## Study description

Human immunodeficiency virus (HIV) is the etiologic agent of acquired immunodeficiency syndrome (AIDS).

The HIV infection (mainly HIV-1 infection) epidemic in China has evolved significantly over the past 35 years and it remains a major public health problem.

Doravirine (DOR, tradename PIFELTRO™) is a nonnucleoside reverse transcriptase inhibitors (NNRTI) that is indicated in combination with other antiretroviral medicinal products for the treatment of adults infected with HIV-1 without resistance to the NNRTI class.

Doravirine, lamivudine, tenofovir disoproxil fumarate(DOR/3TC/TDF, tradename DELSTRIGO™) is a fixed-dose combination indicated for the treatment of adults infected with HIV-1. PIFELTRO™ and DELSTRIGO™ were approved in China in 2020.

The study aims to assess the effectiveness of doravirine-included highly active antiretroviral therapy (HAART) in HIV-1 infected adult Chinese participants by a retrospective observational study design using medical chart review.

## Regulatory

### **Was the study required by a regulatory body?**

Yes

---

### **Is the study required by a Risk Management Plan (RMP)?**

Not applicable

## Methodological aspects

### Study type

### Study type list

**Study topic:**

Human medicinal product

---

**Study type:**

Non-interventional study

---

**Scope of the study:**

Effectiveness study (incl. comparative)

**Main study objective:**

The primary objective is to assess the effectiveness of doravirine-included HAART in HIV-1 infected adult Chinese participants.

## Study Design

**Non-interventional study design**

Other

---

**Non-interventional study design, other**

Retrospective multi-center observational study

## Study drug and medical condition

**Medicinal product name**

PIFELTRO

---

**Study drug International non-proprietary name (INN) or common name**

DORAVIRINE

---

## **Anatomical Therapeutic Chemical (ATC) code**

(J05AG06) doravirine

doravirine

---

## **Medical condition to be studied**

HIV infection

## Population studied

### **Age groups**

- Adults (18 to < 46 years)
  - Adults (46 to < 65 years)
  - Adults (65 to < 75 years)
  - Adults (75 to < 85 years)
  - Adults (85 years and over)
- 

### **Special population of interest**

Hepatic impaired

Immunocompromised

Renal impaired

---

### **Estimated number of subjects**

350

## Study design details

### **Outcomes**

Virologic suppression (VS, HIV-1 RNA < 50 copies/mL) achieved at week 48±8 following PIFELTRO™ and DELSTRIGO™ administration.

Demographics, clinical characteristics and HIV-1 treatment patterns in the study population.

---

### **Data analysis plan**

A descriptive analysis will be conducted. For the continuous variables we are interested, the values of mean/median, standard deviation (SD), min/max, interquartile range (IQR, including the first quartile Q1 and third quartile Q3) will be calculated, the frequency and percentages will be calculated for these categorical variables.

Effectiveness will be assessed as the proportion of patients with VS at week 48±8 will be calculated with a 95% CI.
