Study description

This will be a descriptive, retrospective cohort study conducted utilizing the IQVIA PharMetrics® Plus database to assess the reduction of asthma exacerbations and healthcare resource utilization among Tezspire users.

Methodological aspects

Study type

Study type list

Study topic:

Human medicinal product

Study type:

Non-interventional study

Scope of the study:

Effectiveness study (incl. comparative)

Data collection methods:

Secondary use of data

Study design:

Descriptive retrospective cohort study.

Main study objective:

Assess the reduction of asthma exacerbations resulting in hospitalizations, emergency visits, or outpatient visits and the reduction in exacerbation related health care resource use after initiation of Tezspire (post-index period) compared to the pre-index period.

Study Design

Non-interventional study design

Cohort

Study drug and medical condition

Medicinal product name

TEZSPIRE

Study drug International non-proprietary name (INN) or common name

TEZEPELUMAB

Anatomical Therapeutic Chemical (ATC) code

(R03DX11) tezepelumab

tezepelumab

Medical condition to be studied

Asthma

Additional medical condition(s)

Asthma

Population studied

Age groups

- Adolescents (12 to < 18 years)
- Adults (18 to < 65 years)
  - Adults (18 to < 46 years)
  - Adults (46 to < 65 years)
- Elderly (≥ 65 years)
  - Adults (65 to < 75 years)
  - Adults (75 to < 85 years)
  - Adults (85 years and over)

Estimated number of subjects

300

Study design details

Setting

The index date will be between December 2021 (Tezspire [tezepelumab-ekko] launch) and the latest data available at the time of study execution (January 2024). The pre-index period will be the 12-months preceding the index date. The post-index period will be the 12-months following Tezspire (tezepelumab-ekko) initiation.

Comparators

NA

Outcomes

Reduction of Annualized asthma exacerbation rate.

Data analysis plan

Categorical study variables will be reported as frequencies (counts and percentages). Continuous variables will be described by means, standard deviation (SD), median, and ranges. Asthma exacerbations will be reported as AAER (events per patient-year) assessed during the pre- and post-index, separately. One-sided paired t-tests will be used to test for differences in continuous outcomes observed between the pre- and post-index. McNemar-Bowker tests will be used to assess for pre-post differences in categorical variables.

Data management

ENCePP Seal

The use of the ENCePP Seal has been discontinued since February 2025. The ENCePP Seal fields are retained in the display mode for transparency but are no longer maintained.
