Network description

The EU-funded TIMESPAN project aims to advance the management of patients with attention deficit hyperactivity disorder (ADHD) and co-occurring cardiometabolic disease by improving available treatments and risk stratification. The two conditions share substantial comorbidity and common genetics, with cardiometabolic disease leading to premature deaths and placing a substantial burden on healthcare systems.

Moreover, the co-existence of psychiatric disorders in patients with this profile cannot be overlooked.

The project's work is expected to improve the clinical outcomes as well as the quality of life of adult ADHD patients with co-occurring cardiometabolic disease.

Network details

Network primary therapeutic area:

- Cardiovascular diseases
 - Other
 - Psychiatry
-

Network funding:

- • EU institutional research programme
