## **APPENDIX 2. EPIDEMIOLOGY STEERING COMMITTEE & INDEPENDENT ADJUDICATION PANELS**

|    |                                                     |   |
|----|-----------------------------------------------------|---|
| A. | Epidemiology Steering Committee                     | 2 |
| B. | Independent Adjudication Panels (IAPs)              | 3 |
| C. | EPIDEMIOLOGY STEERING COMMITTEE – CHARTER           | 1 |
| D. | IAP: Serious Liver Injury / Disease (SLD) – Charter | 1 |
| E. | IAP: INTERSTITIAL LUNG Disease (ILD) – Charter      | 1 |
| F. | SAMPLE PATIENT PROFILES                             | 1 |

## **Study Committees**

This study included an Epidemiology Steering Committee for monitoring of study progress as well as an independent adjudication panel for each of the two outcome events. Each committee had its own charter with written roles and responsibilities. Written minutes were kept of all committee meetings.

### **A. EPIDEMIOLOGY STEERING COMMITTEE**

An external Epidemiology Steering Committee (ESC) was convened to provide scientific oversight and advice on the Epidemiologic Study Protocol. Degge's tasks associated with the ESC included identification of qualified members, administrative management, Charter development and approval, and Committee meeting management. The ESC met a total of seven (7) times; once in November 2011; once in November 2012; four (4) times in 2013; once in 2014; and once in 2016.

### **Administrative Management of Epidemiology Steering Committee**

Primary administrative management of the ESC included contracting with experts and facilitating arrangements for travel and accommodations related to committee meetings. Degge organized ESC meetings, provided Agenda and discussion items, distributed meeting materials to all members prior to meetings, and recorded, transcribed and disseminated meeting minutes to all participants.

### **Epidemiology Steering Committee Members**

The ESC consisted of seven experts in their fields, and included hepatologists, epidemiologists, statisticians, regulatory drug safety experts with experience in liver injury, and cardiologists. Panel members served for the term of the study, which was approximately five years. The ESC members were:

Judith K Jones, MD, PhD, FISPE, Chair  
The Degge Group, Ltd., Fairfax, Virginia

Rhonda L Bohn, ScD, MPH, FISPE, Co-Chair  
Rhonda L Bohn, LLC, Boston, Massachusetts

(Jean) Toby Barbey, MD, Cardiologist  
Social Scientific Sciences, Silver Spring, Maryland

(John) Michael Gaziano, MD, MPH, Cardiologist/Epidemiologist  
Brigham & Women's Hospital, Boston, Massachusetts  
[NOTE: Resigned as of 25 August 2014. A replacement was not identified.]

James H. Lewis, MD, Hepatologist  
Georgetown University, Washington, District of Columbia

Captain Sally Tamayo, MD, Cardiologist,  
Navy Medical Center, US Department of Defense, Portsmouth, Virginia

Susan T. Sacks, PhD, FISPE, Epidemiologist/Statistician  
Independent, Scottsdale, Arizona

## **Epidemiology Steering Committee Charter**

The Epidemiology Steering Committee Charter is provided below.

The Charter was initially approved on November 10, 2011 by the ESC. It was later revised to define the term “quorum” in [Section IX Voting](#). New wording appears with yellow highlighted text.

Decisions will be based upon a simple majority (**at least 3 out of 5**) or unanimity. When meeting by teleconference, members not physically present will be required to e-mail their decision on votes posed during that teleconference to the Chair and Co-Chair. The Chair and Co-Chair shall be non-voting members of the Committee.

## **B. INDEPENDENT ADJUDICATION PANELS (IAPS)**

Two separate IAPs were convened, one for each outcome event;

- Independent Adjudication Panel – Serious Liver Disease/Injury (IAP-SLD); and
- Independent Adjudication Panel – Interstitial Lung Disease (IAP-ILD).

## **Administrative Management of the IAPs**

Degge coordinated the outcome event review for the IAPs and convened all Adjudication Review Meetings to adjudicate differences in individual members’ outcome event judgments. Dr. Jones chaired the meetings with Earl Goehring and as needed provided technical details relating to the databases or the committee’s responsibilities, but did not provide additional clinical opinions on the cases. Degge also recorded meeting minutes and disseminated summaries of the meeting minutes to all participants.

## **IAP Members**

Each IAP, one devoted to serious liver disease (SLD) outcomes and the other to interstitial lung disease (ILD) outcomes, had three members. The goal was to have at least two specialists in each IAP representing their respective therapeutic areas (i.e., liver Injury or pulmonary disease). Members served for the term of the study.

**IAP-SLD members included:**

- Willis C. Maddrey, MD, *Assistant to the President*, UT Southwestern Medical Center, Dallas, Texas,
- Natalie GB Murray, MD, *Medical Director - Liver Transplantation*, Baylor All Saints Medical Center, Texas, Fort Worth, Texas,
- Mark Russo, MD, MPH, *Medical Director of Liver Transplantation, Chief, Division of Hepatology*, Carolinas Medical Center, Charlotte, North Carolina.

**IAP-ILD members included:**

- Kevin R. Flaherty, MD, MS, *Professor of Internal Medicine*, University of Michigan Health System, Ann Harbor, Michigan,
- David J. Lederer, MD, MS, *Associate Medical Director, NYP/Columbia Lung Transplant Program*, Columbia University Medical Center, New York, New York,
- Ganesh Raghu, MD, *Director, Center of Interstitial Lung Disease*, University of Washington Medical Center, Seattle, Washington.

## **IAP Charters and Procedures**

Each IAP had a Charter describing the Panel's role and responsibilities, the adjudication process, and voting rules. A critical feature of the charters was the requirement that each member evaluate the cases **individually** without consultation with other IAP members. Differences in judgements were adjudicated in joint meetings.

The clinical profiles to be reviewed were based upon date-specific electronic medical record summaries of patients' medical care, institutionalizations, physician visits, procedures and pharmaceuticals prescribed. (See example, below.) These were not medical "chart" reviews, and most of the panel members were not accustomed to reviewing clinical materials formatted this way. The investigators believed it was very important that the adjudicators clearly understood how to interpret the profile data. Practice sessions were therefore conducted for each panel in order to orient the members to reading and reviewing the medical history for each patient.

The Charters and Procedures for each Panel are provided below, as well as a copy of the individual review forms for each outcome event.

## **C. EPIDEMIOLOGY STEERING COMMITTEE - CHARTER**

### **EPIDEMIOLOGY STEERING COMMITTEE CHARTER**

**For  
Sanofi-Aventis -  
Dronedarone Surveillance Study**

**Charter Drafted:** October 26, 2011

**Charter Reviewed:** November 10, 2011

**Charter Approved:** November 10, 2011

**Revised and Approved:** November 8, 2012

# EPIDEMIOLOGY STEERING COMMITTEE CHARTER

## For Sanofi-aventis - Dronedarone Surveillance Program

## **Epidemiology Steering Committee CHARTER**

### **For Sanofi-aventis - Dronedarone Surveillance Program**

**Initial Review:** November 10, 2011

**Approved:** November 8, 2012

## **I. INTRODUCTION**

Dronedarone (Multaq®) is an anti-arrhythmic drug with effects from all four classes of the Vaughan Williams' classification indicated for treatment of patients with non-permanent atrial fibrillation. The recommended dose is 400 mg twice daily in adults. Dronedarone was initially authorized on July 20, 2009 in the United States. It is currently marketed in 27 countries in the Americas, Europe, and Asia. The calculated cumulative number of tablets distributed globally through September 2010 represents a total exposure of 79,503 patient-years.<sup>1</sup>

Two recent case reports that resulted in transplantation have necessitated the development of epidemiologic studies to examine dronedarone use and the occurrence of serious liver related injury.

To accomplish this goal, sanofi-aventis wishes to develop a comprehensive strategy for surveillance of a large proportion of the US population exposed to dronedarone, to determine the feasibility of detecting, characterizing, and quantifying the occurrence of serious liver injury associated with its use. In order to accomplish this, The Degge Group Ltd. (Degge) has proposed a multi-dimensional program which utilizes external data sources to meet the Company's objectives.

## **II. PURPOSE**

The Epidemiology Steering Committee (ESC) shall be responsible for overseeing the scientific integrity, validity of the study protocol, assessment of study quality and conduct, as well as, the scientific quality of interim reports and the final study report.

## **III. COMPOSITION OF THE COMMITTEE**

The ESC consists of five individuals who have expertise in one or more of the following areas: hepatology, cardiology, liver-associated injury, epidemiology, biostatistics, and regulatory drug

---

<sup>1</sup> Sanofi-Aventis. Dronedarone – Summary of Hepatic Safety Data Report, page 4, December 10, 2010.

safety. In addition, there will be a Committee Chair and Co-Chair.

The members include:

1. Judith K. Jones, MD, PhD, FISPE – Committee Chair (Non-voting member)
2. Rhonda L. Bohn, MPH, ScD, FISPE – Committee Co-Chair (Non-voting member)
3. (Jean) Tobey Barbey, MD
4. (John) Michael Gaziano, MD, MPH
5. James H. Lewis, MD
6. Commander Sally Tamayo, MD
7. Susan T. Sacks, PhD, FISPE

Degge will coordinate all Committee meetings and maintain minutes. Curriculum vitae of the members are attached. Earl Goehring, (Managing Director, The Degge Group, and Ltd.) will be charged with operational related items for the Steering Committee.

#### **IV. MEMBERSHIP TERM**

Committee members shall serve for the term of the study, which is estimated to last for approximately 4 years. If a member resigns or is otherwise unable to serve, a substitute will be selected in mutual agreement between the Chair and the sponsor. This substitute shall have the same duties and responsibilities as the other members.

#### **V. FINANCIAL DISCLOSURE AND CONFLICT OF INTEREST**

Members of the ESC will be individually responsible for disclosing to the Chair/Co-Chair, other members, the sponsor and – upon request – to authorities any pharmaceutical or medical device companies in which they hold a financial interest or consulting agreement that may represent a conflict for performance on this Board.

The ESC will be responsible for deciding whether such financial interests may reasonably be considered to have a potential impact on the Member's objectivity. If such a decision is made by a majority vote of the Committee members, the member must either divest themselves of those interests or resign from the Committee.

Members will be responsible for advising the Committee of any changes in their financial interests that may create a conflict of interest; these members will be asked to resign from the Committee or to divest themselves of those relationships/interests.

#### **VI. DATA PROVIDED FOR REVIEW**

Degge prepared and forwarded materials for the ESC to review. For the initial orientation meeting, the Committee members received the dronedarone package insert, the Dronedarone Surveillance Protocol, a draft copy of Charter, and additional background materials relevant to the study.

For subsequent meetings, the Chair/Co-Chair and Degge staff assured that the members have the appropriate materials at least one week prior to any planned meeting. The Chair will make the determination which materials were appropriate and needed to be provided.

## **VII. DATA REVIEW AND EVALUATION**

The information and data provided to the ESC was reviewed at Committee meetings. Since all data collected in this study are open, there is no need for closed sessions of the ESC. All meetings were held as 'open' meetings that sponsor representatives may attend.

## **VIII. MEETINGS**

An initial organizational meeting was convened in person at the offices of The Degge Group, Ltd. located in Arlington, Virginia on November 10, 2011. Sanofi-Aventis representatives will provide participants with an overview of the dronedarone history and current overall program. Further orientation was presented by the Chair/Co-Chair.

A schedule for further meetings and venue (face-to-face, teleconference) was established by the ESC in collaboration with the sponsor, bearing in mind the periodicity of interim study reports and potential authority requests that will require input and review by the ESC.

Committee members were given the opportunity to familiarize themselves with all aspects of the observational study, to provide scientific or methodological advice, and address any questions or concerns pertaining to the Committee. A briefing binder of all relevant materials was provided to Committee members to facilitate the Committee's deliberations for subsequent meetings.

## **IX. VOTING**

All members are required to be present in person or by telephone for a quorum, if a vote is to be cast. Decisions were based upon a simple majority (at least 3 out of 5) or unanimity. When meeting by teleconference, members not physically present will be required to e-mail their decision on votes posed during that teleconference to the Chair and Co-Chair. The Chair and Co-Chair were non-voting members of the Committee.

## **X. ROLE OF THE EPIDEMIOLOGY STEERING COMMITTEE**

The Epidemiology Steering Committee was charged with providing advice on the conduct and analysis of the Dronedarone Surveillance Study. While it is the prerogative of Sanofi-Aventis as the sponsor to change the protocol or to discontinue the study, Sanofi-Aventis will consult with the ESC for such changes.

## **XI. MINUTES**

The Chair and Co-Chair shall prepare minutes for the Committee meetings. The Chair/Co-Chair shall distribute the minutes to other Committee members and Sanofi-Aventis.

representatives within two weeks of the meeting. All minutes were reviewed and approved by the Committee to reflect the panel's opinions and conclusions regarding all reviewed issues.

## **XII. CONFIDENTIALITY**

All materials and information relating to this Committee shall be strictly confidential pursuant to Degge's confidentiality agreement.

## **XIII. PUBLICATION POLICY**

Epidemiology Steering Committee (ESC) members may author or contribute to a publication resulting from the surveillance study. The International Board of Medical Journal Editors (ICMJE) considers an "author" to be someone who has made substantive intellectual contributions to a published study, and biomedical authorship continues to have important academic, social, and financial implications. An author must take responsibility for at least one component of the work, should be able to identify who is responsible for each other component, and should ideally be confident in their co-authors' ability and integrity.

The ICMJE has recommended the following criteria for authorship; these criteria are still appropriate for journals that distinguish authors from other contributors.

- Authorship credit should be based on 1) substantial contributions to conception and design, acquisition of data, or analysis and interpretation of data; 2) drafting the article or revising it critically for important intellectual content; and 3) final approval of the version to be published. Authors should meet conditions 1, 2, and 3.
- When a large, multicenter group has conducted the work, the group should identify the individuals who accept direct responsibility for the manuscript. These individuals should fully meet the criteria for authorship/contributorship defined above, and editors may ask these individuals to complete journal-specific author and conflict-of-interest disclosure forms. When submitting a manuscript authored by a group, the corresponding author should clearly indicate the preferred citation and identify all individual authors as well as the group name.
- Acquisition of funding, collection of data, or general supervision of the research group alone does not constitute authorship.
- All persons designated as authors should qualify for authorship, and all those who qualify should be listed.
- Each author should have participated sufficiently in the work to take public responsibility for appropriate portions of the content.

All contributors who do not meet the criteria for authorship should be listed in an acknowledgments section. Authors should disclose the identity of the individuals who provided this assistance and the entity that supported it in the published article. Financial and material support should also be acknowledged.

## **Independent Adjudication Panel – Serious Liver Injury/Disease CHARTER**

For

**Serious Liver Injury And Interstitial Lung Disease Occurrences In Patients  
Diagnosed With Atrial Fibrillation Treated With Selected Anti-Arrhythmics**

**(DRONE\_C\_05917)**

### **I. INTRODUCTION**

Dronedaron (Multaq®) is an anti-arrhythmic drug with effects on all four classes of the Vaughan Williams' classification utilized for treatment of patients with non-permanent Atrial Fibrillation (AF). Dronedaron was initially authorized on 1 July 2009 in the United States. It is currently marketed in 32 countries in the Americas, Europe, and Asia.

Post-marketing pharmacovigilance data of spontaneous reports indicate safety signals related to interstitial lung disease (ILD), and serious liver injury /disease (SLD). In order to examine these associations in the real-world setting, where dronedaron is approved for non-permanent AF/AFL, Sanofi requested a retrospective cohort study examining the association between dronedaron and comparator anti-arrhythmic drugs and these subsequent events among adults.

The Degge Group, Ltd., a drug safety consulting firm, has been retained to help in the original study design and coordination of an epidemiologic study titled, "*Serious Liver Injury And Interstitial Lung Disease Occurrences In Patients Diagnosed With Atrial Fibrillation Treated With Selected Anti-Arrhythmics (DRONE\_C\_05917)*". Degge is also charged with providing oversight management and content support of the Epidemiology Steering Committee and the Independent Adjudication Panels (IAP), and to contribute to the final analysis of the results.

### **II. COMPOSITION OF THE ADJUDICATION PANEL**

The IAP consists of three individuals who bring 3+ years of experience and expertise relating to severe liver injury in patients, have the expertise to review individual profiles from electronic medical records and/or administrative claims data, and general clinical management of patients with liver injury.

The Panel includes:

- Judith K. Jones, MD, PhD, FISPE, President & CEO, The Degge Group, Ltd., Fairfax, VA (Panel Chair)
- Willis C. Maddrey, MD, University of Texas – Southwestern Medical Center,
- Natalie GB Murray, MD, Baylor All Saints Medical Center,
- Mark W. Russo, MD, MPH, Carolinas Medical Center.

Dr. Judith K. Jones will Chair the Panel and the meetings and with assistance of Degge staff, maintain minutes of the meetings. The curriculum vitae of the Panelists will be attached.

### **III. MEMBERSHIP TERM**

Panel members are to serve for the term of the study, which is estimated to last for approximately two years. If a Panel member is unable to serve, the Panel Chairperson shall select a substitute. This substitute shall have the same duties and responsibilities as the other members.

### **IV. FINANCIAL DISCLOSURE AND CONFLICT OF INTEREST**

Members of the IAP represent that they have disclosed to the Panel Chair any and all conflicts of interest that would prevent their participation and performance on the Panel.

Members will be responsible for advising the Panel of any changes in their financial interests that may create a conflict of interest. Members who develop financial relationships that might be perceived to result in conflicts of interests or to impair objectivity will be asked to resign from the Panel or to divest themselves of those relationships/interests. If they resign, the Chair shall select a replacement to serve on the IAP.

### **V. DATA PROVIDED FOR REVIEW**

Degge will prepare and forward materials for the IAP to review. For the initial orientation meeting, the Panel members will receive the package insert for each of the study drugs, the Study Protocol, and additional background material relevant to this study. For subsequent meetings, the Chair and Degge staff will assure that Panel members have the appropriate materials at least one week prior to the planned meetings.

### **VI. DATA REVIEW AND EVALUATION**

The information and data provided to the IAP will be reviewed independently by each member. Individual patient profile information may be discussed at closed Panel meetings. Closed sessions will comprise only the Panel members and Degge administrative staff. The Panel meetings may consist of open sessions where employees of Sanofi and HealthCore may be involved to provide project overviews and status updates. Individual patient profile information will not be discussed in open sessions.

### **VII. MEETINGS**

An initial organizational meeting will be convened in person at Degge's office in Fairfax, Virginia. Representatives of Sanofi will provide participants with an overview of the Dronedarone history and current overall program. The Study Protocol will be presented by Degge.

Panel members will be given the opportunity to familiarize themselves with all aspects of the observational study protocol and may ask any questions or concerns. A briefing binder of selected materials will be provided to Panel members to facilitate the discussions.

### **VIII.VOTING**

Since the Panel is small, all Panel members are required to be present in person or by telephone for a quorum, if a vote is to be cast. Decisions are based upon unanimous

agreement. The Chairperson will not vote. There will be discussion only if a decision is not unanimous and decision is based upon a simple majority.

## **IX. DECISIONS OF THE INDEPENDENT ADJUDICATION PANEL**

The IAP is charged with determining whether liver injury/disease outcome events are true cases as defined in the Epidemiology Study Protocol. The specific procedures for adjudication are in **Attachment 1**.

## **X. MEETING MINUTES**

The Chair shall prepare minutes from the Panel meetings. To assist the Chair in this responsibility, a Degge staff member shall be designated by the Chair to take minutes during each meeting. The Chair shall edit these minutes and distribute to the other Panel members, Sanofi, and data partners within two weeks of the meeting. The minutes shall be approved by the Panel by email as well as during the following meeting to accurately reflect the Panel's opinions and conclusions regarding all reviewed issues.

## **XI. CONFIDENTIALITY**

All Panel members have agreed to and are bound by Confidentiality Agreements. All materials and information relating to this Panel shall be maintained strictly confidential pursuant to Degge's confidentiality agreement.

## **XII. SUNSHINE ACT REPORTING**

Federal law requires that pharmaceutical companies fully capture all transfers of value made to any covered US licensed health care provider (physicians, nurse practitioners, nurses, hospitals, clinics, PBMs, health insurance carriers, etc.). As such, Degge is responsible for reporting to Sanofi any and all financial payments made to Panel members, who are active licensed physicians, for their participation while serving on the Panel.

## ATTACHMENT 1. PATIENT PROFILE REVIEW & ADJUDICATION PROCEDURES

### Serious Liver Injury And Interstitial Lung Disease Occurrences In Patients Diagnosed With Atrial Fibrillation Treated With Selected Anti-Arrhythmics (DRONE\_C\_05917)

#### Independent Adjudication Panel

The Independent Adjudication Panel has been created to review and adjudicate potential cases identified in each of the study databases as described in the current *Study Protocol*.

#### I. Potential Case Identification

##### A. Review Cases identified via Selection Algorithm

A selection algorithm was developed to identify potential outcome events in patients that are in the cohort study conducted in the US DoD and HealthCore Integrated Research Database (HIRD™) databases. Patient Profiles of the patients with potential outcome events will be provided to the IAP for outcome event adjudication and determination as defined in the study protocol.

##### B. Patient Profile Creation

Specifications on the layout of the Patient Profile will be provided to the groups involved in generating the profiles.

##### C. Receipt of Patient Profiles from Data Vendor

1. Patient profiles of potential cases will be provided to a Degge staff person in electronic format that is password protected.
2. The profile IDs and adjudicated status will be recorded in a tracking spreadsheet.

##### D. Storage of Patient Profiles

The creation and distribution of patient profile data from the US DoD and HIRD will adhere to Degge's Data Protection Policy, see **Attachment 2**. Copies are not provided to representatives of the sponsor, Sanofi, at any time.

