years)

Adults (75 to < 85 years)

Adults (85 years and over)

Estimated number of subjects

1000

Study design details

Outcomes

• Baseline Patient Characteristics • Baseline Disease Characteristics, • Descriptive summaries of DUPIXENT and other CRSwNP treatments used during the study as defined in the protocol • Reasons for initiation of new CRSwNP treatments, concomitant therapies, treatment durations, and reasons for discontinuation and/or switching • Global assessment of disease severity and treatment satisfaction • Descriptive summary of adverse events See add'l info NCT04959448

Data analysis plan

Data collected in this registry will be analyzed descriptively.

Data management

ENCePP Seal

The use of the ENCePP Seal has been discontinued since February 2025. The ENCePP Seal fields are retained in the display mode for transparency but are no longer maintained.
