Institution description

Outcome is a leader in patient registries, peri and post-approval studies, and integrated technologies for evaluating real-world outcomes. Since 1998 we have

been providing services and technologies for evaluating the safety, effectiveness, value, and quality of healthcare products, therapies, and services. Our technologies facilitate direct data collection from patients and medical care providers, including multi-lingual web-based capture, telephone/voice based capture, direct to patient websites, etc. We are also an international leader in interoperability between research systems for epidemiologic studies and electronic health record systems. Our teams have designed, developed, and managed an industry-leading number of patient registries including many of the largest and most well-recognized programs for disease outcomes, safety, and risk management. We are senior editors of the widely recognized book "Registries for Evaluating Patient Outcomes, A User's Guide."

Institution details

Experience with collecting data directly from individual patients or respondents:

Yes

Interest in carrying out research that is funded by pharmaceutical companies:

Yes
