# Study timelines

### Date when funding contract was signed

Planned: 19/10/2020

Actual: 19/10/2020

### Study start date

Planned: 01/05/2021

Actual: 07/09/2021

## Date of interim report, if expected

Planned: 31/12/2023

Actual: 19/12/2023

### Date of final study report

Planned: 30/09/2024

Actual: 20/09/2024

# Sources of funding

• Pharmaceutical company and other private sector

## More details on funding

Sanofi-Genzyme

# Study protocol

alemtuzumab-lemtrada-pass-mort-protocol-may-2021\_Redacted.pdf (2.09 MB)

Redacted lem-mortality[csa002]-protocol-amendment-v4.0.pdf (2.02 MB)

# Regulatory

Was the study required by a regulatory body?

Yes

Is the study required by a Risk Management Plan (RMP)?

EU RMP category 1 (imposed as condition of marketing authorisation)

### Regulatory procedure number

EMEA/H/C/003718

# Methodological aspects

Study type

Study type list

#### **Study topic:**

Human medicinal product

#### Study type:

Non-interventional study

### Scope of the study:

Safety study (incl. comparative)

#### **Data collection methods:**

Combined primary data collection and secondary use of data

### Main study objective:

The primary objective is to ascertain whether multiple sclerosis (MS) patients treated with LEMTRADA have a higher risk of all-cause mortality than comparable MS patients treated with other HE-DMT.

## Study Design

### Non-interventional study design

Cohort

# Study drug and medical condition

#### Name of medicine

LEMTRADA

Study drug International non-proprietary name (INN) or common name

### **Anatomical Therapeutic Chemical (ATC) code**

(L04AG06) alemtuzumab alemtuzumab

#### Medical condition to be studied

Multiple sclerosis

# Population studied

### **Age groups**

Adults (18 to < 46 years)

Adults (46 to < 65 years)

Adults (65 to < 75 years)

Adults (75 to < 85 years)

Adults (85 years and over)

### **Estimated number of subjects**

9000

# Study design details

#### **Outcomes**

The primary outcome is the all-cause mortality.

The secondary outcome is the cause-specific mortality.

This secondary outcome will be exploratory as it is anticipated that availability and quality of cause-specific mortality data will be variable across data sources.

#### Data analysis plan

The following statistical analyses will be conducted separately in each data source:

- Descriptive statistics
- Crude and age-standardised mortality rates will be computed by exposure group (LEMTRADA vs other HE-DMT), for all MS patients and by gender.
- Propensity score (PS) model will be constructed in order to create two comparable groups of patients with similar distributions of risk factors (LEMTRADA vs other HE-DMT). PS weight will be computed using the standardised mortality ratio method.
- Risk of death among the LEMTRADA group compared to the other HE-DMT group will be expressed as hazard ratio (HR) and computed from a PS weighted time-dependent Cox proportional hazards model that will include a time-dependent exposure. A meta-analysis will be performed by iPRI to combine all HR from each data source in order to obtain a global estimate of the risk of death in the LEMTRADA group compared to the other HE-DMT group.
