Study description

A retrospective cohort study to describe anticoagulant (AC) treatment patterns and health outcomes in patients with venous thromboembolism (VTE), using the French national health data system (SNDS).

Methodological aspects

Study type

Study type list

Study type:

Non-interventional study

Scope of the study:

Effectiveness study (incl. comparative)

Main study objective:

To describe anticoagulant treatment patterns and outcomes in patients with venous thromboembolism (VTE), using the French national health data system (SNDS), in two phases. Phase 1 involves descriptive analyses of patients' characteristics and treatment patterns for VTE patients, with and without active cancer. Phase 2 involves comparative effectiveness and safety analyses (only if powered)

Study Design

Non-interventional study design

Cohort

Study drug and medical condition

Study drug International non-proprietary name (INN) or common name

WARFARIN

Medical condition to be studied

Venous thrombosis

Population studied

Age groups

Adults (18 to < 46 years)

Adults (46 to < 65 years)

Adults (65 to < 75 years)

Adults (75 to < 85 years)

Adults (85 years and over)

Estimated number of subjects

24000

Study design details

Outcomes

Primary efficacy, Recurrent VTE Primary safety, Major Bleeding, Treatment discontinuation, Treatment switching

---

Data analysis plan

Phase I of this study would be descriptive in nature, including the number, percentage of patients who discontinue, and switch treatment. Patient characteristics will be summarised using numbers and percentages for categorical values and descriptive statistics (mean, SD, median, minimum, maximum and IQR) for continuous. Descriptive analyses will also be performed for specific subgroups. Phase II involves comparative safety and analyses, which for this study includes a number of clinical endpoints (recurrent VTE, major bleeding). Subgroup analyses are also planned.

Data management

ENCePP Seal

The use of the ENCePP Seal has been discontinued since February 2025. The ENCePP Seal fields are retained in the display mode for transparency but are no longer maintained.