##### E. IAP Review

The Panel, including the Chair, will be blinded to:

1. Study database, and
2. Study drugs of interest

## II. Patient Profile Review

### A. Initial Review

1. Staff Screening/Verification – Degge staff will review all profiles to:
  - a. Record potential case information in outcome event tracking spreadsheet,
  - b. Assure study database name and study drugs of interest have been blinded,
  - c. Determine that a study outcome is present,
  - d. Attach corresponding event review form with event definitions.

### B. Adjudication / Reconciliation Review Process

1. All Panel members will familiarize themselves with the Protocol and the outcome event definitions to facilitate decisions.
2. Assignment of Cases. Depending on the number of potential cases to review, the IAP may meet face-to-face for 1 or 2 full days, or review password protected electronic files containing a large number of cases.
3. Each Panel member will initially review potential cases independently:
  - a. To determine based upon the characteristics and timing relative to the blinded study drug's exposure, whether the designated liver event suggests a serious liver injury/disease outcome event as defined in the Study Protocol, and based on good clinical judgment. Event determination includes assignment as either:
    - “**Yes**” – the information provided meets the outcome event criteria,
    - “**No**” – the information provided does not meet the outcome event criteria, or
    - “**Indeterminate**” – the information provided does not meet the outcome event criteria, as defined in the study protocol, but the clinical picture suggests an outcome event.
4. Outcome Event Tabulation and Reconciliation:
  - a. Reviewer decisions will be tabulated for each case.
    - i. Cases with unanimous Reviewer agreement will have that determination assigned in the database. No further discussion will be needed.
    - ii. If disagreement between the Panel members exists, the patient profile will be discussed in a formal meeting where all three Panel members and the Chair are present. The Chair will lead the discussion. Panel members will each present reasoning for their decision, followed by a final vote. If a consensus is reached, that determination will be assigned in the database; else the event will be assigned as “Indeterminate”.

### C. Reporting Outcome Events back to Study Databases

Upon the IAP's completed review of all potential events, the final results (event determination) will be provided back to the respective study databases to continue the study analyses.

More detailed procedures and forms to facilitate decision-making may be developed in the first reviews of actual cases.

## ATTACHMENT 2. DATA PROTECTION POLICY – PROJECT SPECIFIC

**Project:** Sanofi: Dronedarone Surveillance Study      **Project #:** 0204-110  
**Location:** The Degge Group, Ltd. office only  
**Required:** Restricted Access – Fixed Storage Media  
**PM:** Earl Goehring, Managing Director, Research

### I. Restricted Access – Fixed Storage Media

1. Physical access to profile data will be restricted to authorized persons by the following:
  - a. All non-removable or (re-)writable storage media with profile data will be configured with file systems that support access control. These include:
    - i. Password protection of all devices storing profile data.
    - ii. Data files will have robust security settings in place managed by Earl Goehring, including password protection, strict management of “read-only” and “write-only” authors (e.g., Microsoft Office files Advanced Properties setting for Security & Protection).
  - b. System administrators will not be able to access files because they will not be saved on a shared network.
2. Access to devices with profile data will be logged.
3. Back-up
  - a. Back-up media will be secured from access by unauthorized persons.
4. System Changes & Management
  - a. Connections to services running on the host computer while the device with profile data are active will be limited to only the authorized users of the service.
  - b. Software firewalls, hardware firewalls, and service configuration will be in place.
5. Computer Virus Protection
  - a. Anti-virus and anti-spyware software will be installed and enabled for all computers/devices with profile data, and configured for daily scanning.
  - b. Integrity checking of devices with profile data will be conducted every 30 days.
6. There will only be two (2) copies of the storage device file containing the data – one copy will be on a secure device at Degge containing profile data for both US DoD and HIRD; HealthCore (Scott Quinlan) will maintain copies of the HIRD profile data.
  - a. Both storage devices will be encrypted and password protected to prevent unauthorized access.
7. All copies of the profile data will be destroyed according to a timeframe determined in collaboration with Sanofi. Data destruction will occur in the following ways:
  - a. For data provided on either CD-ROM or DVD will be shredded; and
  - b. Electronically shredded via “File Shredder” software. Software contains five options for shredding algorithms, ranging from simple one pass to DoD 5220-22.M to Guttman algorithm with 35 passes.

**SLD ADJUDICATION PANEL REVIEW FORM**  
***SERIOUS LIVER INJURY/DISEASE***

## ADJUDICATION REVIEW FORM: SERIOUS LIVER DISEASE (SLD)

## ADJUDICATION REVIEW FORM: SERIOUS LIVER DISEASE (SLD)

Patients were selected for review based on hospitalized occurrences of selected liver injury/disease codes, defined in the study protocol, occurring after a patient's index date. The selection algorithm is provided below.

### **A CODES (Probably reflects serious liver injury/disease)**

#### **ICD-9-CM Diagnosis (Inpatient setting; any code position)**

570 Acute and subacute necrosis of liver  
 572.2 Hepatic coma  
 572.4 Hepatorenal syndrome  
 V42.7 Liver replaced by transplant

#### **ICD-9-CM Procedures (Inpatient setting; any code position)**

50.5 Liver transplant  
 50.51 Auxiliary liver transplant  
 50.59 Other transplant of liver

#### **CPT (Inpatient setting; any code position)**

47135 Liver allotransplantation; orthotopic, partial or whole  
 47136 Liver allotransplantation; heterotopic, partial or whole

### **B CODES (Possibly reflects serious liver injury/disease)**

#### **ICD-9-CM Diagnosis (must be a primary discharge diagnosis)**

277.4 Disorders of bilirubin excretion  
 571.5 Cirrhosis of liver without mention of alcohol  
 572.8 Other sequelae of chronic liver disease  
 573.0 Chronic passive congestion of liver  
 573.3 Hepatitis, unspecified  
 573.8 Other specified disorders of liver  
 573.9 Unspecified disorder of liver  
 782.4 Jaundice, unspecified  
 794.8 Nonspecific abnormal results of liver function test

#### **ICD-9-CM Procedures (Inpatient setting; any code position)**

50.11 Closed (percutaneous) [needle] biopsy of liver  
 50.12 Open biopsy of liver  
 50.13 Transjugular liver biopsy  
 50.14 Laparoscopic liver biopsy  
 50.91 Percutaneous aspiration of liver

#### **CPT (Inpatient setting; any code position)**

47000 Biopsy of liver, needle; percutaneous  
 47001 Biopsy of liver, needle; done at time of other major procedure  
 47100 Biopsy of liver, wedge  
 78205 Liver imaging (SPECT)  
 78206 Liver imaging (SPECT); with vascular flow

## Independent Adjudication Panel – Interstitial Lung Disease

For

### Serious Liver Injury And Interstitial Lung Disease Occurrences In Patients Diagnosed With Atrial Fibrillation Treated With Selected Anti-Arrhythmics (DRONE\_C\_05917)

#### CHARTER

## I. INTRODUCTION

Dronedarone (Multaq®) is an anti-arrhythmic drug with effects on all four classes of the Vaughan Williams' classification utilized for treatment of patients with non-permanent Atrial Fibrillation (AF). Dronedarone was initially authorized on 1 July 2009 in the United States. It is currently marketed in 32 countries in the Americas, Europe, and Asia.

Post-marketing pharmacovigilance data of spontaneous reports indicate safety signals related to interstitial lung disease (ILD), and serious liver injury /disease (SLD). In order to examine these associations in the real-world setting, where dronedarone is approved for non-permanent AF/AFL, Sanofi requested a retrospective cohort study examining the association between dronedarone and comparator anti-arrhythmic drugs and these subsequent events among adults.

The Degge Group, Ltd., a drug safety consulting firm, has been retained to help in the original study design and coordination of an epidemiologic study titled, "*Serious Liver Injury And Interstitial Lung Disease Occurrences In Patients Diagnosed With Atrial Fibrillation Treated With Selected Anti-Arrhythmics (DRONE\_C\_05917)*". Degge is also charged with providing oversight management and content support of the Epidemiology Steering Committee and the Independent Adjudication Panels (IAP), and to contribute to the final analysis of the results.

## II. COMPOSITION OF THE ADJUDICATION PANEL

The IAP consists of three individuals who bring 3+ years of experience and expertise relating to interstitial lung disease in patients, have the expertise to review individual profiles from electronic medical records and/or administrative claims data, and general clinical management of patients with respiratory/lung disease.

The Panel includes:

- Judith K. Jones, MD, PhD, FISPE, *President & CEO*, The Degge Group, Ltd., Fairfax, VA, (**Panel Chair**)
- Kevin R. Flaherty, MD, MS, *Professor of Internal Medicine*, University of Michigan Health System, Ann Harbor
- David J. Lederer, MD, MS, *Associate Medical Director, NYP/Columbia Lung Transplant Program*, Columbia University Medical Center, New York
- Ganesh Raghu, MD, *Director, Center of Interstitial Lung Disease*, University of Washington Medical Center, Seattle

Dr. Judith K. Jones will Chair the Panel and the meetings and with assistance of Degge staff, maintain minutes of the meetings. The curriculum vitae of the Panelists will be attached.

### **III. MEMBERSHIP TERM**

Panel members are to serve for the term of the study, which is estimated to last for approximately two years. If a Panel member is unable to serve, the Panel Chairperson shall select a substitute. This substitute shall have the same duties and responsibilities as the other members.

### **IV. FINANCIAL DISCLOSURE AND CONFLICT OF INTEREST**

Members of the IAP represent that they have disclosed to the Panel Chair any and all conflicts of interest that would prevent their participation and performance on the Panel.

Members will be responsible for advising the Panel of any changes in their financial interests that may create a conflict of interest. Members who develop financial relationships that might be perceived to result in conflicts of interests or to impair objectivity will be asked to resign from the Panel or to divest themselves of those relationships/interests. If they resign, the Chair shall select a replacement to serve on the IAP.

### **V. DATA PROVIDED FOR REVIEW**

Degge will prepare and forward materials for the IAP to review. For the initial orientation meeting, the Panel members will receive the package insert for each of the study drugs, the Study Protocol, and additional background material relevant to this study. For subsequent meetings, the Chair and Degge staff will assure that Panel members have the appropriate materials at least one week prior to the planned meetings.

### **VI. DATA REVIEW AND EVALUATION**

Each member will review the information and data provided to the IAP independently. Individual patient profile information may be discussed at closed Panel meetings. Closed sessions will comprise only the Panel members and Degge administrative staff. The Panel meetings may consist of open sessions where employees of Sanofi and HealthCore may be involved to provide project overviews and status updates. Individual patient profile information will not be discussed in open sessions.

### **VII. MEETINGS**

An initial organizational meeting will be convened in person at Degge's office in Fairfax, Virginia. Representatives of Sanofi will provide participants with an overview of the Dronedarone history and current overall program. Degge will present the Study Protocol.

Panel members will be given the opportunity to familiarize themselves with all aspects of the observational study protocol and may ask any questions or concerns. A briefing binder of selected materials will be provided to Panel members to facilitate the discussions.

### **VIII. VOTING**

Since the Panel is small, all Panel members are required to be present in person or by telephone for a quorum, if a vote is to be cast. Decisions are based upon unanimous agreement. The Chairperson will not vote. There will be discussion only if a decision is not unanimous and decision is based upon a simple majority.

## **IX. DECISIONS OF THE INDEPENDENT ADJUDICATION PANEL**

The IAP is charged with determining whether interstitial lung disease outcome events are true cases as defined in the latest version of the Epidemiology Study Protocol. The specific procedures for adjudication are in **Attachment 1**.

## **X. MEETING MINUTES**

The Chair shall prepare minutes from the Panel meetings. To assist the Chair in this responsibility, a Degge staff member shall be designated by the Chair to take minutes during each meeting. The Chair shall edit these minutes and distribute to the other Panel members, Sanofi, and data partners within two weeks of the meeting. The minutes shall be approved by the Panel by email as well as during the following meeting to accurately reflect the Panel's opinions and conclusions regarding all reviewed issues.

## **XI. CONFIDENTIALITY**

All Panel members have agreed to and are bound by Confidentiality Agreements. All materials and information relating to this Panel shall be maintained strictly confidential pursuant to Degge's confidentiality agreement.

## **XII. SUNSHINE ACT REPORTING**

Federal law requires that pharmaceutical companies fully capture all transfers of value made to any covered US licensed health care provider (physicians, nurse practitioners, nurses, hospitals, clinics, PBMs, health insurance carriers, etc.). As such, Degge is responsible for reporting to Sanofi any and all financial payments made to Panel members, who are active licensed physicians, for their participation while serving on the Panel.

## ATTACHMENT 1. PATIENT PROFILE REVIEW & ADJUDICATION PROCEDURES

### Serious Liver Injury And Interstitial Lung Disease Occurrences In Patients Diagnosed With Atrial Fibrillation Treated With Selected Anti-Arrhythmics (DRONE\_C\_05917)

#### Independent Adjudication Panels

The Independent Adjudication Panels have been created to review and adjudicate potential cases identified in each of the study databases as described in the current *Study Protocol*.

#### I. Potential Case Identification

##### A. "Case" definition

A "Case" is defined as a patient who has an occurrence of outcome event code after the index date.

##### B. Review Cases identified via Selection Algorithm

A selection algorithm was developed to identify potential outcome events in patients that are in the cohort study conducted in the US DoD and HealthCore Integrated Research Database (HIRD™) databases. Patient Profiles of the potential cases will be provided to the IAP for outcome event adjudication and determination as defined in the study protocol.

##### C. Patient Profile Creation

Specifications on the layout of the Patient Profile will be provided to the analytic groups (Degge & HealthCore) involved in generating the profiles.

##### D. Receipt of Patient Profiles from Data Vendor

1. Patient profiles of potential cases will be provided to a Degge staff person in electronic format that is password protected.
2. The profile IDs and adjudicated status will be recorded in a tracking spreadsheet.

##### E. Storage of Patient Profiles

The creation and distribution of patient profile data from the US DoD and HIRD will adhere to Degge's Data Protection Policy, see **Attachment 2**. Copies are not provided to representatives of the sponsor, Sanofi, at any time.

##### F. IAP Review

The Panel, including the Chair, will be blinded to:

1. Study database, and
2. Study drugs of interest.

## II. Patient Profile Review

### A. Initial Review

1. Staff Screening/Verification – Degge staff will review all profiles to:
  - a. Record potential case information in outcome event tracking spreadsheet,
  - b. Assure study database name and study drugs of interest have been blinded,
  - c. Determine that a study outcome is present,
  - d. Attach corresponding event review form with event definitions.

### B. Adjudication / Reconciliation Review Process

1. All Panel members will familiarize themselves with the Protocol and the outcome event definitions to facilitate decisions.
2. Assignment of Cases. Depending on the number of potential cases to review, the IAP may meet face-to-face for 1 or 2 full days, or review password protected electronic files containing a large number of cases.
3. Each Panel member will initially review potential cases independently:
  - a. To determine based upon the characteristics and timing relative to the blinded study drug's exposure, whether the designated lung event suggests an interstitial lung disease outcome event as defined in the Study Protocol, and based on good clinical judgment. Event determination includes assignment as either:
    - “Yes” – the information provided meets the outcome event criteria,
    - “No” – the information provided does not meet the outcome event criteria, or
    - “Indeterminate” – the information provided does not meet the outcome event criteria, as defined in the study protocol, but the clinical picture suggests an outcome event.
4. Outcome Event Tabulation and Reconciliation:
  - a. Reviewer decisions will be tabulated for each case.
    - i. Cases with unanimous Reviewer agreement will have that determination assigned in the database. No further discussion will be needed.
    - ii. If disagreement between the Panel members exists, the patient profile will be discussed in a formal meeting where all three Panel members and the Chair are present. The Chair will lead the discussion. Panel members will each present reasoning for their decision, followed by a final vote. If a consensus is reached, that determination will be assigned in the database; else the event will be assigned as “Indeterminate”.

### C. Reporting Outcome Events back to Study Databases

Upon the IAP's completed review of all potential events, the final event determination will be provided back to the respective study databases to continue the study analyses.

More detailed procedures and forms to facilitate decision-making may be developed in the first reviews of actual cases.

## ATTACHMENT 2: DATA PROTECTION POLICY – PROJECT SPECIFIC

**Project:** Sanofi: Dronedarone Surveillance Study      **Project #:** 0204-110  
**Location:** The Degge Group, Ltd. office only  
**Required:** Restricted Access – Fixed Storage Media  
**PM:** Earl Goehring, Managing Director, Research

### I. Restricted Access – Fixed Storage Media

1. Physical access to profile data will be restricted to authorized persons by the following:
  - a. All non-removable or (re-)writable storage media with profile data will be configured with file systems that support access control. These include:
    - i. Password protection of all devices storing profile data.
    - ii. Data files will have robust security settings in place managed by Earl Goehring, including password protection, strict management of “read-only” and “write-only” authors (e.g., Microsoft Office files Advanced Properties setting for Security & Protection).
  - b. System administrators will not be able to access files because they will not be saved on a shared network.
2. Access to devices with profile data will be logged.
3. Back-up
  - a. Back-up media will be secured from access by unauthorized persons.
4. System Changes & Management
  - a. Connections to services running on the host computer while the device with profile data are active will be limited to only the authorized users of the service.
  - b. Software firewalls, hardware firewalls, and service configuration will be in place.
5. Computer Virus Protection
  - a. Anti-virus and anti-spyware software will be installed and enabled for all computers/devices with profile data, and configured for daily scanning.
  - b. Integrity checking of devices with profile data will be conducted every 30 days.
6. There will only be two (2) copies of the storage device file containing the data – one copy will be on a secure device at Degge containing profile data for both US DoD and HIRD; HealthCore (Scott Quinlan) will maintain copies of the HIRD profile data.
  - a. Both storage devices will be encrypted and password protected to prevent unauthorized access.
7. All copies of the profile data will be destroyed according to a timeframe determined in collaboration with Sanofi. Data destruction will occur in the following ways:
  - a. For data provided on either CD-ROM or DVD will be shredded; and
  - b. Electronically shredded via “File Shredder” software. Software contains five options for shredding algorithms, ranging from simple one pass to DoD 5220-22.M to Guttman algorithm with 35 passes.

**ILD ADJUDICATION PANEL REVIEW FORM**

***INTERSTITIAL LUNG DISEASE-NARROW DEFINITION***

## ADJUDICATION REVIEW FORM: INTERSTITIAL LUNG DISEASE-NARROW

Reviewer: \_\_\_\_\_

Review Batch #: ILD-N Batch #

Pt ID#: ILD- Gender: M / F Age:      Index Date:      /      /      Event:      /      /     

**Instructions:** Please review the Patient Profile and **determine, based upon the characteristics and timing of the outcome event relative to the blinded study drug exposures, whether the lung event identified in bold red text suggests an interstitial lung disease outcome event** as defined in the Study Protocol (definition provided on other side) and based on good clinical judgment.

**Please indicate “Yes”, “No”, or “Indeterminate”, and explain your decision.**

☐

**Yes. State your reasoning.**

## ADJUDICATION REVIEW FORM: INTERSTITIAL LUNG DISEASE-NARROW

Patients were selected for review based on hospitalized occurrences of selected interstitial lung disease-narrow codes as defined in the study protocol, occurring after a patient's index date. The selection algorithm is provided below.

