Description of data source

The OneHealthSecure project aims to support the 23 beneficiary countries in the Mediterranean region to adapt to climate change by tackling vector-borne diseases using a One Health approach. To achieve this, the project will capitalize on the unique One Health network established during the former MediLabSecure project by addressing remaining gaps in viral vector-borne diseases prevention

and preparedness. By using vector-borne diseases as a model, in the long term, the project aims to promote the recognition of One Health concept and the implementation of One Health practices in beneficiary countries.
