Institution description

Phase4CPH is a collaboration between Center for Clinical Research and Prevention and the Department of Clinical Pharmacology at Bispebjerg and Frederiksberg Hospital,Copenhagen.As a hospital-based center we create insight in clinical evidence-based use of medications: drug utilization,safety,effectiveness and health economics. We have a profound clinical insight in the Danish health registries,allowing us unique opportunities to investigate drug-exposure outcome relations. We have experience with studies on marketed drugs,both in broad populations and in specific subgroups. Furthermore,we have access to prospective cohorts,with a wide range of clinical measurements.We engage in- Public-private partnerships- Health authority-initiated studies - Post-authorization safety (PASS) and efficacy studies (PAES)- Comparative effectiveness research (CER)- Real world evidence on drug effectiveness,safety and utilization- Potential new indications for established drugs

Institution details

Experience with collecting data directly from individual patients or respondents:

Yes

Interest in carrying out research that is funded by pharmaceutical companies:

Yes