**Occurrence must be the primary discharge diagnosis code.**

| ICD-9-CM Code | Description                                                      |
|---------------|------------------------------------------------------------------|
| 515           | Post-inflammatory pulmonary fibrosis                             |
| 516.3         | Idiopathic fibrosing alveolitis                                  |
| 516.30        | Idiopathic interstitial pneumonia, not otherwise specified (IIP) |
| 516.31        | Idiopathic pulmonary fibrosis (IPF)                              |
| 516.32        | Idiopathic non-specific interstitial pneumonitis (NSIP)          |
| 516.33        | Acute interstitial pneumonitis (AIP)                             |
| 516.34        | Respiratory bronchiolitis interstitial lung disease (RB-ILD)     |
| 516.35        | Idiopathic lymphoid interstitial pneumonia (LIP)                 |
| 516.36        | Cryptogenic organizing pneumonia (COP)                           |
| 516.37        | Desquamative interstitial pneumonia (DIP)                        |
| 516.8         | Other specified alveolar and parietoalveolar pneumonopathies     |
| 516.9         | Unspecified alveolar and parietoalveolar pneumonopathy           |

Patient ID: ILD-0088

## PATIENT PROFILE LAYOUT

**Header information - this information lists the Patient ID, gender, age at index date, Index Date, and date of suspected outcome event.**

| Patient ID #      | Age:                               | Gender:        | Index Date:              | Event Date:                                                        | Date of Death: |
|-------------------|------------------------------------|----------------|--------------------------|--------------------------------------------------------------------|----------------|
| De-identified ID# | Patient's age as of the Index Date | Male or Female | Date of Index Study Drug | First occurrence after the index date of a suspected outcome event | Date of Death  |

**Patient's Medical History - medical/pharmacy encounter data is laid out in chronological order by the services rendered, oldest records appearing at the beginning and recent records at the bottom.**

| Line # | Time from Index | Date of Service/ Admit Date | Discharge Date | Code Type | Code | POS | Provider Specialty | Seq # | Code Description | Medication Name | Days Supply | QTY | Drug Formulation | Source | Record # |
|--------|-----------------|-----------------------------|----------------|-----------|------|-----|--------------------|-------|------------------|-----------------|-------------|-----|------------------|--------|----------|
|--------|-----------------|-----------------------------|----------------|-----------|------|-----|--------------------|-------|------------------|-----------------|-------------|-----|------------------|--------|----------|

### Column definitions:

|                              |                                                                                                                                                                                                                                                                    |
|------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Line #                       | Sequential line number beginning with "1"                                                                                                                                                                                                                          |
| Time from Index              | Displays the number of days prior to the index date (e.g., -180, 180 days prior to the index date); and the number of days after the index date (e.g., 240)                                                                                                        |
| Date of Service / Admit Date | Contains the date of service for medical and pharmacy transactions. For inpatient stays, this date is the admission date.                                                                                                                                          |
| Discharge Date               | For code type=DX, PX, and CPT this date is the inpatient discharge date for inpatient stays.                                                                                                                                                                       |
| Code Type                    | Identifies the type of service transaction: <b>DX</b> = ICD-9-CM diagnosis code; <b>PX</b> = ICD-9-CM procedure code, CPT code, or HCPCS code; <b>RX</b> = Medication                                                                                              |
| Code                         | Actual code value reported for that transaction. For example, ICD-9-CM diagnosis/procedure codes, CPT codes, National Drug Codes (NDC)                                                                                                                             |
| POS                          | Place of Treatment (Services): Inpt (Hospital inpatient) indicates services that were performed at an inpatient hospital setting.                                                                                                                                  |
| Provider Specialty           | See Provider Specialty Codes Tabs for definitions                                                                                                                                                                                                                  |

## APPENDIX 4. EXCLUSIONARY CONDITIONS DEFINITIONS

### History of Cancer

#### ICD-9-CM Diagnosis Range

140 – 209.xx Cancer

V10.x Personal history of malignant neoplasms

---

### History of Organ Transplant

#### ICD-9-CM Diagnoses

996.81 Complications of a transplanted kidney  
996.82 Complications of a transplanted liver  
996.83 Complications of a transplanted heart  
996.84 Complications of a transplanted lung  
996.86 Complications of a transplanted pancreas  
V42.0x Transplant – Kidney, status post  
V42.1x Transplant – Heart  
V42.6x Transplant – Lung  
V42.7x Transplant – Liver  
V42.83 Pancreas replaced by transplant

#### ICD-9-CM Procedures

33.5 Lung transplant  
33.50 Lung transplantation, not otherwise specified  
33.51 Unilateral lung transplantation  
33.52 Bilateral lung transplantation  
33.6 Combined heart-lung transplantation  
37.51 Heart transplantation  
37.55 Removal of internal biventricular heart replacement system  
50.11 Closed (percutaneous) [needle] biopsy of liver  
50.12 Open biopsy of liver  
50.13 Transjugular liver biopsy  
50.14 Laparoscopic liver biopsy  
50.5 Liver transplant  
50.51 Auxiliary liver transplant  
50.59 Other transplant of liver  
50.91 Percutaneous aspiration of liver  
52.8 Transplant of pancreas  
52.80 Pancreatic transplant, not otherwise specified  
52.81 Reimplantation of pancreatic tissue  
52.82 Homotransplant of pancreas  
52.83 Heterotransplant of pancreas  
52.84 Autotransplantation of cells of islets of langerhans  
52.85 Allotransplantation of cells of islets of langerhans  
52.86 Transplantation of cells of islets of langerhans, not otherwise specified  
55.53 Removal transplant/rejected kidney  
55.69 Other kidney transplantation

#### CPT® Procedures

32851 Lung transplant, single; without cardiopulmonary bypass  
32852 Lung transplant, single; with cardiopulmonary bypass

|       |                                                                                                          |
|-------|----------------------------------------------------------------------------------------------------------|
| 32853 | Lung transplant, double (bilateral sequential or en bloc); without cardiopulmonary bypass                |
| 32854 | Lung transplant, double (bilateral sequential or en bloc); with cardiopulmonary bypass                   |
| 33935 | Heart-lung transplant with recipient cardiectomy-pneumonectomy                                           |
| 33945 | Heart transplant, with or without recipient cardiectomy                                                  |
| 47135 | Liver allotransplantation; orthotopic, partial or whole, from cadaver or living donor, any age           |
| 47136 | Liver allotransplantation; heterotopic, partial or whole, from cadaver or living donor, any age          |
| 48160 | Pancreatectomy, total or subtotal, with autologous transplantation of pancreas or pancreatic islet cells |
| 48554 | Transplantation of pancreatic allograft                                                                  |
| 48556 | Removal of transplanted pancreatic allograft                                                             |
| 50360 | Renal allotransplantation, implantation of graft; without recipient nephrectomy                          |
| 50365 | Renal allotransplantation, implantation of graft; with recipient nephrectomy                             |
| 50370 | Removal of transplanted renal allograft                                                                  |
| 50380 | Renal autotransplantation, reimplantation of kidney                                                      |

## History of Pregnancy (Index date minus 280 days, through index date minus 1)

### ICD-9-CM Diagnoses

|        |                                                                                                 |
|--------|-------------------------------------------------------------------------------------------------|
| V22    | Normal pregnancy                                                                                |
| V22.0  | Supervision of normal first pregnancy                                                           |
| V22.1  | Supervision of other normal pregnancy                                                           |
| V22.2  | Pregnant state incidental                                                                       |
| V23    | Supervision of high-risk pregnancy                                                              |
| V23.0  | Supervision of high-risk pregnancy with history of infertility                                  |
| V23.1  | Supervision of high-risk pregnancy with history of trophoblastic disease                        |
| V23.2  | Supervision of high-risk pregnancy with history of abortion                                     |
| V23.3  | Supervision of high-risk pregnancy with grand multiparity                                       |
| V23.4  | Supervision of high-risk pregnancy with other poor obstetric history                            |
| V23.41 | Supervision of high-risk pregnancy with history of pre-term labor                               |
| V23.42 | Supervision of high-risk pregnancy with history of ectopic pregnancy                            |
| V23.49 | Supervision of high-risk pregnancy with other poor obstetric history                            |
| V23.5  | Supervision of high-risk pregnancy with other poor reproductive history                         |
| V23.7  | Supervision of high-risk pregnancy with insufficient prenatal care                              |
| V23.8  | Supervision of other high-risk pregnancy                                                        |
| V23.81 | Supervision of high-risk pregnancy with elderly primigravida                                    |
| V23.82 | Supervision of high-risk pregnancy with elderly multigravida                                    |
| V23.83 | Supervision of high-risk pregnancy with young primigravida                                      |
| V23.84 | Supervision of high-risk pregnancy with young multigravida                                      |
| V23.85 | Supervision of high-risk pregnancy resulting from assisted reproductive technology              |
| V23.86 | Supervision of high-risk pregnancy with history of in utero procedure during previous pregnancy |
| V23.87 | Supervision of high-risk pregnancy with inconclusive fetal viability                            |

- V23.89 Supervision of other high-risk pregnancy
- V23.9 Supervision of unspecified high-risk pregnancy
- V28 Encounter for antenatal screening of mother
- V28.0 Screening for chromosomal anomalies by amniocentesis
- V28.1 Screening for raised alpha-fetoprotein levels in amniotic fluid
- V28.2 Other antenatal screening based on amniocentesis
- V28.3 Encounter for routine screening for malformation using ultrasonics
- V28.4 Antenatal screening for fetal growth retardation using ultrasonics
- V28.5 Antenatal screening for isoimmunization
- V28.6 Antenatal screening for streptococcus b
- V28.8 Other specified antenatal screening
- V28.81 Encounter for fetal anatomic survey
- V28.82 Encounter for screening for risk of preterm labor
- V28.89 Other specified antenatal screening
- V28.9 Unspecified antenatal screening

### **ICD-9-CM Procedures**

- 72 Forceps, vacuum, and breech delivery
- 72.0 Low forceps operation
- 72.1 Low forceps operation with episiotomy
- 72.2 Mid forceps operation
- 72.21 Mid forceps operation with episiotomy
- 72.29 Other mid forceps operation
- 72.3 High forceps operation
- 72.31 High forceps operation with episiotomy
- 72.39 Other high forceps operation
- 72.4 Forceps rotation of fetal head
- 72.5 Breech extraction
- 72.51 Partial breech extraction with forceps to aftercoming head
- 72.52 Other partial breech extraction
- 72.53 Total breech extraction with forceps to aftercoming head
- 72.54 Other total breech extraction
- 72.6 Forceps application to aftercoming head
- 72.7 Vacuum extraction
- 72.71 Vacuum extraction with episiotomy
- 72.79 Other vacuum extraction
- 72.8 Other specified instrumental delivery
- 72.9 Unspecified instrumental delivery
- 73 Other procedures inducing or assisting delivery
- 73.0 Artificial rupture of membranes
- 73.01 Induction of labor by artificial rupture of membranes
- 73.09 Other artificial rupture of membranes
- 73.1 Other surgical induction of labor
- 73.2 Internal and combined version and extraction
- 73.21 Internal and combined version without extraction
- 73.22 Internal and combined version with extraction
- 73.3 Failed forceps
- 73.4 Medical induction of labor
- 73.5 Manually assisted delivery
- 73.51 Manual rotation of fetal head
- 73.59 Other manually assisted delivery
- 73.6 Episiotomy
- 73.8 Operations on fetus to facilitate delivery
- 73.9 Other operations assisting delivery
- 73.91 External version assisting delivery

- 73.92 Replacement of prolapsed umbilical cord
- 73.93 Incision of cervix to assist delivery
- 73.94 Pubiotomy to assist delivery
- 73.99 Other operations assisting delivery
- 74 Cesarean section and removal of fetus
- 74.0 Classical cesarean section
- 74.1 Low cervical cesarean section
- 74.2 Extraperitoneal cesarean section
- 74.3 Removal of extratubal ectopic pregnancy
- 74.4 Cesarean section of other specified type
- 74.9 Cesarean section of unspecified type
- 74.91 Hysterotomy to terminate pregnancy
- 74.99 Other cesarean section of unspecified type
- 75 Other obstetric operations
- 75.0 Intra-amniotic injection for abortion
- 75.1 Diagnostic amniocentesis
- 75.2 Intrauterine transfusion
- 75.3 Other intrauterine operations on fetus and amnion
- 75.31 Amnioscopy
- 75.32 Fetal ekg (scalp)
- 75.33 Fetal blood sampling and biopsy
- 75.34 Other fetal monitoring
- 75.35 Other diagnostic procedures on fetus and amnion
- 75.36 Correction of fetal defect
- 75.37 Amnioinfusion
- 75.38 Fetal pulse oximetry

## APPENDIX 5. SERIOUS LIVER INJURY/DISEASE BASELINE EXCLUSIONARY SCREENING

### ICD-9-CM Diagnosis and Procedure Codes / CPT Code Descriptions

#### History of Serious Liver Injury/Disease

##### ICD-9-CM Diagnoses

- 277.4 Disorders of bilirubin excretion
- 570 Acute and subacute necrosis of liver
- 571.5 Cirrhosis of liver without mention of alcohol
- 572.2 Hepatic coma
- 572.4 Hepatorenal syndrome
- 572.8 Other sequelae of chronic liver disease\*
- 573.0 Chronic passive congestion of liver
- 573.3 Hepatitis, unspecified
- 573.8 Other specified disorders of liver
- 573.9 Unspecified disorder of liver
- 782.4 Jaundice, unspecified
- 794.8 Nonspecific abnormal results of liver function test
- V42.7 Liver replaced by transplant

##### ICD-9-CM Procedures

- 50.11 Closed (percutaneous) [needle] biopsy of liver
- 50.12 Open biopsy of liver
- 50.13 Transjugular liver biopsy
- 50.14 Laparoscopic liver biopsy
- 50.5 Liver transplant
- 50.51 Auxiliary liver transplant
- 50.59 Other transplant of liver
- 50.91 Percutaneous aspiration of liver

##### CPT® Procedures

- 47000 Biopsy of liver, needle; percutaneous
  - 47001 Biopsy of liver, needle; done at time of other major procedure
  - 47100 Biopsy of liver, wedge
  - 47135 Liver allotransplantation; orthotopic, partial or whole
  - 47136 Liver allotransplantation; heterotopic, partial or whole
  - 78205 Liver imaging (SPECT)
  - 78206 Liver imaging (SPECT); with vascular flow
-

## **History of Viral Hepatitis**

### **ICD-9-CM Diagnoses**

070.0 Viral Hepatitis A With Hepatic Coma  
070.1 Viral Hepatitis A Without Hepatic Coma  
070.2 Viral Hepatitis B With Hepatic Coma  
070.20 Viral Hepatitis B With Hepatic Coma Acute Or Unspecified Without Hepatitis Delta  
070.21 Viral Hepatitis B With Hepatic Coma Acute Or Unspecified With Hepatitis Delta  
070.22 Chronic Viral Hepatitis B With Hepatic Coma Without Hepatitis Delta  
070.23 Chronic Viral Hepatitis B With Hepatic Coma With Hepatitis Delta  
070.3 Viral Hepatitis B Without Mention Of Hepatic Coma  
070.30 Viral Hepatitis B Without Hepatic Coma Acute Or Unspecified Without Hepatitis Delta  
070.31 Viral Hepatitis B Without Hepatic Coma Acute Or Unspecified With Hepatitis Delta  
070.32 Chronic Viral Hepatitis B Without Hepatic Coma Without Hepatitis Delta  
070.33 Chronic Viral Hepatitis B Without Hepatic Coma With Hepatitis Delta  
070.4 Other Specified Viral Hepatitis With Hepatic Coma  
070.41 Acute Hepatitis C With Hepatic Coma  
070.42 Hepatitis Delta Without Active Hepatitis B Disease With Hepatic Coma  
070.43 Hepatitis E With Hepatic Coma  
070.44 Chronic Hepatitis C With Hepatic Coma  
070.49 Other Specified Viral Hepatitis With Hepatic Coma  
070.5 Other Specified Viral Hepatitis Without Mention Of Hepatic Coma  
070.51 Acute Hepatitis C Without Mention Of Hepatic Coma  
070.52 Hepatitis Delta Without Active Hepatitis B Disease Or Hepatic Coma  
070.53 Hepatitis E Without Hepatic Coma  
070.54 Chronic Hepatitis C Without Hepatic Coma  
070.59 Other Specified Viral Hepatitis Without Hepatic Coma  
070.7 Unspecified Viral Hepatitis C  
070.70 Unspecified Viral Hepatitis C Without Hepatic Coma  
070.71 Unspecified Viral Hepatitis C With Hepatic Coma  
V02.61 Carrier Or Suspected Carrier Of Hepatitis B  
V02.62 Carrier Or Suspected Carrier Of Hepatitis C

---

## **Non-Specific – Other Related Hepatitis**

### **ICD-9-CM Diagnoses**

070.6 Unspecified Viral Hepatitis With Hepatic Coma  
070.9 Unspecified Viral Hepatitis Without Hepatic Coma  
072.71 Mumps Hepatitis  
091.62 Secondary Syphilitic Hepatitis  
571.4 Chronic Hepatitis  
571.40 Chronic Hepatitis, Unspecified  
571.41 Chronic Persistent Hepatitis  
571.42 Autoimmune Hepatitis  
571.49 Other Chronic Hepatitis  
571.8 Other Chronic Nonalcoholic Liver Disease

572.0 Abscess of Liver  
V02.6 Carrier Or Suspected Carrier Of Viral Hepatitis  
V02.60 Carrier Or Suspected Carrier Of Viral Hepatitis Unspecified  
V02.69 Carrier Or Suspected Carrier Of Other Viral Hepatitis

---

### **History of Hereditary Conditions**

#### **ICD-9-CM Diagnoses**

271.0 Glycogenosis  
271.1 Galactosemia  
273.4 Alpha-1-Antitrypsin Deficiency  
275.0 Disorders Of Iron Metabolism  
275.01 Hereditary Hemochromatosis  
275.03 Other Hemochromatosis  
275.1 Disorders Of Copper Metabolism  
759.89 Other Specified Congenital Anomalies (Alagille syndrome)

---

End

## **APPENDIX 6. INTERSTITIAL LUNG DISEASE - NARROW DEFINITION; BASELINE EXCLUSIONARY SCREENING**

### **ICD-9-CM Code Descriptions**

#### **History of Interstitial Lung Disease**

- 515 Post-inflammatory pulmonary fibrosis
  - 516.3 Idiopathic fibrosing alveolitis
  - 516.30 Idiopathic interstitial pneumonia, not otherwise specified (IIP)
  - 516.31 Idiopathic pulmonary fibrosis (IPF)
  - 516.32 Idiopathic non-specific interstitial pneumonitis (NSIP)
  - 516.33 Acute interstitial pneumonitis (AIP)
  - 516.34 Respiratory bronchiolitis interstitial lung disease (RB-ILD)
  - 516.35 Idiopathic lymphoid interstitial pneumonia (LIP)
  - 516.36 Cryptogenic organizing pneumonia (COP)
  - 516.37 Desquamative interstitial pneumonia (DIP)
  - 516.8 Other specified alveolar and parietoalveolar pneumonopathies
  - 516.9 Unspecified alveolar and parietoalveolar pneumonopathy
- 

#### **History of Pneumonia**

- 480 Viral Pneumonia
- 480.0 Pneumonia Due To Adenovirus
- 480.1 Pneumonia Due To Respiratory Syncytial Virus
- 480.2 Pneumonia Due To Parainfluenza Virus
- 480.3 Pneumonia Due To Sars-Associated Coronavirus
- 480.8 Pneumonia Due To Other Virus Not Elsewhere Classified
- 480.9 Viral Pneumonia Unspecified
- 481 Pneumococcal Pneumonia [Streptococcus Pneumoniae Pneumonia]
- 482 Other Bacterial Pneumonia
- 482.0 Pneumonia Due To Klebsiella Pneumoniae
- 482.1 Pneumonia Due To Pseudomonas
- 482.2 Pneumonia Due To Hemophilus Influenzae (H. Influenzae)
- 482.3 Pneumonia Due To Streptococcus
- 482.30 Pneumonia Due To Streptococcus Unspecified
- 482.31 Pneumonia Due To Streptococcus Group A
- 482.32 Pneumonia Due To Streptococcus Group B
- 482.39 Pneumonia Due To Other Streptococcus
- 482.4 Pneumonia Due To Staphylococcus
- 482.40 Pneumonia Due To Staphylococcus Unspecified
- 482.41 Methicillin Susceptible Pneumonia Due To Staphylococcus Aureus
- 482.42 Methicillin Resistant Pneumonia Due To Staphylococcus Aureus
- 482.49 Other Staphylococcus Pneumonia
- 482.8 Pneumonia Due To Other Specified Bacteria
- 482.81 Pneumonia Due To Anaerobes
- 482.82 Pneumonia Due To Escherichia Coli [E.Coli]
- 482.83 Pneumonia Due To Other Gram-Negative Bacteria

482.84 Pneumonia Due To Legionnaires' Disease  
482.89 Pneumonia Due To Other Specified Bacteria  
482.9 Bacterial Pneumonia Unspecified  
483.8 Pneumonia Due To Other Specified Organism  
485 Bronchopneumonia Organism Unspecified  
486 Pneumonia Organism Unspecified  
487.0 Influenza With Pneumonia  
507.0 Pneumonitis due to inhalation of food or vomitus  
V12.61 Personal History Of Pneumonia (Recurrent)

---

## **History of Sarcoidosis**

135 Sarcoidosis

## APPENDIX 7. TREATMENT EPISODE AND FOLLOW-UP IDENTIFICATION PERIOD

Figure 1. SLD Index Treatment Episode / Follow-up Period Examples

**Figure 2. Identifying Patients with Suspected ILD Outcome Events during ILD Risk Period 1 for Adjudication**

## APPENDIX 8. SERIOUS LIVER INJURY/DISEASE OUTCOME EVENT DEFINITION

### ICD-9-CM Diagnosis and Procedure Codes / CPT Code Descriptions

#### **ICD-9-CM Diagnoses**

|       |                                                     |
|-------|-----------------------------------------------------|
| 277.4 | Disorders of bilirubin excretion                    |
| 570   | Acute and subacute necrosis of liver                |
| 571.5 | Cirrhosis of liver without mention of alcohol       |
| 572.2 | Hepatic coma                                        |
| 572.4 | Hepatorenal syndrome                                |
| 572.8 | Other sequelae of chronic liver disease*            |
| 573.0 | Chronic passive congestion of liver                 |
| 573.3 | Hepatitis, unspecified                              |
| 573.8 | Other specified disorders of liver                  |
| 573.9 | Unspecified disorder of liver                       |
| 782.4 | Jaundice, unspecified                               |
| 794.8 | Nonspecific abnormal results of liver function test |
| V42.7 | Liver replaced by transplant                        |

#### **ICD-9-CM Procedures**

|       |                                                |
|-------|------------------------------------------------|
| 50.11 | Closed (percutaneous) [needle] biopsy of liver |
| 50.12 | Open biopsy of liver                           |
| 50.13 | Transjugular liver biopsy                      |
| 50.14 | Laparoscopic liver biopsy                      |
| 50.5  | Liver transplant                               |
| 50.51 | Auxiliary liver transplant                     |
| 50.59 | Other transplant of liver                      |
| 50.91 | Percutaneous aspiration of liver               |

#### **CPT® Procedures**

|       |                                                                |
|-------|----------------------------------------------------------------|
| 47000 | Biopsy of liver, needle; percutaneous                          |
| 47001 | Biopsy of liver, needle; done at time of other major procedure |
| 47100 | Biopsy of liver, wedge                                         |
| 47135 | Liver allotransplantation; orthotopic, partial or whole        |
| 47136 | Liver allotransplantation; heterotopic, partial or whole       |
| 78205 | Liver imaging (SPECT)                                          |
| 78206 | Liver imaging (SPECT); with vascular flow                      |

---

\* Approved for definition inclusion on October 22, 2013 by Epi Steering Committee.

