Study description

The main objective of this survey is to assess whether sufficient levels of knowledge of posology and biological monitoring recommendations as described in the Exjade EU Summary of Product Characteristics (SmPC) can be attained among prescribers of Exjade/deferasirox, through the provision of Exjade EMs (which includes a Physician's reference checklist) developed by Novartis.

Methodological aspects

Study type

Study type list

Study type:

Non-interventional study

Main study objective:

To evaluate the effectiveness of Educational Material for Exjade (deferasirox)

Study drug and medical condition

Name of medicine

EXJADE

Study drug International non-proprietary name (INN) or common name

DEFERASIROX

Anatomical Therapeutic Chemical (ATC) code

(V03AC03) deferasirox

deferasirox

Population studied

Age groups

Adults (18 to < 46 years)

Adults (46 to < 65 years)

Adults (65 to < 75 years)

Adults (75 to < 85 years)

Adults (85 years and over)

Estimated number of subjects

400

Study design details

Outcomes

Percentage of correct response rate to the physician survey questionnaire

---

Data analysis plan

Physician knowledge will be evaluated in each of the two key sections separately: posology of Exjade, and biological monitoring recommendation for Exjade.

Success criteria of the survey will be based on the observed mean correct response rate for each section.

A threshold of correct response rate of at least 70% or more will be considered as a success for each section of the survey.

The mean correct response rate (in percentage) for each survey section is calculated taking the average of the proportion of correct responses within each section (total number of correct responses X 100/total number of questions in each section) based on all physicians participating in the survey.
