Study description

Observational Study, Retrospective observational study using electronic health care databases of various types in Europe. This study has 2 chronologically consecutive aims: 1) to conduct a feasibility assessment aiming to inform the safety evaluation study and 2) to assess the risk of developing pre-specified and newly identified AESIs following administration of Ad26.COV2.S.

Regulatory

Was the study required by a regulatory body?

Yes

Is the study required by a Risk Management Plan (RMP)?

EU RMP category 3 (required)

Methodological aspects

Study type

Study type list

Study topic:

Human medicinal product

Study type:

Non-interventional study

Scope of the study:

Assessment of risk minimisation measure implementation or effectiveness

Main study objective:

This study has 2 chronologically consecutive aims: 1) to conduct a feasibility assessment aiming to inform the safety evaluation study and 2) to assess the risk of developing pre-specified and newly identified AESIs following administration of Ad26.COV2.S.

Study Design

Non-interventional study design

Cohort

Other

Non-interventional study design, other

Self-Controlled Risk Interval

Study drug and medical condition

Study drug International non-proprietary name (INN) or common name

COVID-19 VACCINE JANSSEN (AD26.COV2.S)

Medical condition to be studied

Guillain-Barre syndrome

Myelitis transverse

Bell's palsy

Multiple sclerosis

Autoimmune thyroiditis

Thrombocytopenia

Immune thrombocytopenia

Type 1 diabetes mellitus

Acute aseptic arthritis

Anaphylactic reaction

Asthmatic crisis

Myocarditis

Microangiopathy

Heart failure with preserved ejection fraction

Stress cardiomyopathy

Coronary artery disease

Arrhythmia

Deep vein thrombosis

Pulmonary embolism

Disseminated intravascular coagulation

Haemorrhagic stroke

Ischaemic stroke

Cerebral venous sinus thrombosis

Thrombosis with thrombocytopenia syndrome

Acute kidney injury

Hepatic failure

Additional medical condition(s)

Not exhaustive list

Population studied

Age groups

Children (2 to < 12 years)

Adolescents (12 to < 18 years)

Adults (18 to < 46 years)

Adults (46 to < 65 years)

Adults (65 to < 75 years)

Adults (75 to < 85 years)

Adults (85 years and over)

Estimated number of subjects

370000

Study design details

Outcomes

predefined and newly identified AESIs among individuals exposed to Ad26.COV2.S

Data analysis plan

For the feasibility analysis the utilization patterns of Ad26.COV2.S and other COVID-19 vaccines will be characterized and monitored over time. The primary analysis will focus on the calculation and comparison of the incidence rates of each non-acute AESI between individuals exposed to Ad26.COV2.S and (1) unexposed individuals, (2) individuals exposed to another viral vector COVID-19 vaccine (ie, Vaxzevria® AZD1222 byOxford/AstraZeneca), and 3) individuals exposed receiving a mRNA COVID-19 vaccine (cohort).For acute events, the relative risk between risk window and control window will be estimated(SCRI) among individuals exposed to Ad26.COV2.S.