Also approved for removal from the definition were two diagnosis codes:

789.1 Hepatomegaly, and  
791.4 Biliuria

## SLD OUTCOME EVENT DEFINITION - GROUP A CODES

### Group A Codes (usually reflects Liver Injury/Disease)

#### ICD-9-CM Diagnosis and Procedure Codes / CPT Code Descriptions

##### **ICD-9-CM Diagnosis** (may occur in any code position; inpatient setting):

570 Acute and subacute necrosis of liver  
572.2 Hepatic coma  
572.4 Hepatorenal syndrome  
V42.7 Liver replaced by transplant

##### **ICD-9-CM Procedures** (may occur in any code position; inpatient setting):

50.5 Liver transplant  
50.51 Auxiliary liver transplant  
50.59 Other transplant of liver

##### **CPT®** (may occur in any code position; inpatient setting):

47135 Liver allotransplantation; orthotopic, partial or whole  
47136 Liver allotransplantation; heterotopic, partial or whole

---

## SLD OUTCOME EVENT DEFINITION - GROUP B CODES

### Group B Codes (highly suspicious, suggestive of Liver Injury/Disease)

#### ICD-9-CM Diagnosis and Procedure Codes / CPT Code Descriptions

**ICD-9-CM Diagnosis** (diagnosis must be an inpatient primary discharge diagnosis):

|       |                                                     |
|-------|-----------------------------------------------------|
| 277.4 | Disorders of bilirubin excretion                    |
| 571.5 | Cirrhosis of liver without mention of alcohol       |
| 572.8 | Other sequelae of chronic liver disease*            |
| 573.0 | Chronic passive congestion of liver                 |
| 573.3 | Hepatitis, unspecified                              |
| 573.8 | Other specified disorders of liver                  |
| 573.9 | Unspecified disorder of liver                       |
| 782.4 | Jaundice, unspecified                               |
| 794.8 | Nonspecific abnormal results of liver function test |

**ICD-9-CM Procedures** (may occur in any code position; inpatient setting):

|       |                                                |
|-------|------------------------------------------------|
| 50.11 | Closed (percutaneous) [needle] biopsy of liver |
| 50.12 | Open biopsy of liver                           |
| 50.13 | Transjugular liver biopsy                      |
| 50.14 | Laparoscopic liver biopsy                      |
| 50.91 | Percutaneous aspiration of liver               |

**CPT®** (may occur in any code position; inpatient setting):

|       |                                                                |
|-------|----------------------------------------------------------------|
| 47000 | Biopsy of liver, needle; percutaneous                          |
| 47001 | Biopsy of liver, needle; done at time of other major procedure |
| 47100 | Biopsy of liver, wedge                                         |
| 78205 | Liver imaging (SPECT)                                          |
| 78206 | Liver imaging (SPECT); with vascular flow                      |

---

\* Approved for definition inclusion on October 22, 2013.

## ALGORITHM FOR SELECTION OF SLD OUTCOME EVENTS FOR ADJUDICATION

### A CODES

**ICD-9-CM Diagnosis (may occur in any code position; inpatient setting)**

570 Acute and subacute necrosis of liver  
 572.2 Hepatic coma  
 572.4 Hepatorenal syndrome  
 V42.7 Liver replaced by transplant

**ICD-9-CM Procedures (may occur in any code position; inpatient setting)**

50.5 Liver transplant  
 50.51 Auxiliary liver transplant  
 50.59 Other transplant of liver

**CPT (may occur in any code position; inpatient setting)**

47135 Liver allotransplantation; orthotopic, partial or whole  
 47136 Liver allotransplantation; heterotopic, partial or whole

### B CODES

**ICD-9-CM Diagnosis (must be a primary discharge diagnosis)**

277.4 Disorders of bilirubin excretion  
 571.5 Cirrhosis of liver without mention of alcohol  
 572.8 Other sequelae of chronic liver disease  
 573.0 Chronic passive congestion of liver  
 573.3 Hepatitis, unspecified  
 573.8 Other specified disorders of liver  
 573.9 Unspecified disorder of liver  
 782.4 Jaundice, unspecified  
 794.8 Nonspecific abnormal results of liver function test

**ICD-9-CM Procedures (may occur in any code position; inpatient setting)**

50.11 Closed (percutaneous) [needle] biopsy of liver  
 50.12 Open biopsy of liver  
 50.13 Transjugular liver biopsy  
 50.14 Laparoscopic liver biopsy  
 50.91 Percutaneous aspiration of liver

**CPT (may occur in any code position; inpatient setting)**

47000 Biopsy of liver, needle; percutaneous  
 47001 Biopsy of liver, needle; done at time of other major procedure  
 47100 Biopsy of liver, wedge  
 78205 Liver imaging (SPECT)  
 78206 Liver imaging (SPECT); with vascular flow

## APPENDIX 9. ILD OUTCOME EVENT - NARROW DEFINITION

### ICD-9-CM Diagnosis Codes (Codes must be an inpatient discharge diagnosis)

|        |                                                                  |
|--------|------------------------------------------------------------------|
| 515    | Post-inflammatory pulmonary fibrosis                             |
| 516.3  | Idiopathic fibrosing alveolitis                                  |
| 516.30 | Idiopathic interstitial pneumonia, not otherwise specified (IIP) |
| 516.31 | Idiopathic pulmonary fibrosis (IPF)                              |
| 516.32 | Idiopathic non-specific interstitial pneumonitis (NSIP)          |
| 516.33 | Acute interstitial pneumonitis (AIP)                             |
| 516.34 | Respiratory bronchiolitis interstitial lung disease (RB-ILD)     |
| 516.35 | Idiopathic lymphoid interstitial pneumonia (LIP)                 |
| 516.36 | Cryptogenic organizing pneumonia (COP)                           |
| 516.37 | Desquamative interstitial pneumonia (DIP)                        |
| 516.8  | Other specified alveolar and parietoalveolar pneumonopathies     |
| 516.9  | Unspecified alveolar and parietoalveolar pneumonopathy           |

---

## ALGORITHM FOR SELECTION OF SUSPECTED ILD (NARROW) OUTCOME EVENTS FOR ADJUDICATION

Code occurrence must be among the hospital discharge diagnoses.

### ICD-9-CM

| Code   | Description                                                      |
|--------|------------------------------------------------------------------|
| 515    | Post-inflammatory pulmonary fibrosis                             |
| 516.3  | Idiopathic fibrosing alveolitis                                  |
| 516.30 | Idiopathic interstitial pneumonia, not otherwise specified (IIP) |
| 516.31 | Idiopathic pulmonary fibrosis (IPF)                              |
| 516.32 | Idiopathic non-specific interstitial pneumonitis (NSIP)          |
| 516.33 | Acute interstitial pneumonitis (AIP)                             |
| 516.34 | Respiratory bronchiolitis interstitial lung disease (RB-ILD)     |
| 516.35 | Idiopathic lymphoid interstitial pneumonia (LIP)                 |
| 516.36 | Cryptogenic organizing pneumonia (COP)                           |
| 516.37 | Desquamative interstitial pneumonia (DIP)                        |
| 516.8  | Other specified alveolar and parietoalveolar pneumonopathies     |
| 516.9  | Unspecified alveolar and parietoalveolar pneumonopathy           |

## APPENDIX 10. LIVER INJURY/DISEASE - RISK FACTORS / CONFOUNDER DEFINITIONS

Codes to identify patients with pre-existing liver/biliary diseases, and chronic liver disease.

| ICD-9-CM | Diagnosis Code Description |
|----------|----------------------------|
|----------|----------------------------|

### History of Alcoholism

|       |                                    |
|-------|------------------------------------|
| 571.0 | Alcoholic Fatty Liver              |
| 571.1 | Acute Alcoholic Hepatitis          |
| 571.2 | Alcoholic Cirrhosis Of Liver       |
| 571.3 | Unspecified Alcoholic Liver Damage |

### History of Biliary Duct Disorders

|        |                                                                                      |
|--------|--------------------------------------------------------------------------------------|
| 574.00 | Calculus Of Gallbladder With Acute Cholecystitis Without Obstruction                 |
| 574.01 | Calculus Of Gallbladder With Acute Cholecystitis With Obstruction                    |
| 574.10 | Calculus Of Gallbladder With Other Cholecystitis Without Obstruction                 |
| 574.11 | Calculus Of Gallbladder With Other Cholecystitis With Obstruction                    |
| 574.20 | Calculus Of Gallbladder Without Cholecystitis Without Obstruction                    |
| 574.21 | Calculus Of Gallbladder Without Cholecystitis With Obstruction                       |
| 574.30 | Calculus Of Bile Duct With Acute Cholecystitis Without Obstruction                   |
| 574.31 | Calculus Of Bile Duct With Acute Cholecystitis With Obstruction                      |
| 574.40 | Calculus Of Bile Duct With Other Cholecystitis                                       |
| 574.41 | Calculus Of Bile Duct With Other Cholecystitis Without Obstruction                   |
| 574.50 | Calculus Of Bile Duct With Other Cholecystitis With Obstruction                      |
| 574.51 | Calculus Of Bile Duct Without Mention Of Cholecystitis                               |
| 574.60 | Calculus Of Bile Duct Without Cholecystitis Without Obstruction                      |
| 574.61 | Calculus Of Bile Duct Without Cholecystitis With Obstruction                         |
| 574.70 | Calculus Of Gallbladder And Bile Duct With Acute Cholecystitis                       |
| 574.71 | Calculus Of Gallbladder And Bile Duct With Other Cholecystitis, With Obstruction     |
| 574.80 | Calculus Of Gallbladder And Bile Duct W Acute& Chronic Cholecystitis W/o Obstruction |
| 574.81 | Calculus Of Gallbladder And Bile Duct W Acute & Chronic Cholecystitis W/Obstruction  |
| 574.90 | Calculus Of Gallbladder And Bile Duct Without Cholecystitis Without Obstruction      |
| 574.91 | Calculus Of Gallbladder And Bile Duct Without Cholecystitis With Obstruction         |
| 575.0  | Acute Cholecystitis                                                                  |
| 575.1  | Other Cholecystitis                                                                  |
| 575.10 | Cholecystitis Unspecified                                                            |
| 575.11 | Chronic Cholecystitis                                                                |
| 575.12 | Acute And Chronic Cholecystitis                                                      |
| 575.2  | Obstruction Of Gallbladder                                                           |
| 575.3  | Hydrops Of Gallbladder                                                               |
| 575.4  | Perforation Of Gallbladder                                                           |
| 575.5  | Fistula Of Gallbladder                                                               |
| 575.6  | Cholesterolosis Of Gallbladder                                                       |
| 575.8  | Other Specified Disorders Of Gallbladder                                             |
| 575.9  | Unspecified Disorder Of Gallbladder                                                  |
| 576.1  | Cholangitis                                                                          |

### History of Congestive Heart Failure

|       |                                      |
|-------|--------------------------------------|
| 428   | Heart Failure                        |
| 428.0 | Congestive Heart Failure Unspecified |
| 428.1 | Left Heart Failure                   |

|        |                                                                |
|--------|----------------------------------------------------------------|
| 428.2  | Systolic Heart Failure                                         |
| 428.20 | Unspecified Systolic Heart Failure                             |
| 428.21 | Acute Systolic Heart Failure                                   |
| 428.22 | Chronic Systolic Heart Failure                                 |
| 428.23 | Acute On Chronic Systolic Heart Failure                        |
| 428.3  | Diastolic Heart Failure                                        |
| 428.30 | Unspecified Diastolic Heart Failure                            |
| 428.31 | Acute Diastolic Heart Failure                                  |
| 428.32 | Chronic Diastolic Heart Failure                                |
| 428.33 | Acute On Chronic Diastolic Heart Failure                       |
| 428.4  | Combined Systolic And Diastolic Heart Failure                  |
| 428.40 | Unspecified Combined Systolic And Diastolic Heart Failure      |
| 428.41 | Acute Combined Systolic And Diastolic Heart Failure            |
| 428.42 | Chronic Combined Systolic And Diastolic Heart Failure          |
| 428.43 | Acute On Chronic Combined Systolic And Diastolic Heart Failure |
| 428.9  | Heart Failure Unspecified                                      |

## APPENDIX 11. INTERSTITIAL LUNG DISEASE - RISK FACTORS / CONFOUNDER DEFINITIONS

Risk factors and confounders for ILD are defined by the following ICD-9-CM diagnosis/procedure codes, CPT, HCPCS codes, and/or medication name or NDCs.

### ICD-9-CM Code Descriptions

| <b>Asthma</b>     |                                                          |
|-------------------|----------------------------------------------------------|
| 493               | Asthma                                                   |
| 493.0             | Extrinsic Asthma                                         |
| 493.00            | Extrinsic Asthma Unspecified                             |
| 493.01            | Extrinsic Asthma With Status Asthmaticus                 |
| 493.02            | Extrinsic Asthma With (Acute) Exacerbation               |
| 493.1             | Intrinsic Asthma                                         |
| 493.10            | Intrinsic Asthma Unspecified                             |
| 493.11            | Intrinsic Asthma With Status Asthmaticus                 |
| 493.12            | Intrinsic Asthma With (Acute) Exacerbation               |
| 493.2             | Chronic Obstructive Asthma                               |
| 493.20            | Chronic Obstructive Asthma Unspecified                   |
| 493.21            | Chronic Obstructive Asthma With Status Asthmaticus       |
| 493.22            | Chronic Obstructive Asthma With (Acute) Exacerbation     |
| 493.8             | Other Specified Asthma                                   |
| 493.81            | Exercise-Induced Bronchospasm                            |
| 493.82            | Cough Variant Asthma                                     |
| 493.9             | Asthma Unspecified                                       |
| 493.90            | Asthma Unspecified                                       |
| 493.91            | Asthma Unspecified Type With Status Asthmaticus          |
| 493.92            | Asthma Unspecified With (Acute) Exacerbation             |
| <b>Bronchitis</b> |                                                          |
| 490               | Bronchitis Not Specified As Acute Or Chronic             |
| 491               | Chronic Bronchitis                                       |
| 491.0             | Simple Chronic Bronchitis                                |
| 491.1             | Mucopurulent Chronic Bronchitis                          |
| 491.2             | Obstructive Chronic Bronchitis                           |
| 491.20            | Obstructive Chronic Bronchitis Without Exacerbation      |
| 491.21            | Obstructive Chronic Bronchitis With (Acute) Exacerbation |
| 491.22            | Obstructive Chronic Bronchitis With Acute Bronchitis     |
| 491.8             | Other Chronic Bronchitis                                 |
| 491.9             | Unspecified Chronic Bronchitis                           |
| 494               | Bronchiectasis                                           |
| 494.0             | Bronchiectasis Without Acute Exacerbation                |
| 494.1             | Bronchiectasis With Acute Exacerbation                   |
| <b>COPD</b>       |                                                          |
| 496               | Chronic Airway Obstruction Not Elsewhere Classified      |

**Connective Tissue Disease**

|        |                                            |
|--------|--------------------------------------------|
| 136.1  | Behçet syndrome (very rare)                |
| 446.21 | Goodpasture syndrome                       |
| 710.0  | Systemic lupus erythematosus               |
| 710.1  | Systemic sclerosis                         |
| 710.2  | Sjögren syndrome                           |
| 710.3  | Dermatomyositis                            |
| 710.4  | Polymyositis                               |
| 710.8  | Mixed connective tissue disease            |
| 710.9  | Undifferentiated connective tissue disease |
| 714.xx | Rheumatoid arthritis                       |
| 720.0  | Ankylosing spondylitis (rare)              |

**Exposure to Occupational and Environmental Toxins**

|       |                                                                     |
|-------|---------------------------------------------------------------------|
| 495   | Extrinsic Allergic Alveolitis                                       |
| 495.0 | Farmers' Lung                                                       |
| 495.1 | Bagassosis                                                          |
| 495.2 | Bird-Fanciers' Lung                                                 |
| 495.3 | Suberosis                                                           |
| 495.4 | Malt Workers' Lung                                                  |
| 495.5 | Mushroom Workers' Lung                                              |
| 495.6 | Maple Bark-Strippers' Lung                                          |
| 495.7 | Ventilation Pneumonitis                                             |
| 495.8 | Other Specified Allergic Alveolitis And Pneumonitis                 |
| 495.9 | Unspecified Allergic Alveolitis And Pneumonitis                     |
| 500   | Coal Workers' Pneumoconiosis                                        |
| 501   | Asbestosis                                                          |
| 502   | Pneumoconiosis Due To Other Silica Or Silicates                     |
| 503   | Pneumoconiosis Due To Other Inorganic Dust                          |
| 504   | Pneumonopathy Due To Inhalation Of Other Dust                       |
| 505   | Pneumoconiosis Unspecified                                          |
| 506   | Respiratory Conditions Due To Chemical Fumes And Vapors             |
| 506.0 | Bronchitis And Pneumonitis Due To Fumes And Vapors                  |
| 506.1 | Acute Pulmonary Edema Due To Fumes And Vapors                       |
| 506.2 | Upper Respiratory Inflammation Due To Fumes And Vapors              |
| 506.3 | Other Acute And Subacute Resp Conditions Due To Fumes And Vapors    |
| 506.4 | Chronic Respiratory Conditions Due To Fumes And Vapors              |
| 506.9 | Unspecified Respiratory Conditions Due To Fumes And Vapors          |
| 507   | Pneumonitis Due To Solids And Liquids                               |
| 507.1 | Pneumonitis Due To Inhalation Of Oils And Essences                  |
| 507.8 | Pneumonitis Due To Other Solids And Liquids                         |
| 508   | Respiratory Conditions Due To Other And Unspecified External Agents |
| 508.0 | Acute Pulmonary Manifestations Due To Radiation                     |
| 508.1 | Chronic And Other Pulmonary Manifestations Due To Radiation         |
| 508.2 | Respiratory Conditions Due To Smoke Inhalation                      |
| 508.8 | Respiratory Conditions Due To Other Specified External Agents       |
| 508.9 | Respiratory Conditions Due To Unspecified External Agent            |

**Gastroesophageal Reflux Disease**

|        |                                 |
|--------|---------------------------------|
| 530.81 | Gastroesophageal reflux disease |
|--------|---------------------------------|

**Other Anti-arrhythmic Agents** (Therapeutic class # 240404\*)

|                                            |                             |
|--------------------------------------------|-----------------------------|
| Bretylum Tosylate (Discontinued June 2011) | Procainamide Hydrochloride  |
| Bretylum Tosylate/Dextrose                 | Quinidine Gluconate         |
| Dextrose/Lidocaine Hydrochloride           | Quinidine Polygalacturonate |
| Disopyramide Phosphate                     | Quinidine Sulfate           |
| Lidocaine Hydrochloride                    | Tocainide Hydrochloride     |
| Mexiletine Hydrochloride                   |                             |

**Oxygen Therapy – CPT Procedure Codes**

| <b>CPT</b> | <b>CPT Description</b>                                                                                                                                                                                                                                                                          |
|------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 4030F      | Long-term oxygen therapy prescribed (more than 15 hours per day) (COPD)                                                                                                                                                                                                                         |
| 82803      | Gases, blood, any combination of pH, pCO <sub>2</sub> , pO <sub>2</sub> , CO <sub>2</sub> , HCO <sub>3</sub>                                                                                                                                                                                    |
| 82805      | Gases, blood, any combination of pH, pCO <sub>2</sub> , pO <sub>2</sub> , CO <sub>2</sub> , HCO <sub>3</sub> (including calculated O <sub>2</sub> saturation); with O <sub>2</sub> saturation, by direct measurement, except pulse oximetry                                                     |
| 82810      | Gases, blood, O <sub>2</sub> saturation only, by direct measurement, except pulse oximetry                                                                                                                                                                                                      |
| 94010      | Spirometry, including graphic record, total and timed vital capacity, expiratory flow rate measurement(s), with or without maximal voluntary ventilation                                                                                                                                        |
| 94014      | Patient-initiated spirometric recording per 30-day period of time; includes reinforced education, transmission of spirometric tracing, data capture, analysis of transmitted data, periodic recalibration and review and interpretation by a physician/other qualified health care professional |
| 94015      | Patient-initiated spirometric recording per 30-day period of time; recording                                                                                                                                                                                                                    |
| 94016      | Patient-initiated spirometric recording per 30-day period of time; review and interpretation only by a physician or other qualified health care professional                                                                                                                                    |
| 94060      | Bronchodilation responsiveness, spirometry as in 94010, pre- and post-bronchodilator admin                                                                                                                                                                                                      |
| 94070      | Bronchospasm provocation evaluation, multiple spirometric determinations as in 94010, with administered agents (eg, antigen[s], cold air, methacholine)                                                                                                                                         |
| 94150      | Vital capacity, total (separate procedure)                                                                                                                                                                                                                                                      |
| 94200      | Maximum breathing capacity, maximal voluntary ventilation                                                                                                                                                                                                                                       |
| 94250      | Expired gas collection, quantitative, single procedure (separate procedure)                                                                                                                                                                                                                     |
| 94375      | Respiratory flow volume loop                                                                                                                                                                                                                                                                    |
| 94400      | Breathing response to CO <sub>2</sub> (CO <sub>2</sub> response curve)                                                                                                                                                                                                                          |
| 94450      | Breathing response to hypoxia (hypoxia response curve)                                                                                                                                                                                                                                          |
| 94452      | High altitude simulation test (HAST), with interpretation and report by a physician or other qualified health care professional;                                                                                                                                                                |
| 94453      | High altitude simulation test (HAST), with interpretation and report by a physician or other qualified health care professional; with supplemental oxygen titration                                                                                                                             |

|       |                                                                                                                                          |
|-------|------------------------------------------------------------------------------------------------------------------------------------------|
| 94610 | Intrapulmonary surfactant administration by a physician or other qualified health care professional through endotracheal tube            |
| 94620 | Pulmonary stress testing; simple                                                                                                         |
| 94621 | Pulmonary stress testing; complex                                                                                                        |
| 94640 | Pressurized or nonpressurized inhalation treatment for acute airway obstruction or for sputum induction for diagnostic purposes          |
| 94642 | Aerosol inhalation of pentamidine for pneumocystis carinii pneumonia treatment/prophylaxis                                               |
| 94644 | Continuous inhalation treatment w aerosol medication for acute airway obstruction; 1 <sup>st</sup> hour                                  |
| 94645 | Continuous inhalation treatment w/ aerosol medication for acute airway obstruction; ea add hr                                            |
| 94660 | Continuous positive airway pressure ventilation (CPAP), initiation and management                                                        |
| 94662 | Continuous negative pressure ventilation (CNP), initiation and management                                                                |
| 94664 | Demonstration and/or evaluation of patient utilization of an aerosol generator, nebulizer, metered dose inhaler or IPPB device           |
| 94667 | Manipulation chest wall, such as cupping, percussing, and vibration to facilitate lung function; initial demonstration and/or evaluation |
| 94668 | Manipulation chest wall, such as cupping, percussing, and vibration to facilitate lung function; subsequent                              |
| 94680 | Oxygen uptake, expired gas analysis; rest and exercise, direct, simple                                                                   |
| 94681 | Oxygen uptake, expired gas analysis; including CO2 output, percentage oxygen extracted                                                   |
| 94690 | Oxygen uptake, expired gas analysis; rest, indirect (separate procedure)                                                                 |
| 94726 | Plethysmography for determination of lung volumes and, when performed, airway resistance                                                 |
| 94727 | Gas dilution or washout for determination of lung volumes and, when performed, distribution of ventilation and closing volumes           |
| 94728 | Airway resistance by impulse oscillometry                                                                                                |
| 94729 | Diffusing capacity (eg, carbon monoxide, membrane)                                                                                       |
| 94750 | Pulmonary compliance study (eg, plethysmography, volume and pressure measurements)                                                       |
| 94760 | Noninvasive ear or pulse oximetry for oxygen saturation; single determination                                                            |
| 94761 | Noninvasive ear or pulse oximetry for oxygen saturation; multiple determinations                                                         |
| 94762 | Noninvasive ear or pulse oximetry for oxygen saturation; by continuous overnight monitoring                                              |
| 94770 | Carbon dioxide, expired gas determination by infrared analyzer                                                                           |
| 99503 | Home visit - respiratory therapy care (eg, oxygen therapy, respiratory assessment, apnea eval)                                           |
| 99504 | Home visit for mechanical ventilation care                                                                                               |

