Study description

Existing evidence from case reports and preclinical data raised concerns regarding the atrial and ventricular proarrhythmic potential of aliskiren, especially with underlying risk of atrial fibrillation. However, little is known about the usage of aliskiren in clinical practice, in particular characteristics of aliskiren users.

This study aims to characterise new aliskiren users to inform the planning and feasibility of a potential future safety study investigating risk of cardiac events.

Methodological aspects

Study type

Study topic:

Human medicinal product

Study type:

Non-interventional study

Scope of the study:

Drug utilisation

Data collection methods:

Secondary use of data

Study design:

A cohort study will be conducted using routinely collected health data from 4 databases from 4 countries across Europe and in 3 EU member states.

Main study objective:

1. To characterise new aliskiren users in terms of demographics, comorbidities, duration of use, and potential indications for aliskiren use, overall and stratified by age and by sex, during the study period of 2007–2014 and 2015–2024.
2. To assess the use of co-medication, both prior to and after new aliskiren treatment initiation, overall and stratified by age and by sex, during the study period of 2007–2014 and 2015–2024.
3. To estimate the number of people with both at least one aliskiren prescription/dispensation record(s) and a record of pre-specified cardiac events anytime during the study period of 2007–2014 and 2015–2024 (cross-cohort counts), overall and stratified by age and sex.

Population studied

Short description of the study population

Inclusion criteria

• All individuals with an aliskiren prescription or dispensing record within the study period: 01/01/2007 to 31/12/2014, and from 01/01/2015 to 31/12/2024 (or the latest available date)

Exclusion criteria

• Individuals starting first ever aliskiren with less than 365 days prior database history

Age groups

All

In utero

Paediatric Population (< 18 years)

Neonate

Preterm newborn infants (0 – 27 days)

Term newborn infants (0 – 27 days)

Infants and toddlers (28 days – 23 months)

Children (2 to < 12 years)

Adolescents (12 to < 18 years)

Adult and elderly population (≥18 years)

Adults (18 to < 65 years)

Adults (18 to < 46 years)

Adults (46 to < 65 years)

Elderly (≥ 65 years)

Adults (65 to < 75 years)

Adults (75 to < 85 years)

Adults (85 years and over)

Data management

ENCePP Seal

The use of the ENCePP Seal has been discontinued since February 2025. The ENCePP Seal fields are retained in the display mode for transparency but are no longer maintained.
