Study description

PROGRES 2.0 is a multi-country, non-interventional, observational cohort study conducted voluntarily by Pfizer to assess the long-term effectiveness and safety of both a
daily hGH Genotropin (somatropin) and a long-acting hGH Ngenla (somatrogon), at the
discretion of the treating physician according to routine clinical care in a real-

world setting.

This study will gather the data as a sub-study of the Global Registry for Novel Therapies in

Rare Bone and Endocrine Conditions (GloBE-Reg). Participants can be located anywhere in the world and will be followed for up to 10 years.
