Network description

Psonet is a network of population-based registries of systemic treatment for psoriasis in Europe. Registries at different stages of development are associated in Psonet to date in the following countries: Australia,Austria,Czech Republic,Slovenia,Denmark,France,Germany,Israel,Italy,Portugal,Romania,Spain,Sweden,S Netherlands,UK. An interest in collaborating has been also expressed by representatives of the Lithuanian registry,and both by a Tunisian and a Greek group.Criteria for merging data from the registries have been developed and rules for conducting combined analyses have been established. Deliverables of the Psonet collaboration would include (1) comparative data on treatment strategies for psoriasis in Europe,(2) rapid alerts on newly recognised unexpected events,(3) regular reports on specific issues concerning effectiveness and safety. Collaboration with rheumatologic registries has been envisaged. A link with EADV has been established.

Network details

Network primary therapeutic area:

- Skin disorders

Network funding:

- Other

- Pharmaceutical company and other private sector