#### Oxygen Therapy – HCPCS Procedure Codes

| HCPCS | HCPCS Description                                                                                                                                           |
|-------|-------------------------------------------------------------------------------------------------------------------------------------------------------------|
| E0424 | Stationary compressed gaseous oxygen system, rental; includes container, contents, regulator, flowmeter, humidifier, nebulizer, cannula or mask, and tubing |
| E0425 | Stationary compressed gas system, purchase; includes regulator, flowmeter, humidifier, nebulizer, cannula or mask, and tubing                               |

|       |                                                                                                                                                                                                                                                      |
|-------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| E0430 | Portable gaseous oxygen system, purchase; includes regulator, flowmeter, humidifier, cannula or mask, and tubing                                                                                                                                     |
| E0431 | Portable gaseous oxygen system, rental; includes portable container, regulator, flowmeter, humidifier, cannula or mask, and tubing                                                                                                                   |
| E0433 | Portable liquid oxygen system, rental; home liquefier used to fill portable liquid oxygen containers, includes portable containers, regulator, flowmeter, humidifier, cannula or mask and tubing, with or without supply reservoir and content gauge |
| E0434 | Portable liquid oxygen system, rental; includes portable container, supply reservoir, humidifier, flowmeter, refill adaptor, contents gauge, cannula or mask, and tubing                                                                             |
| E0435 | Portable liquid oxygen system purchase; includes portable container, supply reservoir, flowmeter, humidifier, contents gauge, cannula or mask, tubing and refill adaptor                                                                             |
| E0439 | Stationary liquid oxygen system, rental; includes container, contents, regulator, flowmeter, humidifier, nebulizer, cannula or mask, and tubing                                                                                                      |
| E0440 | Stationary liquid oxygen system, purchase; includes use of reservoir, contents indicator, regulator, flowmeter, humidifier, nebulizer, cannula or mask, and tubing                                                                                   |
| E0441 | Oxygen contents, gaseous (for use with owned gaseous stationary systems or when both a stationary and portable gaseous system are owned), 1 month's supply = 1 unit                                                                                  |
| E0442 | Oxygen contents, liquid (for use with owned liquid stationary systems or when both a stationary and portable liquid system are owned), 1 month's supply = 1 unit                                                                                     |
| E0443 | Portable oxygen contents, gaseous (for use only with portable gaseous systems when no stationary gas or liquid system is used), 1 month's supply = 1 unit                                                                                            |
| E0444 | Portable oxygen contents, liquid (for use only with portable liquid systems when no stationary gas or liquid system is used), 1 month's supply = 1 unit                                                                                              |
| E1390 | Oxygen concentrator, single delivery port, capable of delivering 85 percent or greater oxygen concentration at the prescribed flow rate                                                                                                              |
| E1391 | Oxygen concentrator, dual delivery port, capable of delivering 85 percent or greater oxygen concentration at the prescribed flow rate, each                                                                                                          |
| E1392 | Portable oxygen concentrator, rental                                                                                                                                                                                                                 |
| E1405 | Oxygen and water vapor enriching system with heated delivery                                                                                                                                                                                         |
| E1406 | Oxygen and water vapor enriching system without heated delivery                                                                                                                                                                                      |
| K0738 | Portable gaseous oxygen system, rental; home compressor used to fill portable oxygen cylinders; includes portable containers, regulator, flowmeter, humidifier, cannula or mask, and tubing                                                          |
| K0741 | Portable gaseous oxygen system, rental, includes portable container, regulator, flowmeter, humidifier, cannula or mask, and tubing, for cluster headaches                                                                                            |
| S8120 | Oxygen contents, gaseous, 1 unit equals 1 cubic foot                                                                                                                                                                                                 |
| S8121 | Oxygen contents, liquid, 1 unit equals 1 pound                                                                                                                                                                                                       |

## AGENTS ASSOCIATED WITH DRUG-INDUCED PULMONARY DISEASE

Generic Name (Alias)

Study Period: 7/20/2008 to 9/30/2014

Product Name

### Low Risk Categories

#### Antimicrobial Medications

## A. INTRODUCTION

*NOTE: The following abbreviations are used throughout this appendix: MQ = dronedarone; AM=amiodarone; SO=sotalol; FL=flecainide.*

Because patients in this study were not randomly assigned to cohorts, confounders cannot be assumed to be balanced across cohorts in the entire DoD database. Propensity Score (PS) matching was performed to select subsets of subjects from the database for the two primary analysis datasets (SLD and ILD Narrow definition) and for the ILD Broad definition analysis dataset, in order to achieve closer matching of baseline variables between the cohorts.

The process of generating propensity scores and matching patients by PS was conducted separately for each analysis group. Different logistic regression models were used to generate propensity scores for the two analyses as potential baseline confounders varied between the SLD and ILD outcomes.

The PS matching process was also conducted separately for the SLD analysis, ILD Narrow definition analysis and ILD Broad definition analysis. Analysis datasets consisted of MQ subject records and their matching comparator subjects (one PS-matched patient from each comparator cohort). The process, described below, used to generate propensity scores and match comparators to MQ subjects was the same for the three analysis datasets.

The goal of the PS matching was to retain as many cases as possible in the analysis datasets, while at the same time optimizing the balance of baseline confounders across the cohorts. Those two goals could not be optimized simultaneously, so a trade-off was sought. Several logistic regression models and PS matching schema were evaluated to identify one that optimized the number of cases retained for the analysis with the best balance of baseline confounders across the cohorts. Variations in independent variables (e.g., transformations of some confounder variables) and different caliper width requirements for PS matching were considered. For each variation of logistic regression model and caliper width, a table of standardized differences was generated to compare the balance of baseline confounders before and after PS matching, for the particular combination. The project statistician assessed results of the PS model – caliper width combinations and identified the optimum combination to use for the analyses.

This appendix describes the process employed to generate propensity scores and conduct the PS-matching. Also presented are results of validation tests performed on the PS-matched subsets with respect to baseline variables (comparing the balance of baseline variables between dronedarone and comparator cohorts in the full database and the PS-matched subsets) and the primary endpoints (examining the variation of hazard ratios for SLD events and ILD events across PS-based strata for each comparator cohort, relative to dronedarone).

## B. PROPENSITY SCORE GENERATION

### Stepwise Regression to Define the Reduced Propensity Score Model

Potential baseline confounders relevant to each outcome of interest (i.e., SLD and ILD) were identified in the study protocol (see [Appendix 14](#)).

Variables representing all the identified confounder variables were entered as covariates in a full logistic regression model, with membership in the MQ cohort as the dependent variable. [Table 1 – Table 3](#) list variables included in the full logistic regression models for the SLD, ILD Narrow definition, and ILD Broad definition propensity score models, respectively. The full models were run one time against the combined group of all four cohorts in each study population with enough patients to meet the requirements for the statistical power of the study (i.e., MQ, AM, SO and FL).

Stepwise logistic regression was used to identify a subset of confounder variables for inclusion in the reduced logistic regression model, from which propensity scores were generated. Variables in steps up to and including the one with the lowest Akaike Information Criterion (AIC) value were included in the reduced model. [Table 4 – Table 6](#) list the variables retained, respectively, in the SLD, ILD Narrow definition and ILD Broad definition reduced propensity score models.

**Table 1. Variables Included in the Full SLD Propensity Score Model**

| Variable name | Description                                                                                |
|---------------|--------------------------------------------------------------------------------------------|
| Age           | Age as a continuous variable                                                               |
| sex           | Gender (1=male,0=female)                                                                   |
| studyyr       | 12-month period from 7/1/2009 where index date falls (1,2,3,4 or 5)                        |
| prior_ALC     | Record of alcoholism in baseline (1=yes; 0=no)                                             |
| prior_BDD     | Record of bile duct disorder in baseline (1=yes; 0=no)                                     |

## **C. GENERATE PROPENSITY SCORES FROM REDUCED LOGISTIC REGRESSION MODEL**

The reduced logistic model was fitted separately to a subset of the relevant study population containing only the MQ cohort and one of the comparator cohorts. The log-odds of the probability predicted by the reduced logistic regression model for each patient was used as the PS. (The log-odds is the linear portion of the value predicted by the logistic model, prior to transformation into a probability.) A PS was calculated for patients in each subset from the version of the regression model as fitted to patients in the subset (i.e., all dronedarone patients plus one set of comparator subjects at a time). Each dronedarone patient therefore had a distinct PS for matching to each comparator cohort.

## **D. PROPENSITY SCORE MATCHING**

Each of the three comparator cohorts (AM, SO, and FL) were matched independently to the MQ cohort, using their relevant propensity scores. A nearest-neighbor-within-caliper matching algorithm was employed. The initial caliper width was set at 0.2 times the standard deviation of the PS for the subset being matched. Alternate caliper widths were tested for evaluation of the trade-off between sample size and covariate balance. The alternate calipers were 0.1 and 0.05 times the standard deviation of the PS for the subset being matched. In addition, a nearest neighbor match, without a caliper requirement, was also tested. Evaluation of the PS-matched datasets, as described below, resulted in selection of the datasets generated using the 0.2 caliper for outcomes analyses. Specific calculations employed in the PS matching are detailed in the study Statistical Analysis Plan (SAP) (see [Appendix 15](#)). **Figure 1** provides a graphical representation of the matching process.

For each matching scheme tested, the MQ patients were first shuffled into random order. One MQ patient at a time was selected from the randomly ordered list. For each randomly selected patient in the MQ cohort, the “distance” to every available patient in the comparator cohort was calculated (i.e., the absolute difference in centered PS score between MQ and comparator patient), and the closest comparator patient was selected for matching. Once a comparator was selected for matching, it was no longer available for subsequent matching to other MQ patients (i.e., there was no “re-use” of comparators). If a subject within the established “caliper” distance could not be found in every comparator group, the MQ subject was considered unmatchable and omitted from the analysis dataset.

**Figure 1. Propensity Score Matching Process**

## **E. VALIDATE PROPENSITY SCORE BALANCE ON BASELINE VARIABLES**

Between-cohort balance in baseline variables (possible confounders) was evaluated in terms of the standardized difference (“Z-scores”) for each comparator cohort, relative to the MQ cohort. Standardized difference calculations are described in detail in the study SAP (see [Appendix 15](#)). In this study, baseline confounders were considered well balanced if the standardized difference was 10% or less. Confounders with standardized differences >25% after PS matching were considered severely unbalanced. Any confounders assessed as severely unbalanced after PS matching were included as explicit covariates in the Cox proportional hazards regression models used for the survival analyses.

### **SLD**

[Table 7](#) through [Table 10](#) summarize the standardized differences between the MQ and comparator cohorts for the SLD study population and its corresponding PS-matched subsets under the four matching schemes tested.

**Table 7. Standardized Differences in PS Model Covariates between Dronedarone and Comparator Cohorts for SLD Population vs. SLD Analysis Dataset Before and After Propensity Score Matching: DoD Database - 20 July 2009 to 30 September 2014 (Caliper=.2; 4,123 matches per cohort)**

## F. VALIDATE PROPENSITY SCORE BALANCE ON ILD NARROW DEFINITION OUTCOME

Test of Non-significant Interaction between PS and Cohort

The p-value for the Cohort \* PS interaction terms (shown in the following tables) should be well above 0.05 for all comparator cohorts.

### Comparator=Amiodarone

| Parameter                 | Hazard Ratio | 95% CI    | p-value |
|---------------------------|--------------|-----------|---------|
| Cohort                    | 2.8          | 1.2 - 6.6 | 0.02    |
| Study Year                | 1.2          | 0.8 - 1.7 | 0.3     |
| Propensity Score          | 0.7          | 0.3 - 1.8 | 0.5     |
| Cohort * Propensity Score | 1.5          | 0.5 - 3.9 | 0.5     |

### Comparator=Sotalol

| Parameter                 | Hazard Ratio | 95% CI    | p-value |
|---------------------------|--------------|-----------|---------|
| Cohort                    | 0.6          | 0.2 - 2.5 | 0.5     |
| Age                       | 1.1          | 1.0 - 1.1 | 0.03    |
| Propensity Score          | 1.1          | 0.3 - 4.4 | 0.9     |
| Cohort * Propensity Score | 1.8          | 0.3 - 12  | 0.6     |

### Comparator=Flecainide

| Parameter                 | Hazard Ratio | 95% CI    | p-value |
|---------------------------|--------------|-----------|---------|
| Cohort                    | 0.7          | 0.2 - 3.3 | 0.7     |
| Propensity Score          | 1.7          | 0.6 - 4.7 | 0.3     |
| Cohort * Propensity Score | 1.6          | 0.4 - 6.1 | 0.5     |

## G. TEST CONSTANCY OF HAZARD RATIO ACROSS PS-QUINTILES FOR EACH COHORT

Within each cohort, the hazard ratio should not vary systematically across the five PS-based strata (Q1 – Q5). They should fluctuate randomly, over a range consistent with their precision (as indicated by their confidence intervals: Lo – Hi). In other words, the hazard ratios should not show a steady trend across the quintiles, and the CIs should largely overlap. These data are also displayed in a forest plot on the next page.

### Comparator=Amiodarone

| Quintile | Hazard Ratio | 95% CI    | pValue |
|----------|--------------|-----------|--------|
| Q1       | 1.4          | 0.2 - 8.6 | 0.7    |
| Q2       | 1.8          | 0.3 - 9.8 | 0.5    |
| Q3       | 3.0          | 0.3 - 27  | 0.3    |
| Q4       | 2.4          | 0.5 - 12  | 0.3    |
| Q5       | 3.6          | 0.8 - 18  | 0.1    |

### Comparator=Sotalol

| Quintile | Hazard Ratio | 95% CI    | pValue |
|----------|--------------|-----------|--------|
| Q1       | 0.0          | 0.0 - .   | 1.0    |
| Q2       | 1.8          | 0.2 - 20  | 0.6    |
| Q3       | 1.2          | 0.1 - 14  | 0.9    |
| Q4       | 1.8          | 0.2 - 20  | 0.6    |
| Q5       | 1.1          | 0.3 - 4.2 | 0.9    |

### Comparator=Flecainide

| Quintile | Hazard Ratio | 95% CI    | pValue |
|----------|--------------|-----------|--------|
| Q1       | .            | . - .     | .      |
| Q2       | 0.0          | 0.0 - .   | 1.0    |
| Q3       | 0.9          | 0.1 - 15  | 1.0    |

## A. ILD SENSITIVITY ANALYSES

Three sensitivity analyses were conducted for the ILD outcome In order to address complexities of definition and outcome latency associated with ILD. Those separate analyses varied from the primary ILD analysis of this study by changing the definition of ILD used for baseline screening and outcome identification, and/or the risk period examined for ILD outcomes.

Comparisons of demographic characteristics and medical history of patients with confirmed ILD outcomes are provided for each sensitivity analysis, along with comparisons of the outcome rates.

## B. DEFINITIONS OF ILD FOR EXCLUSIONARY SCREENING AND OUTCOME EVENT IDENTIFICATION IN SENSITIVITY ANALYSES

The ILD sensitivity analyses used two different definitions of ILD. The two definitions are referred to as the ILD Narrow definition and the ILD Broad definition.

### ILD Narrow

The ILD Narrow definition was used in the primary ILD analysis and ILD Sensitivity analysis 1. Cohort screening and outcome event definitions are described in sections 8.3.3.2 and 8.4.5.2 of the main report.

### ILD Broad

The ILD Broad definition was used in ILD Sensitivity analyses 2 and 3. Cohort screening and outcome event definitions are described below.

#### ***ILD Broad Definition Exclusionary Screening***

To create the ILD Broad definition study cohorts, patients in the Final study drug cohorts with any baseline occurrence (inpatient or outpatient) regardless of institution type (e.g., acute care hospital, skilled nursing facility, hospice, etc.) of the following diseases were excluded:

- History of Interstitial lung disease Broad definition;
- History of pneumonia; or
- History of sarcoidosis.

Specific codes used to identify the conditions used as screening criteria for the ILD Broad definition population are described below.

#### **History of Interstitial Lung Disease Broad definition**

495.9 Unspecified allergic alveolitis and pneumonitis

515 Post-inflammatory pulmonary fibrosis

- 516.3 Idiopathic fibrosing alveolitis
- 516.30 Idiopathic interstitial pneumonia, not otherwise specified (IIP)
- 516.31 Idiopathic pulmonary fibrosis (IPF)
- 516.32 Idiopathic non-specific interstitial pneumonitis (NSIP)
- 516.33 Acute interstitial pneumonitis (AIP)
- 516.34 Respiratory bronchiolitis interstitial lung disease (RB-ILD)
- 516.35 Idiopathic lymphoid interstitial pneumonia (LIP)
- 516.36 Cryptogenic organizing pneumonia (COP)
- 516.37 Desquamative interstitial pneumonia (DIP)
- 516.8 Other specified alveolar and parietoalveolar pneumonopathies
- 516.9 Unspecified alveolar and parietoalveolar pneumonopathy
- 518 Other diseases of lung
- 518.0 Pulmonary collapse
- 518.1 Interstitial emphysema
- 518.2 Compensatory emphysema
- 518.3 Pulmonary eosinophilia
- 518.4 Acute edema of lung unspecified
- 518.5 Pulmonary insufficiency following trauma and surgery
- 518.51 Acute respiratory failure following trauma and surgery
- 518.52 Other pulmonary insufficiency NEC following trauma and surgery
- 518.53 Acute and chronic respiratory failure following trauma and surgery
- 518.6 Allergic bronchopulmonary aspergilliosis
- 518.7 Transfusion related acute lung injury (trali)
- 518.8 Other diseases of lung
- 518.81 Acute respiratory failure
- 518.82 Other pulmonary insufficiency not elsewhere classified
- 518.83 Chronic respiratory failure
- 518.84 Acute and chronic respiratory failure
- 518.89 Other diseases of lung not elsewhere classified

### **History of Pneumonia**

- 480 Viral Pneumonia
- 480.0 Pneumonia Due To Adenovirus
- 480.1 Pneumonia Due To Respiratory Syncytial Virus
- 480.2 Pneumonia Due To Parainfluenza Virus
- 480.3 Pneumonia Due To Sars-Associated Coronavirus
- 480.8 Pneumonia Due To Other Virus Not Elsewhere Classified
- 480.9 Viral Pneumonia Unspecified
- 481 Pneumococcal Pneumonia [Streptococcus Pneumoniae Pneumonia]
- 482 Other Bacterial Pneumonia
- 482.0 Pneumonia Due To Klebsiella Pneumoniae
- 482.1 Pneumonia Due To Pseudomonas
- 482.2 Pneumonia Due To Hemophilus Influenzae (H. Influenzae)
- 482.3 Pneumonia Due To Streptococcus
- 482.30 Pneumonia Due To Streptococcus Unspecified
- 482.31 Pneumonia Due To Streptococcus Group A
- 482.32 Pneumonia Due To Streptococcus Group B
- 482.39 Pneumonia Due To Other Streptococcus

482.4 Pneumonia Due To Staphylococcus  
 482.40 Pneumonia Due To Staphylococcus Unspecified  
 482.41 Methicillin Susceptible Pneumonia Due To Staphylococcus Aureus  
 482.42 Methicillin Resistant Pneumonia Due To Staphylococcus Aureus  
 482.49 Other Staphylococcus Pneumonia  
 482.8 Pneumonia Due To Other Specified Bacteria  
 482.81 Pneumonia Due To Anaerobes  
 482.82 Pneumonia Due To Escherichia Coli [E.Coli]  
 482.83 Pneumonia Due To Other Gram-Negative Bacteria  
 482.84 Pneumonia Due To Legionnaires' Disease  
 482.89 Pneumonia Due To Other Specified Bacteria  
 482.9 Bacterial Pneumonia Unspecified  
 483.8 Pneumonia Due To Other Specified Organism  
 485 Bronchopneumonia Organism Unspecified  
 486 Pneumonia Organism Unspecified  
 487.0 Influenza With Pneumonia  
 507.0 Pneumonitis due to inhalation of food or vomitus  
 V12.61 Personal History Of Pneumonia (Recurrent)

#### **History of Sarcoidosis**

135 Sarcoidosis

---

NEC = not elsewhere classified

**Table 1. ILD Broad Cohort Screening Results**

The 31,550 patients remaining after the ILD Broad definition exclusionary screening formed the *ILD Broad definition study population*. ([Table 1](#)) Propensity score matching, as described in [Appendix 12](#), was then applied to the *ILD Broad definition study population* to generate the *ILD Broad definition analysis dataset*.

