Network description

EVICR.net is a multidisciplinary,multinational network of European ophthalmological clinical research sites for the development of clinical and translational research. EVICR.net brings together 89 clinical research centres from 15 European countries. The daily operational activities of the network are run by AIBILI,a research technology organisation in Portugal. We focus on innovative medicines and medical devices including diagnostic imaging and we follow the European and International Directives for Clinical Research according to harmonised SOPs. We provide a one-stop shop for entities that require research services in pharmacovigilence and pharmacoepidemiology with real-world evidence (RWE) and monitoring. We offer feasibility assessment for clinical sites participation and recruitment,advice on study design,administrative setup of contracts with Clinical Sites,certification and training of technical personnel.

Network details

Network primary therapeutic area:

- Eye disorders

Network funding:

- Pharmaceutical company and other private sector
