Description of data source

EpiPulse was launched on 22 June 2021. It integrates several surveillance systems that were previously independent (The European Surveillance System (TESSy),

the five Epidemic Intelligence Information System (EPIS) platforms and the Threat Tracking Tool (TTT)), provides new functionalities and seamless access to data in a single platform. The portal facilitates collection, analysis and dissemination of indicator- and event-based surveillance data on infectious diseases and associated health issues, including global epidemic intelligence, whole-genome sequencing, and health determinants.