### ***ILD Broad Definition Outcome Events***

ILD Broad definition outcome events were identified from a list of ICD-9-CM codes that included all those used to define the ILD Narrow definition outcomes, plus ICD-9CM codes 495.9 and 518.82. The complete list is provided below.

For each patient in the ILD Broad definition cohorts, the first hospitalization with a discharge diagnosis code meeting the ILD Broad outcome definition within the relevant ILD risk period (see [Sensitivity Analyses Parameters](#), below) was identified as the suspect ILD outcome event. The ILD defining diagnosis code could appear anywhere among the facility discharge diagnoses (i.e., it did not have to be the primary discharge diagnosis). The admission date of the hospitalization with the ILD defining code was assigned as the suspect ILD outcome event date.

ILD Broad definition outcomes were defined using the codes listed below.

#### **ILD Broad Definition - ICD-9-CM Diagnosis Codes**

|        |                                                                                                     |
|--------|-----------------------------------------------------------------------------------------------------|
| 495.9  | Unspecified allergic alveolitis and pneumonitis                                                     |
| 515    | Post-inflammatory pulmonary fibrosis                                                                |
| 516.3  | Idiopathic fibrosing alveolitis                                                                     |
| 516.30 | Idiopathic interstitial pneumonia, not otherwise specified (IIP)                                    |
| 516.31 | Idiopathic pulmonary fibrosis (IPF)                                                                 |
| 516.32 | Idiopathic non-specific interstitial pneumonitis (NSIP)                                             |
| 516.33 | Acute interstitial pneumonitis (AIP)                                                                |
| 516.34 | Respiratory bronchiolitis interstitial lung disease (RB-ILD)                                        |
| 516.35 | Idiopathic lymphoid interstitial pneumonia (LIP)                                                    |
| 516.36 | Cryptogenic organizing pneumonia (COP)                                                              |
| 516.37 | Desquamative interstitial pneumonia (DIP)                                                           |
| 516.8  | Other specified alveolar and parietoalveolar pneumonopathies                                        |
| 516.9  | Unspecified alveolar and parietoalveolar pneumonopathy                                              |
| 518.82 | Other pulmonary insufficiency, not elsewhere classified (e.g., adult respiratory distress syndrome) |

As with the ILD Narrow definition codes, none of the ICD-9-CM codes listed above have been validated.

## C. ILD BROAD DEFINITION DATASETS

*Sensitivity Analysis 2 and Sensitivity Analysis 3 were based on the ILD Broad definition study population. Separate propensity score matching was conducted to construct the ILD Broad definition analysis dataset. Characteristics of patients in the overall ILD Broad definition study population and the PS-matched ILD Broad definition analysis dataset are provided below.*

### **Characteristics of Patients in the *ILD Broad Definition Study Population* Prior to Propensity Score Matching**

#### ***Baseline Characteristics***

Baseline demographic characteristics, and medical and medication use histories for all patients meeting the *ILD broad definition study population* inclusion criteria are found in [Table 2](#). Following initial cohort screening and specific screening for baseline diagnoses consistent with the broad definition of ILD, 31,550 patients remained in the *ILD Broad definition study population*. The amiodarone cohort comprised the largest single subgroup, accounting for roughly one third of the population (36.8%). One fifth of the ILD broad definition patients fell in the dronedarone cohort (22.0%), and another third were divided fairly evenly between the sotalol and flecainide cohorts (16.1% and 14.2%, respectively). The dofetilide and propafenone cohorts together accounted for less than 10% of patients screened into the *ILD Broad definition study population*, and neither met the minimum number required by the study's power calculations for inclusion in the analysis dataset.

#### ***Demographic Characteristics***

The average age of patients in the broad definition study population fell between 63.2 years and 73.4 years. Flecainide patients had the youngest mean age, while the amiodarone patients were oldest, on average.

Roughly half the patients were female in the dronedarone, sotalol, flecainide and propafenone cohorts (45.7%, 46.2%, 48.5% and 50.5%, respectively). The amiodarone and dofetilide cohorts were less balanced by gender, with 41.3% and 31.8% of those cohorts, respectively, accounted for by females.

Race was unknown for roughly half the patients in each *ILD broad definition study population* cohort. The majority of patients with known race were White (between 84% and 88% of each cohort) and between 5.6% and 8.0% were Black. Other racial groups, combined, accounted for less than 8% of patients with known race in any cohort.

**Table 2. Baseline Characteristics of Patients in the ILD Broad Definition Study Population according to Study Drug Cohort: DOD Database - 20 July 2009 to 30 September 2014**

|                                            | Dronedarone  |            | Amiodarone    |            | Sotalol      |            | Flecainide   |            | Dofetilide |            | Propafenone  |            |

### *History of Disease*

Mean DCI scores for the *ILD Broad definition Study population* ranged from 0.8 in the flecainide cohort to 1.8 in the amiodarone cohort.

Of the medical conditions reported in [Table 2](#), GERD was the most frequently occurring in each cohort. Proportions of patients with GERD diagnoses were consistent across patient groups, being found in 25.2% to 29.5% of patient baseline records by cohort.

COPD was the second most frequently found medical condition in all except the flecainide cohort. Roughly one fifth (18.5%) of the amiodarone cohort and 14% of dronedarone, sotalol and dofetilide cohorts were found to have this diagnosis. Only 10.1% of the propafenone cohort and 7.2% of the flecainide cohort had COPD diagnoses in the baseline period.

Asthma diagnoses were found in baseline records of roughly 8% to 10% of patients in the *ILD Broad definition Study population*, and bronchitis in records of roughly 6% to 9% of patients. Less than 4% of any cohort had baseline records indicating connective tissue disease or exposure to toxins.

### *History of Medication Use*

Most patients in the *ILD Broad definition Study population* cohorts had baseline pharmacy records indicating that they were dispensed at least one medication potentially associated with drug-induced pulmonary disease. Propafenone patients were least likely to have received one of these drugs (85.9%) and amiodarone patients most likely (94.7%). The single largest group of potentially pulmonary toxic drugs dispensed during the baseline period to patients in the *ILD Broad definition Study population* were beta-blockers, found in the records of 34.8% of the group. Nearly one third of the population (30%) had been dispensed an anticoagulant prior to their index date, and about one fifth (18.7%) had record of ace inhibitors. Hydrochlorothiazide (or combination products containing hydrochlorothiazide) were found in baseline dispensing records of 11.6% of the group, and nitrofurantoin in the records of 2.1%. All other potentially ILD inducing drugs in the baseline records of the *Broad definition Study population* were found in records of less than 2% of the group.

Between 0.4% and 0.7% of patients in any cohort used other anti-arrhythmic agents in the year preceding their index date. The five patients with therapeutic oxygen treatments in the baseline period were accounted for by three dronedarone patients and one each in the amiodarone and sotalol cohorts.

## **Post-Index Date Characteristics**

### ***Patient Follow-Up Time***

The distribution of patients in the *ILD Broad definition Study population* according to length of follow-up are provided in [Table 3](#). Follow-up time was defined previously in [Section 8.4.2](#) of the main report.

The average follow-up time in this population ranged from approximately 30 months in the amiodarone cohort to 36.7 months in the dronedarone cohort. Average follow-up times in the sotalol, flecainide, dofetilide, and propafenone cohorts fell within a three-month range of 32.5 to 35.5 months.

### ***Length of Index Treatment Episode***

Index treatment episodes in the *ILD Broad definition Study population* were the same, or slightly longer, on average, than those of the corresponding cohorts in the *ILD Narrow definition Study population*. [Table 4](#) shows that mean index treatment episodes varied from 221 days (7.4 months) in the amiodarone cohort, to more than double that length in the dofetilide cohort (453 days or 15.1 months). The shortest index treatment episode lasted one day in all cohorts, and the longest exceeded five years.

### ***Number of Index Drug Treatment Episodes***

Patients in the *ILD Broad definition study population* averaged between one and two episodes of treatment with their index drug during the follow-up period. The median of one episode in all cohorts reflects the large proportion of patients (minimum two-thirds in each cohort) who had only one episode of treatment with their index drug. ([Table 5](#)) The maximum number of index drug treatment episodes ranged from 10 in the dofetilide cohort to a high of 19 in the sotalol cohort.

### ***Non-index Study Drugs Dispensed***

Also seen in [Table 5](#) is the distribution of patients in the *ILD Broad definition study population* cohorts according to the number of other study drugs dispensed during follow-up. Like patients in the *ILD narrow definition study population*, most of this group were not dispensed any study drugs other than the one that qualified them for inclusion in their drug cohort. The highest proportions of patients dispensed at least one study drug, other than their index drug, were found in the dronedarone and propafenone cohorts (34.1% and 33.5%, respectively). Patients in the amiodarone cohort were least likely to have filled a prescription for one of the other study drugs (13.0%).

<sup>a</sup> Follow-up time is calculated as time from Index Date to the earliest of either end of eligibility, end of study or date of death.

## Characteristics of Patients in the ILD Broad Definition PS-matched Analysis Dataset

Three cohorts met the minimum required number of cases for retention as comparators in the PS-matched *ILD broad definition analysis dataset*. Those were the amiodarone, sotalol and flecainide cohorts. There were 3,594 patients per matched cohort (total 14,376 patients).

**Table 6** provides a comparison of patient characteristics for the overall *ILD Broad definition study population* to those of the corresponding analysis dataset. Standardized differences are included for comparisons of each characteristic, by comparator cohort, to the corresponding value for the dronedarone cohort. Values exceeding 25 are considered to represent a significant difference in each paired comparison. Baseline demographic characteristics and selected baseline disease and medication use history for the PS-matched cohorts are summarized in **Table 7**.

**Table 6. Standardized Differences in PS Model Covariates between Dronedarone and Comparator Cohorts for ILD Broad Definition Population vs. ILD Broad Definition Analysis Dataset: DoD Database - 20 July 2009 to 30 September 2014**

### **Baseline Characteristics**

As seen in [Table 6](#), prior to PS matching there were four patient characteristics with at least one comparison that differed significantly from the corresponding measure in the dronedarone cohort. Those characteristics were mean age on index date, mean study year of index date, hospitalization in the baseline and mean number of different medications in the baseline. All other variables were considered balanced across cohorts in the overall study population. The table also shows that the PS-matched analysis dataset was well balanced on all variables (i.e., no standardized differences of 25 or greater).

The range of mean age changed from a ten-year span of 63.2 – 73.4 prior to matching, to the smaller interval of 66.7-69.7 in the matched data. Mean age in the analysis dataset is lower than in the overall study population in all cohorts except flecainide, where it was higher by 3.5 years. ([Table 5 and Table 6](#)) Significant imbalances between mean age of the dronedarone cohort compared to the amiodarone and flecainide cohorts prior to PS matching were eliminated in the matched dataset.

Similarly, significant differences in mean study year of patient index date between the dronedarone cohort and both amiodarone and flecainide cohorts were found in the overall study population. In the PS-matched analysis dataset, however, the mean year of index date was more similar across all cohorts, and differences were not significant.

Percentages of the amiodarone and sotalol cohorts with at least one baseline hospitalization were significantly higher than the corresponding percentage of the dronedarone cohort in the overall study population, but those differences were also balanced in the PS-matched data.

The last significant difference in the overall study population was between the dronedarone and flecainide cohorts with regard to average number of different medications dispensed in the baseline. That comparison showed a significantly lower mean number of different drugs dispensed to the flecainide group prior to their index date (9.0 vs 10.9 in the dronedarone cohort, standardized difference=35.3). PS-matching also brought that variable into balance across all cohorts.

Distributions of patients by demographic characteristics and history of medication use in the *ILD Broad definition analysis dataset* varied little from the corresponding values in the *ILD Narrow definition analysis dataset*. Mean age on index date (range of roughly 66.7 to 69.7) and percent female (range 46.7% to 49.2%) were roughly the same across the *ILD Broad definition* cohorts. Approximately 90% of patients in each cohort had been dispensed at least one drug suspected of being associated with pulmonary disease, and less than one percent of each group had used other anti-arrhythmic agents in the baseline period.

In general, similar but slightly lower proportions of patients in the *ILD Broad definition analysis dataset* had diagnoses for the specific conditions itemized in [Table 7](#), versus the *ILD*

*Narrow definition analysis dataset.* Mean DCI was slightly lower in the *ILD Broad definition analysis dataset* than in the *ILD Narrow definition analysis dataset* for all but the flecainide cohort (range 0.9-1.5). In most cases, lower proportions of patients in the PS-matched broad definition analysis dataset had baseline diagnoses of asthma, bronchitis, COPD, connective tissue disease and exposure to toxins. The somewhat lower mean DCI and proportions of patients with the specified diagnoses may be a result of additional patients eliminated from the *ILD Broad definition study population* by the added screening criteria (i.e., broader list of baseline diagnoses).

### **Post-Index Date characteristics**

#### **Patient Follow-Up Time**

Follow-up time for patients in the *ILD broad definition analysis dataset* is summarized in **Table 8**. Mean follow-up time ranged from 994 days (33.1 months) in the dronedarone cohort to 1,066 days (35.5 months) in the sotalol cohort. Length of follow-up exceeded 730 days (roughly 2 years) for two-thirds or more of patients in all cohorts (range 64.6% -70.5%).

<sup>a</sup>Follow-up time is calculated as time from Index Date to the earliest of either end of eligibility, end of study or date of death.

#### **Length of Index Treatment Episode**

Data on length of index treatment episodes for patients in the *ILD broad definition analysis dataset* are reported in **Table 9**. Variations across cohorts observed in the overall *ILD Broad definition study population* remained in the PS-matched analysis dataset. The mean index

treatment episode length ranged from 225 days (7.5 months) in the amiodarone cohort to 399 days (13.3 months) in the sotalol cohort.

**Table 9. ILD Broad Definition Analysis Dataset Length of Index Treatment Episode according to Study Drug Cohort: DoD Database - July 20, 2009 through 30 September 2014**

<sup>a</sup>Length of index treatment episode is calculated as time from Index Date to the end of the index treatment episode.

## D. SENSITIVITY ANALYSES RESULTS

### SENSITIVITY ANALYSES PARAMETERS

**Table 10** lists the combinations of ILD definition, analysis dataset, and risk periods used for the primary ILD analysis and each of the ILD sensitivity analyses.

**Table 10. ILD Analyses Study Cohort and Risk Period Combinations**

| Analysis               | ILD Definition | Analysis Dataset             | Risk Period       |
|------------------------|----------------|------------------------------|-------------------|
| Primary analysis       | Narrow         | <i>ILD Narrow definition</i> | ILD Risk Period 1 |
| Sensitivity analysis 1 | Narrow         | <i>ILD Narrow definition</i> | ILD Risk Period 2 |
| Sensitivity analysis 2 | Broad          | <i>ILD Broad definition</i>  | ILD Risk Period 1 |
| Sensitivity analysis 3 | Broad          | <i>ILD Broad definition</i>  | ILD Risk Period 2 |

**ILD Risk Period 1** was the period that began the day after the Index Date and continued until the earliest occurrence of an ILD outcome, the end of MHS eligibility, death, or the end of follow-up (see [Appendix 7 – Figure 2](#)).

**ILD Risk Period 2** has a shorter maximum observation period. Beginning the day after the Index Date, **ILD Risk Period 2** ended at the earliest occurrence of an ILD outcome, the end of MHS eligibility, death, or the end of the index treatment episode (see [Figure 1](#)).

**Figure 1. Suspected ILD Outcome Event Identification during ILD Risk Period 2**

## ILD Sensitivity Analysis 1

*Sensitivity Analysis 1* was conducted in the *ILD Narrow definition analysis dataset*, using the same narrow definition of ILD as the primary analysis to identify suspected outcomes. This sensitivity analysis varied from the ILD primary analysis by limiting suspected ILD outcomes to those identified during *Risk Period 2*. Characteristics of patients included in the *ILD Narrow definition study population* and *ILD Narrow definition analysis dataset* are described in [Section 9.2](#) of this report.

### *ILD Sensitivity Analysis 1 Adjudication Results*

A total 33 cases of suspected narrow definition ILD were identified in the interval from index date through end of index treatment episode. ([Table 11](#)) The ILD-AP confirmed eleven of those cases as true ILD outcome events (i.e., adjudication result="Yes"). Most of the confirmed cases occurred in the amiodarone cohort (n=8), two were in the dronedarone cohort and one in the flecainide cohort. None of the seven suspected cases in the sotalol cohort were confirmed by the ILD-AP. Of the remaining 22 suspected cases, seventeen were adjudicated as "No", and the remaining five received an assessment of "Indeterminate" (i.e., insufficient evidence to make a definitive conclusion).

**Table 11. Adjudication Results of Suspected ILD Narrow Definition Outcome Events within the Index Treatment Episode according to Study Drug Cohort: DOD Database - 20 July 2009 to 30 September 2014**

### *ILD Sensitivity Analysis 1 Main Results*

[Table 12](#) reports incidence rates and hazard ratios for the confirmed cases of narrow definition ILD identified during patients' index treatment episodes. Reported p values are for each individual comparator cohort versus the dronedarone cohort. While the specific rates differ from those of the primary ILD narrow definition analysis, contrasting rates in the comparator cohorts to corresponding values in the dronedarone cohort yield essentially the same findings.

The incidence rate of narrow definition ILD during the index treatment episode was significantly higher in the amiodarone cohort than in the dronedarone cohort (3.2 per 1,000 persons years of exposure versus 0.6 per 1,000 person years of exposure; p=0.02). The

incidence rates in the flecainide cohort (0.3 per 1,000 person years of exposure) did not differ notably from the rate in the dronedarone cohort.

Similarly, CPH analysis identified a significant excess risk of narrow definition ILD over the course of the index treatment episode for patients in the amiodarone cohort, as compared to the dronedarone cohort (HR=5.2; 95% CI=1.1-25.1). The hazard ratio comparing the same risk for the flecainide versus dronedarone cohorts were not significant.

**Table 12. ILD Narrow Definition Analysis Dataset Incidence Rates (per 1,000 person-years) and Hazard Ratios of Adjudicated Interstitial Lung Disease Events Identified during the Index Treatment Episode: DOD Database - 20 July 2009 to 30 September 2014**

nc = value cannot be calculated

<sup>a</sup> The exposure period (ILD Risk Period 2) begins the day after the Index Date and ends at the earliest occurrence of the ILD event, end of eligibility in the health plan, death or end of the index treatment episode.

<sup>b</sup> Person years of exposure is the sum of total days in ILD Risk Period 2 for all patients in the ILD Narrow definition analysis dataset.

<sup>c</sup> Hazard ratio for dronedarone-flecainide comparison is a crude rate. Hazard ratio for dronedarone-amiodarone comparison is adjusted for study year of index date. Hazard ratio for dronedarone-sotalol comparison is adjusted for age on index date.

## ILD Sensitivity Analysis 2

### *ILD Sensitivity Analysis 2 Adjudication Results*

A total of 122 suspected cases of broad definition ILD were identified in the *ILD Broad definition analysis dataset*, and the adjudication process confirmed 45 of those as true ILD outcome events (i.e., adjudication result="Yes"). Most of the cases not confirmed to be ILD were adjudicated as "No" (n=69), and the remaining eight were adjudicated as "Indeterminate" (i.e., there was not enough information to reach a definitive conclusion).

The largest single number of confirmed cases of Broad definition ILD during Risk period 1 (i.e., through the end of the follow-up period) occurred in the amiodarone cohort (16 cases). That was twice the number of cases as occurred in the dronedarone cohort. The flecainide and sotalol cohorts had 10 and 11 confirmed cases, respectively. See [Table 13](#).

Although a net of eight more suspected cases of ILD were identified during the follow-up period using the broad versus narrow definitions of ILD to screen patients and identify

outcomes (n=122 versus n=113), the number of confirmed cases was higher in the analysis using the broad definition.

**Table 13. Adjudication Results of Suspected ILD Broad Definition Outcome Events within the Follow-up according to Study Drug Cohort: DOD Database - 20 July 2009 to 30 September 2014**

| Yes                                        | 8                      | 30.8 | 16                    | 42.1 | 11                 | 31.4 | 10                    | 43.5 |
| No                                         | 16                     | 61.5 | 20                    | 52.6 | 21                 | 60.0 | 12                    | 52.2 |
| Indeterminate                              | 2                      | 7.7  | 2                     | 5.3  | 3                  | 8.6  | 1                     | 4.3  |

### **ILD Sensitivity Analysis 2 Main Results**

Incidence of confirmed broad definition ILD during the follow-up period ranged from 0.8 per 1,000 person years of follow-up in the dronedarone cohort to 1.6 per 1,000 person years of follow-up in the amiodarone cohort. (See [Table 14](#)) Notwithstanding the amiodarone rate being double that of the dronedarone cohort, none of the differences in incidence rates between the dronedarone cohort and any of the three comparator cohorts were significant.

Similarly, none of the hazard ratios comparing risk of broad definition ILD over the course of the follow-up period between each of the comparator cohorts and the dronedarone cohort were significant.

**Table 14. ILD Broad Definition Analysis Dataset Incidence Rates (per 1,000 person-years) and Hazard Ratios of Adjudicated Interstitial Lung Disease Events Identified during Follow-up Period: DOD Database - 20 July 2009 to 30 September 2014**

<sup>a</sup> The exposure period (ILD Risk Period 1) begins the day after the Index Date and ends at the earliest occurrence of the ILD event, end of eligibility in the health plan, death or end of the study period.

<sup>b</sup> Person years of exposure is the sum of total days in ILD Risk Period 1 for all patients in the ILD Broad definition analysis dataset.

## ILD Sensitivity Analysis 3

### *ILD Sensitivity Analysis 3 Adjudication Results*

Numbers of suspected ILD broad definition outcome events identified through the end of the index treatment episode, and their adjudication results, are found in [Table 15](#). A total of 33 cases with a broad definition ILD diagnosis that could potentially be attributed to drug treatment were identified.

