Study description

There is a lack of comprehensive assessment about the processes involved for OSA patients, from sleep test, diagnosis, utilization of PAP, and their overall related health care service utilization. This study aims to examine OSA patients' adherence to PAP treatments, along with assessing their health care resource utilization (HCRU) and associated costs. Additionally, the study aims to explore the patient journey through different stages from the initial sleep test to being prescribed PAP treatment.

Regulatory

Was the study required by a regulatory body?

No

Is the study required by a Risk Management Plan (RMP)?

Not applicable

Methodological aspects

Study type

Study type list

Study type:

Non-interventional study

Scope of the study:

Other

If ‘other’, further details on the scope of the study

Treatment Exposure

Main study objective:

To examine initiation, short-term (6 months), and long-term (12 and 24 months) adherence patterns to positive airway pressure (PAP) therapy among commercially insured and managed Medicare US patients with obstructive sleep apnea (OSA).

Study Design

Non-interventional study design

Cohort

Study drug and medical condition

Medical condition to be studied

Obstructive sleep apnoea syndrome

Population studied

Age groups

Adults (18 to < 46 years)

Adults (46 to < 65 years)

Adults (65 to < 75 years)

Adults (75 to < 85 years)

Adults (85 years and over)

Estimated number of subjects

391272

Study design details

Data analysis plan

Descriptive statistics including means and standard deviations for continuous variables and frequencies for categorical values will be computed for all baseline variables including demographics, clinical characteristics, and SDOH data for the overall sample population.
