Study description

In the context of chronic diseases with relatively low prevalence, how do direct and indirect RWD-based estimates of prevalence compare with each other?

The specific objectives of this study are to:
1) Estimate the disease prevalence (direct estimate based on the proportion of individuals with the condition).
2) Estimate the disease incidence rate.
3) Estimate duration of disease using Kaplan-Meier survival curves. Of particular interest is the estimate of median survival as a summary measure of disease duration.
4) Produce an indirect estimation of prevalence as the product of incidence and median survival.
for the following diseases:
- Cystic fibrosis
- Haemophilia (A and/or B)
- Pulmonary arterial hypertension
- Pancreatic cancer
- Sickle cell disease

Results will be provided overall and where possible stratified by age group: paediatrics (0-17 years old) and adults (18 years old and above).

Yes

Is the study required by a Risk Management Plan (RMP)?

Not applicable

Methodological aspects

Study type

Study type list

Study topic:

Disease /health condition

Study type:

Non-interventional study

Study design:

A retrospective cohort design to estimate disease point prevalence and incidence. A retrospective cohort design to estimate median survival as a proxy for disease duration. Data from three databases with routinely-collected

electronic healthcare records of general practices will be used.

Main study objective:

The objective of this study is to compare direct and indirect estimations of prevalence of some rare, chronic diseases.

Study drug and medical condition

Medical condition to be studied

Cystic fibrosis

Haemophilia

Pulmonary arterial hypertension

Pancreatic carcinoma

Sickle cell disease

Population studied

Age groups

- **Paediatric Population (< 18 years)**
  - Preterm newborn infants (0 – 27 days)
  - Term newborn infants (0 – 27 days)
  - Infants and toddlers (28 days – 23 months)
  - Children (2 to < 12 years)
  - Adolescents (12 to < 18 years)
- **Adult and elderly population (≥18 years)**
  - Adults (18 to < 65 years)
    - Adults (18 to < 46 years)
    - Adults (46 to < 65 years)

- Elderly (≥ 65 years)
  - Adults (65 to < 75 years)
  - Adults (75 to < 85 years)
  - Adults (85 years and over)