Less than one third of the suspected cases (9 cases) in this sensitivity analysis were confirmed as true ILD outcome events. Most of the confirmed cases were in the amiodarone cohort (6 cases), and the remaining three were distributed one each in the dronedarone, sotalol and flecainide cases. The bulk of the suspected outcomes (20 cases) were adjudicated as “No.” No definite conclusion could be reached about the remaining four cases.

**Table 15. Adjudication Results of Suspected ILD Broad Definition Outcome Events within the Index Treatment Episode according to Study Drug Cohort: DOD Database - 20 July 2009 to 30 September 2014**

### *ILD Sensitivity Analysis 3 Main Results*

[Table 16](#) displays incidence rates of confirmed cases of broad definition ILD identified through the end of the index treatment episode. The incidence rate for the amiodarone cohort was nine times that of the dronedarone, sotalol or flecainide cohorts (2.7 per 1,000 years of exposure in the amiodarone cohort versus 0.3 per 1,000 years of exposure for the dronedarone, sotalol and flecainide cohorts). The difference between the amiodarone and dronedarone incidence rates was significant ( $p=0.02$ ).

Also seen in [Table 16](#), the hazard of confirmed broad definition ILD during the index treatment episode was significantly higher for the amiodarone cohort versus the dronedarone cohort ( $HR=8.1$ ; 95%  $CI=1.0-67.7$ ,  $p=0.05$ ). The risk over the time of the index treatment episode was not significantly different for either the sotalol or flecainide cohorts as compared to the dronedarone cohort.

**Table 16. ILD Broad Definition Analysis Dataset Incidence Rates (per 1,000 person-years) and Hazard Ratios of Adjudicated Interstitial Lung Disease Events Identified during the Index Treatment Episode: DOD Database - 20 July 2009 to 30 September 2014**

Sanofi standard operating procedures for epidemiologic studies**

---

**Date:** January 26, 2016

## STUDY SYNOPSIS

---

**Drug name:** Dronedarone

---

**Title:** Serious Liver Injury and Interstitial Lung Disease Occurrences in Patients Diagnosed with Atrial Fibrillation Treated with Selected Anti-arrhythmics

---

**Background:** Post-marketing pharmacovigilance data of spontaneous reports indicated safety signals related to severe acute liver injury/disease (SLD), and interstitial lung disease (ILD). In order to examine these associations in the real-world setting, where dronedarone is approved for non-permanent AF, Sanofi requested a retrospective cohort study examining the association between dronedarone and selected anti-arrhythmic comparator drugs and these subsequent events among adults.

---

**Objective(s):** To compare rates of Serious Liver Injury/Disease and Interstitial Lung Disease, separately, in patients exposed to other selected anti-arrhythmic comparator cohorts versus dronedarone-exposed patients.

---

**Study design:** Observational retrospective cohort study

---

**Study Population:** Two healthcare data environments will be used for this study; the Department of Defense (DoD) electronic health record system and the HealthCore Integrated Research Database (HIRD<sup>SM</sup>), which is a healthcare payer claims database. Cohorts of new users of dronedarone, amiodarone, sotalol, flecainide, propafenone, and dofetilide will be selected from these data sources. Patient cohorts will be propensity score matched to patients in the dronedarone cohort to ensure balance in key variables among treatment groups. Separate analyses will be conducted in the two data environments.

All patients will be screened against an overall set of inclusion criteria. One set of event-specific exclusion criteria will be used to create the SLD study population. Two sets of event-specific exclusion criteria (narrow and broad) will be applied to create two ILD study populations. These two sets will attempt to address the various diagnosis codes used to identify ILD.

|                            |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
|----------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Treatment Episodes:</b> | Treatment episodes will be identified for each study drug within the study period and will be defined as a continuous period starting on the date a study drug is dispensed, and continuing for the duration of the prescription's days' supply. In cases where there is a gap of fewer than 30 days between the date on which a prescription's days' supply ends, and the dispensing date of a subsequent prescription for the same drug, the subsequent prescription will be considered a continuation of the first treatment episode. The Index Treatment Episode will be the episode that begins on the patient's Index Date. |
|----------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

---

|                     |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
|---------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Risk Periods</b> | <p>The SLD Risk Period is defined as the period that begins the day after the Index Date and continues until the earliest occurrence of the outcome, the end of eligibility, death, or the end of the index treatment episode.</p> <p>The ILD risk period is defined in 2 ways. ILD Risk Period 1 is defined as the period that begins the day after the Index Date and continues until the earliest occurrence of the outcome, the end of eligibility, death, or the end of the study period.</p> <p>ILD Risk Period 2 is defined as the period that begins the day after the Index Date and continues until the earliest occurrence of the outcome, the end of eligibility, death, or the end of the index treatment episode.</p> |

|                                |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
|--------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Outcome(s) of interest:</b> | <p>The two primary outcome events of interest are hospitalized occurrences of:</p> <ol style="list-style-type: none"><li>1. Serious Liver Injury/Disease,</li><li>2. Interstitial Lung Disease.</li></ol> <p>A sensitivity analysis will also be conducted using a broader ILD definition for baseline exclusionary screening and suspected outcome event identification. Additionally, sensitivity analyses will be conducted in ILD Risk Period 2 using the same narrow and broader definitions that were used in ILD Risk Period 1. All suspected hospitalized outcome events will be adjudicated by their respective Independent Adjudication Panels.</p> |
|--------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

---

---

**Covariates/ Confounders:** Should sufficient numbers of outcomes be identified for analysis, risk factors and potential confounders for serious liver injury/disease and interstitial lung disease will be identified. These variables will be identified in the eligibility files and notes as well as by diagnosis and procedure codes and drug files. If not included in cohort matching, these variables may be used for stratification or multivariable modeling in the statistical analysis.

**Confounders.** For SLD, potential risk factors / confounders include alcoholism, bile duct disorders, congestive heart failure, diabetes, obesity, prior use of anti-arrhythmic agents, and hepatotoxic medications. For ILD, potential risk factors / confounders include asthma, bronchitis, chronic obstructive pulmonary disease, connective tissue disorders, exposure to occupational and environmental toxins, gastroesophageal reflux disease, prior use of anti-arrhythmic agents, agents associated with pulmonary toxicity, and therapeutic oxygen treatment.

---

**Statistical Analysis:** **Power Calculation.** The number of dronedarone subjects required to provide 80% power, at the 0.05 alpha level, to detect a hazard ratio of 3.0 with 5 year accrual interval and an estimated incidence rate of 1 event / 1,000 patient-years, is 3,860 subjects with equal number of patients in the comparator group.

**Propensity score matching (PSM)** will utilize a nearest-neighbor-within-caliper matching algorithm.

**Analytic approach.** Descriptive summaries will be tabulated for each outcome event and for each exposure group: the number and proportion of subjects with and without the event, with 95% confidence intervals, and p-values, the number of patient-years of observation, the number of incident events, the unadjusted event rate with its 95% confidence interval, and p-value. Kaplan-Meier survival curves will be prepared and graphed, with one graph for each outcome, and a separate survival curve for each exposure group. The hazard function may be estimated from a life table, or from a fitted model of a survival curve, depending on the number of outcomes (SLD or ILD) observed in the exposure groups. Cox regression will be carried out for each outcome, and incorporating any other covariates of interest that were not included in the propensity score. Results will be presented as adjusted hazard ratios, with 95% confidence intervals and p values, for each comparator drug relative to dronedarone. A sensitivity analysis will be performed on the subset of the population that has available laboratory results/additional confounder data to test whether the additional data changes the effect estimates. Analyses will be run separately for each database, and the results of the analyses (hazard ratios, confidence intervals, p values, etc.) will be described.

---

**Timeline:** See Study Timelines Section.

## 1 INTRODUCTION

Dronedarone (Multaq®) is an anti-arrhythmic drug with effects in all four classes of the Vaughan Williams classification utilized for treatment of patients with non-permanent atrial fibrillation (AF).<sup>1\*</sup> Dronedarone was initially authorized for marketing on 1 July 2009 in the United States. It is currently marketed in 32 countries in the Americas, Europe, and Asia.

The goals of treatment for AF include ventricular rate control, anticoagulation for the prevention of thromboembolism, and *elective* conversion to normal sinus rhythm and maintenance of sinus rhythm, depending on the clinical state of the patient.<sup>2</sup> Initial treatment involves either ventricular rate control or rhythm control. If ventricular rate control is the initial treatment strategy, rhythm control is not considered a therapeutic objective. On the other hand, if rhythm control is the initial treatment strategy, concomitant management of rate control needs to be addressed. Regardless of initial treatment strategy, antithrombotic therapy should be considered. Response to initial therapy will guide further treatment decision-making.

Guidelines for the treatment of AF targeted rate and rhythm control (as well as anticoagulation) exist although some medications used for treatment are not indicated for AF.<sup>3,4</sup> Rate control therapy consists of treatment with beta-blockers, calcium channel blockers, and digoxin, while for rhythm control, amiodarone, and other anti-arrhythmic agents are used.

Post-marketing pharmacovigilance data of spontaneous reports associated with dronedarone indicate safety signals related to severe liver injury/disease (SLD), and interstitial lung disease (ILD). In order to examine these associations in the real-world setting, where dronedarone is approved for non-permanent AF, Sanofi requested a retrospective cohort study examining the association between dronedarone or comparator anti-arrhythmic drugs and these subsequent events among adults.

To accomplish this, data from the US Department of Defense (DoD) Military Health System (MHS) database, an electronic health record system covering US military personnel and their family members is used for this study, as well as data from HealthCore Integrated Research Database (HIRD<sup>SM</sup>), a healthcare payer claims database. The use of these data will provide insight into the risk of SLD and ILD in a non-interventional, "real world" setting.

---

\* Atrial flutter (AFL) was removed from this Protocol to reflect the indication listed in the current product label. AFL, as an indication, was removed from the product label dated December 2011. Data from the Dronedarone Surveillance Study showed approximately 0.6% of patients in both the Serious Liver/Disease Study Cohort and the Interstitial Lung Disease Study Cohort with an AFL diagnosis only. Given the small percentage, it was decided to remove the AFL diagnosis from the original AF/AFL study definition.

## 2 STUDY OBJECTIVES

There are two primary objectives for this study:

- To compare rates of hospitalized serious liver injury/disease (**SLD**) in dronedarone-exposed patients versus five separate anti-arrhythmic comparator cohorts all treated for AF.
- To compare rates of hospitalized interstitial lung disease (**ILD**) in dronedarone-patients versus five separate anti-arrhythmic comparator cohorts all treated for AF.

## 3 STUDY DESIGN

### 3.1 STUDY COMMITTEES

This study is being conducted and coordinated by The Degge Group, Ltd. (Degge) located in Fairfax, Virginia, USA. It will be carried out under the joint leadership of Degge in collaboration with the sponsor, Sanofi. It includes two data sources, appropriate committees for monitoring and safety of study progress, and adjudication of outcome events. Each committee has its' own charter with written roles and responsibilities and has written minutes of all committee meetings.

#### 3.1.1 Epidemiology Steering Committee

An external Epidemiology Steering Committee (ESC) has been convened to provide scientific oversight and advice on the Epidemiologic Study Protocol. The scientific management of this process consists of member identification, Charter development and approval, administrative management (e.g., contracting with experts, travel and accommodation arrangements), and Committee meeting management.

##### 3.1.1.1 Epidemiology Steering Committee Member Identification

An odd number of members were selected. ESC members, who are experts in their fields, include hepatologists, epidemiologists, statisticians, regulatory drug safety experts with experience in liver injury, and cardiologists. Panel members serve for the term of the study, which is estimated to last for approximately two years. The committee expects to meet at least two to three times a year.

#### **Epidemiology Steering Committee Membership:**

Judith K Jones, MD, PhD, FISPE, **Chair**  
*The Degge Group, Ltd., Fairfax, Virginia*

Rhonda L Bohn, ScD, MPH, FISPE, **Co-Chair**  
*Rhonda L Bohn, LLC, Boston, Massachusetts*

(Jean) Toby Barbey, MD, *Cardiologist*  
*Social Scientific Sciences, Silver Spring, Maryland*

(John) Michael Gaziano, MD, MPH, *Cardiologist/Epidemiologist*  
*Brigham & Women's Hospital, Boston, Massachusetts*

[NOTE: Resigned as of Aug 25, 2014. A replacement was not identified.]

James H. Lewis, MD, *Hepatologist*  
*Georgetown University, Washington, District of Columbia*

Captain Sally Tamayo, MD, *Cardiologist*,  
*Navy Medical Center, US Department of Defense, Portsmouth, Virginia*

Susan T. Sacks, PhD, FISPE, *Epidemiologist/Statistician*  
*Independent, Scottsdale, Arizona*

### **3.1.1.2      *Epidemiology Steering Committee Charter***

A description of the ESC and its mandate is described in the Charter. The Charter outlines the general topics and formats of the meetings over time. Committee meetings are held either face-to-face or held via teleconference. Two to three (2 - 3) subsequent annual meetings are anticipated; additional teleconferences or meetings will be determined on an as needed basis.

### **3.1.1.3      *Administrative Management of Epidemiology Steering Committee***

Degge will provide Agenda items, which will include a list of topics to be discussed at Epidemiology Steering Committee meetings. Degge is responsible for providing meeting materials to all participants prior to scheduled Epidemiology Steering Committee meetings as well as recording meeting minutes and disseminating the minutes to all participants.

## **3.1.2 Independent Adjudication Panel (IAP)**

Two separate IAPs will be convened, one for each outcome event; IAP-SLD, IAP-ILD.

### **3.1.2.1   *IAP Member Identification***

An odd number of members will be selected for the two Panels; one devoted to hepatic outcomes, the other, pulmonary. Three Panel members will be identified with a goal of having at least two specialists in each Panel representing the two therapeutic areas (liver Injury, pulmonary disease). Ideally, a representative from the US Department of Defense will be included as a member of each of the IAPs. Members will serve for the term of the study, which is estimated to last for approximately two years.

**IAP-SLD** members include:

- Willis C. Maddrey, MD, *Assistant to the President*, UT Southwestern Medical Center, Dallas, Texas,
- Natalie GB Murray, MD, *Medical Director - Liver Transplantation*, Baylor All Saints Medical Center, Texas, Fort Worth, Texas,

- Mark Russo, MD, MPH, *Medical Director of Liver Transplantation, Chief, Division of Hepatology*, Carolinas Medical Center, Charlotte, North Carolina.

**IAP-ILD** members include:

- Kevin R. Flaherty, MD, MS, *Professor of Internal Medicine*, University of Michigan Health System, Ann Harbor, Michigan,
- David J. Lederer, MD, MS, *Associate Medical Director, NYP/Columbia Lung Transplant Program*, Columbia University Medical Center, New York, New York,
- Ganesh Raghu, MD, *Director, Center of Interstitial Lung Disease*, University of Washington Medical Center, Seattle, Washington.

### **3.1.2.2 IAP Charter**

For each IAP, a Charter will be written which will describe the Panel's role and responsibilities, the adjudication process, and voting rules.

### **3.1.2.3 IAP Procedures**

Procedures for outcome event review and adjudication will be defined in a separate document and based on this protocol.

### **3.1.2.4 Administrative Management of IAP**

Degge will coordinate the outcome event review for the Adjudication Panels, and will be responsible for convening all Adjudication Review Meetings to reconcile differences in outcome event assignments. Degge will also be responsible for recording meeting minutes and disseminating the minutes to all participants.

## **3.2 STUDY DESCRIPTION**

An observational retrospective cohort design will be used to estimate the rate of SLD and ILD, separately. This protocol will cover both study outcomes with separate analyses conducted for each outcome. Further, separate analyses for each outcome event will be conducted in each data source (DoD and HIRD<sup>SM</sup>).

## **3.3 SOURCE POPULATIONS / DATABASES**

Two healthcare data environments will be used for this study:

- United States Department of Defense (DoD), Military Health System electronic health record system;
- HealthCore Integrated Research Database (HIRD<sup>SM</sup>), which is a healthcare payer claims database.

The results from each database will be reported separately.

### 3.3.1 US Department of Defense Military Health System Database

The source population for this study will include all members in the United States Department of Defense (DoD) Military Health System's (MHS) electronic health record system, which includes health care data for active duty members and their families (beneficiaries).

The MHS provides two types of care to its beneficiaries. It provides *direct care* through a network of 65 military hospitals and 411 clinics, and *purchased care* provided by civilian providers financed through managed care contracts and fee-for-service reimbursements. Direct care accounts for 37% of the total care provided with the balance being purchased from civilian providers. All the administrative events generated by either a direct care or purchased care encounter are centrally processed into the MHS Data Repository (MDR). Examples of the data recorded in such encounters include patient demographic data, provider information (provider ID, specialty, facility), diagnostic codes (ICD-9-CM codes for outpatient; Diagnosis-Related Group (DRG) codes for inpatient) and Current Procedural Terminology (CPT) codes for any procedures. Extensive information regarding the patient including address, age, race, rank, active duty status is also stored within the MDR via connections with the Defense Eligibility Enrollment Reporting System (DEERS). The military utilizes an electronic medication ordering system called the Pharmacy Data Transaction System (PDTs). All the prescribing details of both direct care and purchased care outpatient medication orders are electronically coded including the prescribed drug name and National Drug Code (NDC), dose, quantity, refills and prescribing provider.

#### Health ResearchTx, LLC / Department of Defense

Health ResearchTx (HRTx), a health research organization that has a unique partnership with the DoD to leverage the DoD healthcare system to improve health outcomes, lower costs, and increase force readiness, facilitates access to the DoD data extracts. Data access is provided to Degge through a secured server by encrypted login and password. HRTx is responsible for obtaining DoD Institutional Review Board or Ethics Board required approvals for this protocol.

### 3.3.2 HealthCore Integrated Research Database (HIRD<sup>SM</sup>)

The HealthCore Integrated Research Database (HIRD<sup>SM</sup>) will also be used for this study. The HIRD<sup>SM</sup> is currently a broad, clinically rich and geographically diverse spectrum of longitudinal insurance claims data from WellPoint and non-WellPoint health insurance plans in the Northeastern, Mid-Atlantic, Southeastern, Midwest, Central, and Western regions of the United States. It contains data on eligibility, medical, and pharmacy claims on more than 45 million members of one of the largest commercially insured populations in the United States. In addition, electronic laboratory results data are available for a subset of approximately 10 million patients. Outpatient and inpatient clinical data contained in the HIRD<sup>SM</sup> are coded with International Classification of Disease (ICD) diagnosis and procedure codes, Current Procedural Terminology (CPT<sup>®</sup>) codes, and the Healthcare Common Procedure Coding System (HCPCS). Outpatient medications are coded with National Drug

Codes (NDCs) as well as with Generic Product Indicators (GPI), which include the drug name, dosage form and drug strength.

At this time, data in the HIRD<sup>SM</sup> are available for 14 plans between January 1, 2006 and March 31, 2014. There are generally two types of patients who exist in the HIRD. The first are termed fully insured and for these patients the insurer (WellPoint) assumes the responsibility for all risk of the plan. The second population is termed administrative services only (ASO) and for these patients the employer assumes responsibility for all risk of the plan and the employer only purchases administrative services from the insurer.

These differences are administrative, however, and there is not expected to be any differences in terms of the claims completeness or availability of claims profile details for adjudication between these two subgroups of patients. Hence, both the fully insured and ASO patients can be successfully used for the epidemiology study.

### 3.4 STUDY POPULATION

New users of dronedarone, amiodarone, sotalol, flecainide, dofetilide, and propafenone will define the Study Drug Cohorts.

#### 3.4.1 Study Period

Study start date - July 20, 2008, study end date – September 30, 2014. The baseline period is defined as 365 days prior to and including the index date. See [Figure 1](#).

**Figure 1. Patient Selection**

### 3.4.2 Inclusion / Exclusion Criteria

Patients must meet the following criteria to be included in the final Study Drug Cohorts.

#### 3.4.2.1 Inclusion Criteria

- A new prescription dispensed for any of the following anti-arrhythmic agents: **dronedarone, amiodarone, sotalol, flecainide, dofetilide, or propafenone** dispensed between July 20, 2009 (the dronedarone launch date in the US) and March 31, 2014 (See [Appendix A.1](#)). The earliest occurrence among these drugs of interest observed will determine the **index study cohort** assignment, and the date of the first study medication within the assigned cohort will be defined as the **Index Date**;
- No use of the index study drug during the baseline period. Use of non-index study drugs during baseline period is allowed;
- Patients aged 18 years and older as of their index date;
- 365 days of continuous eligibility prior to and including the index date;
- Diagnosed with atrial fibrillation (AF, ICD-9-CM diagnosis code 427.31) during the baseline period.

#### 3.4.2.2 Exclusion Criteria

- Unknown gender;
- Index study drug use during the baseline period;
- Less than 365 days of continuous eligibility prior to and including the index date;
- Absence of a diagnosis of AF during the baseline period;
- A diagnosis for cancer, organ transplant, HIV, or women who were pregnant or became pregnant during the baseline period (See [Appendix A.2](#)).

### 3.4.3 Additional Screening

Each final Study Drug Cohort will further exclude patients with baseline occurrences of the outcome event of interest and outcome-related conditions, separately, to better ensure that the outcome event post index is truly an incident outcome event and not a recurrence of one from the baseline period. This results in separate outcome event study cohorts.

#### 3.4.3.1 Serious Liver Injury/Disease Cohort Screening

To create the SLD Study Cohorts – patients in the final Study Drug Cohorts with any baseline occurrence (inpatient or outpatient) regardless of institution type (e.g., acute care hospital, skilled nursing facility, hospice, etc...) of the following conditions ([Appendix B.1](#)):

- Serious liver injury/disease outcome event;
- History of viral hepatitis; or

- History of hereditary conditions (e.g., Wilson's disease, hemochromatosis, galactosemia, Alagille syndrome, alpha-1 antitrypsin deficiency, type 1 glycogen storage disease)

will be excluded. The remaining patients form the SLD Study Cohorts.

