Study description

ADVAGRAF is a medicine used after kidney transplants to stop the immune system from rejecting the new kidney. This study will use information from clinics in Europe to learn more about the outcomes of kidney transplants treated with ADVAGRAF. This type of study is called a real-world study.

Methodological aspects

Study type

Study type list

Study topic:

Disease /health condition
Human medicinal product

Study type:

Non-interventional study

Scope of the study:

Effectiveness study (incl. comparative)

Data collection methods:

Secondary use of data

Study design:

This study is a secondary data project designed as a retrospective, non-interventional, observational, multi-center chart review conducted in adult patients, who underwent standard criteria donor or expanded criteria donor

kidney transplant and received ADVAGRAF-based therapy.

Main study objective:

The main aim of this study is to collect information about the long-term outcomes of kidney transplants treated with ADVAGRAF in Europe. Researchers will also learn how factors like sex, age, bodyweight, and other treatments might affect transplant outcomes.

Study Design

Non-interventional study design

Cohort

Study drug and medical condition

Medicinal product name

ADVAGRAF

Study drug International non-proprietary name (INN) or common name

tacrolimus

Population studied

Short description of the study population

The people in this study will have had a kidney transplant from a donor under 50 years of age (standard criteria donor), or over 50 years of age (expanded criteria donor). They had their kidney transplants between 2008 and 2014 and were treated with ADVAGRAF.

Age groups

- **Adult and elderly population (≥ 18 years)**
-

Estimated number of subjects

180

Study design details

Outcomes

1. Patient survival: Time to death, Cumulative mortality at the end of follow-up.
2. Graft survival: Time to graft failure, Cumulative incidence of overall graft failure at the end of follow-up, Time to death-censored graft survival, Cumulative incidence of death-censored graft failure at the end of follow-up.
