Network description

The EULAR RODS Study Group creates a platform for methodological, logistic, and scientific collaboration across European Rheumatology drug registers in order to maximise the potential use of the data collected within each register, to maximise the quality of the scientific outputs within and across registers, and to maximise the exchange of experiences across registers. Specifically, the Study Group aims • to share experience and best practice across all interested European rheumatology drug registers, extending beyond established registers and beyond biologics registers, through provision of regular open meetings • to create a mechanism for collaborative investigator-initiated project. • to provide the infrastructure to enable methods-development in collaborative analysis

Network details

Network primary therapeutic area:

- Musculoskeletal and joint diseases
-

Network funding:

- • Non-for-profit organisation (e.g. charity)
- • Other
