Institution description

CSD Medical Research is widely experienced in patient data for the healthcare industry, through numerous market researches and epidemiological studies. CSD

tools include:

- The Longitudinal Patient Databases (LPD) from Primary Care Physicians (and some panels of Specialists)
- The possibility to program additional screens to the electronic medical records of patients included into a study in the doctor's daily practice software so that the physician can complete them on a regular basis
- The INES[®] software, including many features like electronic CRF, data management, investigators CRM, distant study management tool

The CSD proprietary permanent Longitudinal Patient Databases (LPD) contains full actual prescription data, patient profiles and Other information collected by the office-based GPs from our panel GP group during the patient consultation into his medical record. Those records are based on the usual practice of the physician.
