Study timelines

Date when funding contract was signed

Actual: 17/11/2020

Study start date

Actual: 13/08/2021

Date of final study report

Planned: 31/12/2024

Sources of funding

Pharmaceutical company and other private sector

More details on funding

MSD (China) Holding Co., Ltd.

Regulatory

Was the study required by a regulatory body?

No

Is the study required by a Risk Management Plan (RMP)?

Not applicable

Methodological aspects

Study type

Study type list

Study type:

Non-interventional study

Scope of the study:

Disease epidemiology

Main study objective:

To determine the incidence of clinically significant CMV infection through Week 24 following allo-HSCT.

Study Design

Non-interventional study design

Cohort

Population studied

Age groups

Adults (18 to < 46 years)

Adults (46 to < 65 years)

Adults (65 to < 75 years)

Adults (75 to < 85 years)

Adults (85 years and over)

Estimated number of subjects

482

Study design details

Outcomes

Variables to collect for outcomes of interest include clinical outcomes following the allo-HSCT, particularly focusing on the incidence and clinical management for CMV infection.

Data analysis plan

Addressing primary and secondary objectives will be based on descriptive analysis. Subgroup analysis will be performed by pre-specified covariates. Changes of non-confirmatory analyses made after the protocol has been finalized, along with an explanation as to when and why they occurred, will be listed in the clinical study report (CSR) for the study. Post hoc exploratory analyses will be clearly identified in the CSR. The study does not plan to generate any association/casual inference between antiviral drug and CMV infection. The study analysis will not link any safety information to an antiviral drug (including a Merck product) or an antiviral drug class (containing a Merck product). A separate statistical analysis plan (SAP) may be created for this study and finalized before the end of data collection and database lock.

Data management

ENCePP Seal

The use of the ENCePP Seal has been discontinued since February 2025.

The ENCePP Seal fields are retained in the display mode for transparency but are no longer maintained.
