### **Study description**

This is a retrospective, multi-center observational cohort study. This study will be implemented first in Germany (approximately 50 sites), the United Kingdom (approximately 20 sites) and Sweden (approximately 25 sites), followed by a selected number of countries in Europe, depending on apremilast local availability. The design of this apremilast retrospective study aims to provide clinical information regarding the treatment initiation and outcomes in psoriasis patients when prescribed apremilast in real world settings. In addition, this study is aiming at capturing physicians' and patients' treatment goals when initiating apremilast and whether these goals are achieved following apremilast use. This study is primarily descriptive in nature, and no a priori hypotheses are specified. Patients must voluntarily sign an informed consent form, be 18 or over, have been diagnosed with plaque psoriasis and have been treated with apremilast during the previous 5-7 months to participate in this study. They must not be involved in any other clinical study involving apremilast.

## Methodological aspects

Study type

Study type list

**Study topic:**

Human medicinal product

Disease /health condition

---

**Study type:**

Non-interventional study

---

**Scope of the study:**

Other

**If 'other', further details on the scope of the study**

Observational study

**Data collection methods:**

Primary data collection

---

**Main study objective:**

The main objective of this study is to describe the treatment patterns and outcomes among apremilast users in routine clinical dermatology practice, from the physician and patient perspective.

## Study Design

**Non-interventional study design**

Cross-sectional

## Study drug and medical condition

**Name of medicine**

OTEZLA

---

**Medical condition to be studied**

Psoriasis

## Population studied

**Short description of the study population**

Patients treated for psoriasis with apremilast and their physicians completing questionnaires at 6 ( $\pm 1$ ) months after initiation of apremilast.

---

### **Age groups**

Adults (18 to < 46 years)

Adults (46 to < 65 years)

Adults (65 to < 75 years)

Adults (75 to < 85 years)

Adults (85 years and over)

---

### **Special population of interest**

Other

---

### **Special population of interest, other**

Psoriasis patients

---

### **Estimated number of subjects**

610

## Study design details

### **Data analysis plan**

Analyses will primarily be performed using descriptive and correlational statistical methods.
