Study description

This observational retrospective study will be conducted at 5 sites. Around 200 subjects with relapsed or refractory B-cell precursor acute lymphoblastic leukemia who have initiated treatment with blinatumomab are planned to be included in this study. The planned study period is approximately 5 and a half years. Information will be collected to describe the baseline and clinical characteristics among the subjects. The study was cancelled on July 31, 2022

Methodological aspects

Study type

Study type list

Study type:

Non-interventional study

Scope of the study:

Assessment of risk minimisation measure implementation or effectiveness

Drug utilisation

Effectiveness study (incl. comparative)

Main study objective:

The main objective of this study is to describe outcomes of blinatumomab treatment among four groups of subjects.

Study Design

Non-interventional study design

Cohort

Study drug and medical condition

Medical condition to be studied

Acute lymphocytic leukaemia

Additional medical condition(s)

Relapsed or refractory B-cell precursor acute lymphoblastic leukemia

Population studied

Age groups

Adults (18 to < 46 years)

Adults (46 to < 65 years)

Adults (65 to < 75 years)

Adults (75 to < 85 years)

Adults (85 years and over)

Estimated number of subjects

200

Study design details

Outcomes

Estimate proportion of patients receiving complete remission (CR) following blinatumomab treatment for relapsed or refractory acute lymphoblastic

leukemia (R/R ALL) by baseline disease burden and cytoreductive therapy patient subgroups. Estimate disease-related patient outcomes and adverse events by baseline disease burden and cytoreductive therapy patient subgroups.

Data analysis plan

This study is a retrospective analysis of treatment outcomes among subject with relapsed or refractory B-cell precursor treated with blinatumomab. Descriptive summaries of subject characteristics among all subjects and among four groups (Groups 1-4) will be generated from all covariates. Counts and proportions with 95% confidence intervals (CIs) will be estimated for binary/categorical endpoints. Continuous endpoints will be described using means, standard deviations, medians and interquartile ranges, minima, and maxima. Time-to-event endpoints will be estimated with Kaplan-Meier (KM) curves and medians with associated 95% CIs, 6-month and 12-month survival proportions with associated 95% CIs will also be estimated.
