## **Study description**

What is the incidence of treatment-related intercurrent events common in clinical trials in patients with major depressive disorder?

Study objectives, to examine the proportion of patients with newly diagnosed major depressive disorder who start treatment with antidepressants, NSRIs, SSRIs, or other anti-depressants, as well as those who switch or discontinue treatment at specific intervals 4, 6, 8, 12, and 24 weeks after treatment initiation, stratified by age, sex, and country - database during the study period 2013 - 2022, to estimate the duration of antidepressant, use in patients with newly diagnosed major depressive disorder who initiate treatment with antidepressants, NSRIs, SSRIs, or other antidepressants, stratified by age, sex, and country - database during the study period 2013 - 2022, to assess the proportions of patients with newly diagnosed major depressive disorder who initiate, switch, or discontinue treatment with psycholeptics, antipsychotics, anxiolytics, hypnotics, and sedatives at specific intervals 4, 6, 8, 12, and 24 weeks after starting antidepressant therapy, stratified by age, sex, and country - database during the study period 2013 - 2022.

## Methodological aspects

### Study type

#### Study type list

**Study type:**

Non-interventional study

---

**Main study objective:**

To examine the proportion of patients with newly diagnosed major depressive disorder who start treatment with antidepressants and psycholeptics and of those the proportion who switch or discontinue treatment by specific timepoints after treatment initiation, stratified by age group, sex, and country.

### Study Design

**Non-interventional study design**

Cohort

### Population studied

## Age groups

Adolescents (12 to < 18 years)

Adults (18 to < 46 years)

Adults (46 to < 65 years)

Adults (65 to < 75 years)

Adults (75 to < 85 years)

Adults (85 years and over)

---

## Estimated number of subjects

19300000

# Study design details

## Outcomes

Treatment initiation, treatment discontinuation and treatment switch.

---

## Data analysis plan

Percentage of patients initiating treatment with specific antidepressants or psycholeptics. Percentage of patients switching treatment to specific antidepressants or psycholeptics. Percentage of patients discontinuing treatment with specific antidepressants or psycholeptics. Estimation of the mean, median, 25th percentile, 75th percentile, minimum, and maximum durations of antidepressant use.
