Study description

This is a cohort-surveillance, secondary data use, non-interventional, post authorization safety study (PASS) based on data collected by the European Haemophilia Safety Surveillance System (EUHASS) from participating centers. The main goal of this study is to assess the incidence of thromboembolism (TE), thrombotic microangiopathy (TMA), and anaphylaxis under real-world conditions in patients exposed to emicizumab with or without coagulation factor products. Secondary objectives are: to estimate the incidence of TE and TMA in patients exposed to emicizumab alone and concomitantly with each of the following drugs: activated prothrombin complex concentrate (aPCC), recombinant activated factor VII (rFVIIa), and factor VIII (FVIII) product, to describe individual cases of TE and TMA identified in EUHASS, to summarize the frequency of other adverse events collected by EUHASS in patients exposed to emicizumab, and to describe individual cases of "unexpected poor efficacy" reported to EUHASS based on the available information.

# Methodological aspects

# Study type

# Study type list

#### **Study topic:**

Human medicinal product

#### Study type:

Non-interventional study

#### Scope of the study:

Assessment of risk minimisation measure implementation or effectiveness Safety study (incl. comparative)

#### **Data collection methods:**

Secondary use of data

#### Main study objective:

The primary objective for this study is to estimate the incidence of TE, TMA, and anaphylaxis under real-world conditions in patients exposed to emicizumab, with or without coagulation factor products.

# Study Design

Cohort surveillance

# Study drug and medical condition

#### Name of medicine

**HEMLIBRA** 

#### Study drug International non-proprietary name (INN) or common name

**EMICIZUMAB** 

#### **Anatomical Therapeutic Chemical (ATC) code**

(B02BX06) emicizumab emicizumab

#### Medical condition to be studied

Haemophilia A with anti factor VIII
Haemophilia A without inhibitors

# Population studied

#### Short description of the study population

The study population will consist of patients with Hemophilia A treated with emicizumab at centers participating in the EUHASS registry. Depending on the local approval/reimbursement decisions in the participating countries, the study population may include patients with any level of disease severity without FVIII inhibitors.

#### Age groups

Paediatric Population (< 18 years)

Neonate

Preterm newborn infants (0 - 27 days)

Term newborn infants (0 – 27 days)

Infants and toddlers (28 days - 23 months)

Children (2 to < 12 years)

Adolescents (12 to < 18 years)

Adult and elderly population (≥18 years)

Adults (18 to < 65 years)

Adults (18 to < 46 years)

Adults (46 to < 65 years)

Elderly (≥ 65 years)

Adults (65 to < 75 years)

Adults (75 to < 85 years)

Adults (85 years and over)

#### **Special population of interest**

Hepatic impaired

Immunocompromised

Pregnant women

Renal impaired

# Study design details

#### Data analysis plan

Descriptive statistics on endpoints, including number and percentage of patients, will be provided. Continuous variables will be summarized by mean, median, minimum, maximum, and interquartile range (IQR).

Categorical variables will be summarized by counts, percentages, and corresponding 95% confidence intervals (CIs). Data generated within the first 7 calendar years post-marketing authorization throughout the European Union (2018-2024) will be analyzed annually.

Proportions of each adverse event, along with corresponding 95% CIs, will be calculated annually for all patients exposed to emicizumab. In addition, proportions of TE and TMA will be calculated annually for patients exposed to emicizumab and each of the following agents: aPCC, rFVII, and FVIII.