#### **3.4.3.2 Interstitial Lung Disease Cohort Screening**

For ILD – a narrow and a broad outcome event definition will be used. To create the ILD-Narrow Study Cohorts – patients in the final Study Drug Cohorts with any baseline occurrence (inpatient or outpatient) regardless of institution type (e.g., acute care hospital, skilled nursing facility, hospice, etc...) of the following diseases ([Appendix C.1.1](#)):

- Interstitial lung disease outcome event – narrow definition;
- History of pneumonia; or
- History of sarcoidosis

will be excluded. The remaining patients form the ILD-Narrow Study Cohorts.

A sensitivity analysis will be conducted that uses a broader definition of ILD for baseline exclusionary screening and suspected outcome event identification.

To create the ILD-Broad Study Cohorts for the broader ILD definition – patients in the final Study Drug Cohorts with any baseline occurrence (inpatient or outpatient) regardless of institution type (e.g., acute care hospital, skilled nursing facility, hospice, etc...) of the following diseases ([Appendix C.2.1](#)):

- Interstitial lung disease outcome event – broad definition;
- History of pneumonia; or
- History of sarcoidosis

will be excluded. The remaining patients form the ILD-Broad Study Cohorts.

### **3.5 TREATMENT EPISODES, PATIENT FOLLOW-UP AND RISK PERIODS**

A **treatment episode** will be defined as a continuous period starting on the date a study drug is dispensed, and continuing for the duration of the prescription's days' supply. In cases where there is a gap of fewer than 30 days between the date on which a prescription's days' supply ends, and the dispensing date of a subsequent prescription for the same drug, the subsequent prescription will be considered a continuation of the first treatment episode.

A treatment episode ends on the date of the end of days' supply for the last prescription in the episode, plus 30 days (added as a risk window to account for potential non-compliance or missed doses). In cases where a different study drug is dispensed (switch treatment) prior to the end of a treatment episode (i.e., a treatment episode for the new drug begins), the end date of the first episode will be changed to the day preceding the start of the new switch treatment episode. A treatment episode end date will also be changed to the earliest of date of death, end of health plan eligibility or end of study, should any of those events occur prior to the calculated end of a treatment episode.

The **index treatment episode** will be the episode that begins on a patient's index date. See [Figure 2](#).

**Follow-up period** begins with the day after the index date and ends at the first occurrence of either the end of the study period, end of eligibility, or death.

Risk Periods for each of the outcome events of interest are defined as follows:

**SLD Risk Period** is defined as the period that begins the day after the Index Date and continues until the earliest occurrence of the outcome, the end of eligibility, death, or the end of the index treatment episode.

**ILD Risk Period 1** is defined as the period that begins the day after the Index Date and continues until the earliest occurrence of the outcome, the end of eligibility, death, or the end of the study period.

**ILD Risk Period 2 (sensitivity analysis)** is defined as the period that begins the day after the Index Date and continues until the earliest occurrence of the outcome, the end of eligibility, death, or the end of the index treatment episode.

**Figure 2. Index Treatment Episode Identification / SLD Follow-up Period Identification**

### 3.6 OUTCOME EVENTS OF INTEREST

The two outcome events of interest are incident cases associated with a hospitalization for:

- Serious liver injury/disease (SLD) during the SLD Risk Period;
- Interstitial lung disease (ILD) during ILD Risk Period 1.

Each outcome event will be analyzed separately; therefore, an occurrence of one outcome event does not censor the follow up for the other outcome event. Only the first hospitalized outcome event occurrence will be assessed in each of the respective outcome event analyses. Hospitalizations will be restricted to acute care hospital and skilled nursing facility settings only.

#### 3.6.1 SERIOUS LIVER INJURY/DISEASE (SLD) OUTCOME EVENT

Suspected SLD outcome events will be identified by inpatient ICD-9-CM diagnosis / procedure codes, or CPT<sup>®</sup> procedure codes (see [Appendix B.2](#)). The date of the first hospitalized occurrence of one of these codes must occur within the SLD Risk Period to be selected for adjudication.

##### 3.6.1.1 Identifying Suspected SLD Outcome Events for Adjudication

Within the SLD Study Cohorts, suspected SLD outcome events will be identified via a diagnostic-specific algorithm for adjudication review based on the occurrence of ICD-9-CM diagnosis and procedure codes, or CPT<sup>®</sup> codes within the SLD Risk Period. See [Figure 3](#).

Patients will be selected for adjudication review if the first occurrence of any of the following codes appears among the hospital discharge diagnoses (from the facility record), occurring within the SLD Risk Period. The admission date of the hospitalization with an SLD defining code must fall within the SLD Risk Period. The following codes reflect liver injury/disease and will be referred to as **Group A Codes** ([Appendix B.3](#)):

##### **ICD-9-CM Diagnosis Codes (does not need to be Primary Discharge Diagnosis)**

570 Acute and subacute necrosis of liver  
572.2 Hepatic coma  
572.4 Hepatorenal syndrome  
V42.7 Liver replaced by transplant

##### **ICD-9-CM Procedures Codes**

50.5 Liver transplant  
50.51 Auxiliary liver transplant  
50.59 Other transplant of liver

##### **CPT<sup>®</sup> Procedure Codes**

47135 Liver allotransplantation; orthotopic, partial or whole  
47136 Liver allotransplantation; heterotopic, partial or whole

CPT Copyright 2013 American Medical Association. All rights reserved. CPT is a registered trademark of the American Medical Association.

A second set of codes, **Group B Codes** ([Appendix B.4](#)) which reflect highly suspicious, suggestive serious liver disease will also trigger adjudication review. Occurrence of the following ICD-9-CM diagnosis codes after the index date must be a primary inpatient discharge diagnosis (from the facility record), to select patients for adjudication review. The procedure codes may occur in any position during an inpatient stay for that patient. The admission date of the hospitalization with an SLD defining code must fall within the SLD Risk Period.

**ICD-9-CM Diagnosis Codes (must be primary discharge diagnosis):**

277.4 Disorders of bilirubin excretion  
 571.5 Cirrhosis of liver without mention of alcohol  
 572.8 Other sequelae of chronic liver disease  
 573.0 Chronic passive congestion of liver  
 573.3 Hepatitis, unspecified  
 573.8 Other specified disorders of liver  
 573.9 Unspecified disorder of liver  
 782.4 Jaundice, unspecified  
 794.8 Nonspecific abnormal results of liver function test

**ICD-9-CM Procedure Codes**

50.11 Closed (percutaneous) [needle] biopsy of liver  
 50.12 Open biopsy of liver  
 50.13 Transjugular liver biopsy  
 50.14 Laparoscopic liver biopsy  
 50.91 Percutaneous aspiration of liver

**CPT® Procedure Codes**

47000 Biopsy of liver, needle; percutaneous  
 47001 Biopsy of liver, needle; done at time of other major procedure  
 47100 Biopsy of liver, wedge  
 78205 Liver imaging (SPECT)  
 78206 Liver imaging (SPECT); with vascular flow

---

CPT Copyright 2013 American Medical Association. All rights reserved. CPT is a registered trademark of the American Medical Association.

The codes used to define the SLD outcome event (Group A and Group B) were based on a definition previously developed by K Arnold Chan et al, 2003<sup>5</sup> but were slightly modified. Removed from the SLD definition was 789.1 Hepatomegaly, and 791.4 Biliuria; and one code was included – 572.8 Other sequelae of chronic liver disease. The Group A codes were validated for the Mini-Sentinel Project by V. Lo Re et al. 2013.<sup>6</sup> [Appendix B.5](#) provides a flowchart that illustrates the algorithm to select patients for SLD adjudication review.

### 3.6.2 INTERSTITIAL LUNG DISEASE (ILD)

Suspect ILD outcome events will be identified based on inpatient ICD-9-CM diagnosis codes only. The first hospitalization within the Risk period with a discharge diagnosis code meeting the outcome event definition will be identified as the suspect ILD outcome event. The ILD diagnosis code does not need to be the primary discharge diagnosis (from the facility

record). The admission date of that first hospitalization will be assigned as the suspect ILD outcome event date. Patients will only be counted once for the ILD outcome event regardless of subsequent occurrences of ILD outcome event diagnoses.

### 3.6.2.1 Identifying Suspected ILD Outcome Events for Adjudication

ILD may manifest itself within a few days or weeks after exposure, or take longer to appear (e.g., months or years). Due to ILD's non-specific clinical presentations, a broad range of diagnoses may be assigned to ILD patients. In consideration of these complexities, two definitions (narrow and broad) will be used to define suspected ILD outcome events. Also, two Risk periods will be screened given the timeframe in which it manifests itself. **Table i** lists the primary analysis and the sensitivity analyses that will be conducted in the DoD database for the ILD outcome event. [HealthCore will conduct the sensitivity analyses in HIRD upon request]. Also, [Figure 4a](#) and [Figure 4b](#) illustrate the suspected ILD selection process.

**Table i. Analyses to be conducted for ILD Outcome Event**

| Analysis Type                                                         | ILD Definition | Observation Timeframe |
|-----------------------------------------------------------------------|----------------|-----------------------|
| Primary analysis (follow-up until end of study)                       | Narrow         | ILD Risk Period 1     |
| Sensitivity analysis (follow-up until end of index treatment episode) | Narrow         | ILD Risk Period 2     |
| Sensitivity analysis (follow-up until end of study)                   | Broad          | ILD Risk Period 1     |
| Sensitivity analysis (follow-up until end of index treatment episode) | Broad          | ILD Risk Period 2     |

#### ILD Narrow Outcome Event Definition

The ILD outcome event – narrow definition is the primary focus for this analysis. The narrow definition ([Appendix C.1.2](#)) is based on the codes described in a systematic review for the Mini-Sentinel Project by Natalie Jones et al. 2012.<sup>7</sup> ILD Risk Period 1 will be screened for the following codes, any of which must be a hospital discharge diagnosis code (from the facility record, any position) to be selected:

#### **ILD Narrow Definition - ICD-9-CM Diagnosis Codes**

- 515 Post-inflammatory pulmonary fibrosis
- 516.3 Idiopathic fibrosing alveolitis
  - 516.30 Idiopathic interstitial pneumonia, not otherwise specified (IIP)
  - 516.31 Idiopathic pulmonary fibrosis (IPF)
  - 516.32 Idiopathic non-specific interstitial pneumonitis (NSIP)
  - 516.33 Acute interstitial pneumonitis (AIP)
  - 516.34 Respiratory bronchiolitis interstitial lung disease (RB-ILD)
  - 516.35 Idiopathic lymphoid interstitial pneumonia (LIP)
  - 516.36 Cryptogenic organizing pneumonia (COP)

- 516.37 Desquamative interstitial pneumonia (DIP)
- 516.8 Other specified alveolar and parietoalveolar pneumonopathies
- 516.9 Unspecified alveolar and parietoalveolar pneumonopathy

ILD Risk Period 2, which mirrors the index treatment episode timeframe, will be screened for outcome events using the same ILD narrow definition.

There is little literature that provides administrative and claims data-based definitions / coding algorithms to identify ILD. None of the ICD-9-CM codes listed above have been validated. Use of these codes may not provide the desired levels of sensitivity and specificity.

[Appendix C.1.3](#) illustrates the process to select patients based on the narrow definition for ILD adjudication review.

#### ILD Broad Outcome Event Definition

The ILD Broad outcome event definition, defined below and in [Appendix C.2.2](#), will be used to screen for suspected ILD outcome events in both ILD Risk Period 1 and ILD Risk Period 2. The following codes define ILD Broad outcome events, any of which must be a hospital discharge diagnosis code (from the facility record, any position) to be selected:

#### **ILD Broad Definition - ICD-9-CM Diagnosis Codes**

- 495.9 Unspecified allergic alveolitis and pneumonitis
- 515 Post-inflammatory pulmonary fibrosis
- 516.3 Idiopathic fibrosing alveolitis
  - 516.30 Idiopathic interstitial pneumonia, not otherwise specified (IIP)
  - 516.31 Idiopathic pulmonary fibrosis (IPF)
  - 516.32 Idiopathic non-specific interstitial pneumonitis (NSIP)
  - 516.33 Acute interstitial pneumonitis (AIP)
  - 516.34 Respiratory bronchiolitis interstitial lung disease (RB-ILD)
  - 516.35 Idiopathic lymphoid interstitial pneumonia (LIP)
  - 516.36 Cryptogenic organizing pneumonia (COP)
  - 516.37 Desquamative interstitial pneumonia (DIP)
- 516.8 Other specified alveolar and parietoalveolar pneumonopathies
- 516.9 Unspecified alveolar and parietoalveolar pneumonopathy
- 518.82 Other pulmonary insufficiency, not elsewhere classified (e.g., adult respiratory distress syndrome)

As noted above, none of the ICD-9-CM codes listed above have been validated. [Appendix C.2.3](#) illustrates the process to select patients for suspected ILD Broad outcome event adjudication review.

### 3.7 ADJUDICATION OF OUTCOME EVENTS

Any patient with one or both suspected outcome events identified will have his/her medical history surrounding the suspected event(s) reviewed by the respective Adjudication Panels. The adjudication process will involve a manual review of all medical and prescription history related to the study outcomes. The data will be formatted in such a manner that all diagnoses, procedures, non-study drug dispensings, and other available data will be presented chronologically for each outcome event for Panel Members to review.

Adjudication Panel Members will be blinded to study drug exposure (drug name, quantity, and formulation), as well as all patient-identifying information. Patient-related documents will be codified with an encrypted patient number. Each member will independently review each case and determine, given the patient profile characteristics and timing of the outcome event relative to the blinded study drug's exposure, whether the suspected outcome event was likely to have occurred.

Each Adjudication Panel member will indicate their determination from the list below for each suspected outcome:

- **“Yes”** – the patient profile contains diagnostic/procedural coding that meets the outcome event criteria,
- **“No”** – the patient profile does not have diagnostic/procedural coding that meets the outcome event criteria, or
- **“Indeterminate”** – the patient profile does not have diagnostic/ procedural coding that meets the outcome event criteria, but the clinical picture suggests an outcome event may have occurred.

Panel member decisions will be tabulated for each outcome event. Outcome events with unanimous agreement will have that determination assigned in the database. No further discussion will be needed. If disagreement between the Panel members exists, the patient profile will be discussed in a formal meeting where all three Panel members and the Chair are present. The Chair will lead the discussion. Each panel member will present their reasoning for their decision, followed by a final vote. If the final decision vote is unanimous then that decision will be assigned to that outcome event in the database; otherwise the outcome event will be assigned as “Indeterminate”.

**Figure 3. Identifying Patients with Suspected SLD Outcome Event during the SLD Risk Period for Adjudication**

**Figure 4a. Identifying Patients with Suspected ILD Outcome Event during the ILD Risk Period 1 for Adjudication**

**Figure 4b. Identifying Patients with Suspected ILD Outcome Event during the ILD Risk Period 2 for Adjudication**

## 3.8 COVARIATES

### 3.8.1 Confounder Definition

A confounder is a variable that is related to both the exposure and the outcome event of interest.

### 3.8.2 Identification of Possible Confounders/Risk Factors

These variables will be identified in each data source in their respective eligibility files or notes, ICD-9-CM diagnosis or procedure codes, and/or medication files.

#### 3.8.2.1 *SLD, potential risk factors/confounders include (See [Appendix D](#))*<sup>8</sup>:

- History of Alcoholism;
- History of Bile duct disorders;
- History of Congestive heart failure;
- History of Diabetes;
- History of Obesity;
- Prior use of hepatotoxic medications.\*

\* Systemic use only.

#### 3.8.2.2 *ILD, potential risk factors/confounders include (See [Appendix E](#))*<sup>9</sup>:

- History of Asthma;
- History of Bronchitis, excluding acute bronchitis;
- History of Chronic obstructive pulmonary disease;
- History of Connective tissue disease;
- History of Exposure to occupational and environmental toxins;
- History of Gastroesophageal reflux disease;
- Prior use of agents associated with drug-induced pulmonary disease<sup>\*10</sup>;
- Prior use of Therapeutic oxygen treatment.

\* Systemic use only.

### 3.8.3 Handling of confounders

Propensity score matching will be used to balance known confounders for this study. See [Section 4.1 Propensity Score Matching](#).

### 3.9 SAMPLE SIZE AND POWER CALCULATION

The following chart shows the number of dronedarone subjects required to provide 80% power, at the 0.05 alpha level, to detect hazard ratios of 2.0, 3.0, and 4.0, for various values of the comparator (reference) group incidence rate:

| Incidence Rate, % / year Events / 100 patient-years In the Comparator Group | # of Subjects Needed in Each Cohort |              |        |
|-----------------------------------------------------------------------------|-------------------------------------|--------------|--------|
|                                                                             | HR=2.0                              | HR=3.0       | HR=4.0 |
| 0.01%/year (1 / 10,000 patient-years)                                       | 108,947                             | 38,553       | 22,698 |
| 0.02%/year (1 / 5,000 patient-years)                                        | 54,477                              | 19,278       | 11,351 |

[Software: PS - Power and Sample Size Calculations, version 3.0, by W. D. Dupont and W. D. Plummer (Vanderbilt University).]

The sample-size requirements were estimated based on the following statistical design parameters and assumptions:

- **Type of Analysis:** Comparison of event-free “survival” time between the dronedarone-exposed cohort and a comparator (reference) cohort, by means of the log-rank test, or Cox proportional-hazards regression
- **Alpha Level:** 0.05 ( $p \leq 0.05$  considered statistically significant)
- **Power:** 80% (80% chance of obtaining a significant result if a true difference in event-free survival between cohorts exists, and is of an important magnitude)
- **Effect Size of Importance:** Hazard Ratio = 3.0
- **Incidence Rate in the Comparator (Reference) Group:** 1 event/1,000 patient-years
- **Group size Ratio:** 1:1 (equal numbers of dronedarone and comparator subjects), consistent with 1:1 propensity-score matching
- **Accrual Interval:** 5 years (July 2009 through March 2014)
- **Follow-up Beyond Last Accrual:** 0 months (index dates can range from July 2009 through September 2014)

Initial baseline characteristics will be reported for each of the six cohorts. Cohorts that do not meet the sample size requirement will not be subject to propensity score matching. Initial baseline characteristics will be presented but no further analysis will be conducted.

Background data to support the sample size and power calculations:

Data were provided by Sanofi from an internal Sanofi-conducted study (Safety Study Report – Dronedarone, SR33589, GPE Pharmacoepidemiology, August 2, 2011). The study found the following:

| Outcome Studied                              | Incidence Rate /<br>1000 PYs |
|----------------------------------------------|------------------------------|
| Incidence of acute liver injury <sup>‡</sup> | 7.6 (0.9 - 14.2)             |
| Incidence of interstitial lung disease       | 21.9 (10.5 - 33.4)           |

<sup>‡</sup> Defined as a primary dx of acute or sub-acute necrosis of liver, hepatic coma, toxic hepatitis, or liver transplant in hospital by ICD-9-CM and CPT codes.

It is reasonable to state that 1 per 1,000 PYs is a conservative estimate used in the sample size calculations. Therefore, for a HR of 3.0, the required sample size is 3,860 in each patient group.

## 4 STATISTICAL ANALYSIS

In order to compare rates of serious liver injury/disease and interstitial lung disease between cohorts, patients in each of the five comparator cohorts will be propensity score matched to patients in the dronedarone cohort. Since dronedarone is the newest drug to the market and there are likely selection factors that influence the decision to initiate treatment with this drug (as well as the decision to treat with the other study drugs), propensity score matching will be utilized to balance, as much as possible, known measureable confounders that may influence drug selection.

### 4.1 PROPENSITY SCORE MATCHING

Propensity score matching (PSM) is a statistical technique that attempts to isolate the estimated effect of a treatment or exposure by accounting for the covariates that predict the likelihood of the exposure. PSM employs a predicted probability of exposure based on observed predictors, usually obtained from logistic regression. The technique provides a close adjustment for differences in covariates at baseline and thereby reduces bias due to confounding variables that could be found in an estimate of the exposure effect obtained from simply comparing outcomes among exposed subjects (in this case, the dronedarone cohort) versus unexposed subjects (the comparator cohorts).

An attempt will be made to match one patient from each of the five comparator cohorts (amiodarone, sotalol, flecainide, propafenone, and dofetilide) to each patient in the dronedarone cohort according to propensity score (PS). The matching will be conducted without replacement. Specifically, five separate subsets of the DoD and HealthCore database, each containing all of the dronedarone patients and patients from one of the comparator cohorts will be created. The same reduced logistic model (derived from the dataset combining all cohorts) will be independently fitted to each of the subsets and the results used to calculate propensity scores for each patient in the subset. Within each subset, the absolute difference between PS scores of each dronedarone and comparator patient will be calculated. Selecting dronedarone patients in random order, the closest patient in each comparator cohort will be selected for matching (from remaining comparators not already matched to another dronedarone patient). If matches for a given dronedarone subject, are not found across all comparator groups then the dronedarone subject will be considered unmatchable and excluded from the analysis. (See [Figure 5](#).)

For the dataset of matched patients baseline covariate distributions should be essentially identical for all cohorts, and dronedarone users and their comparators can be compared using transparent, simpler unmatched methods that do not require adjustments for confounders. For example, Kaplan-Meier event-free survival curves can be compared between cohorts with a log-rank test.

The exact PSM process will be described fully in a separate Statistical Analysis Plan (SAP).

[Appendix F](#) contains the initial list of variables to be included in the PSM Model.

**Figure 5. Propensity Score Matching**

For this study a nearest-neighbor-within-caliper matching algorithm will be employed.

## 4.2 EVALUATION OF PROPENSITY SCORE MODEL AND MATCHING

The adequacy of PS-based matching can be assessed in several ways:

- The goodness of fit of the logistic model will be examined using Lemeshow<sup>11</sup> test for calibration and by the C-statistic for discrimination.
- For caliper-based PS-matching, the choice of caliper width should be justified by sensitivity analysis of a range of caliper widths, demonstrating that the chosen width strikes an acceptable balance between number of potential matches and closeness of the match (described below).
- The baseline values of the potential confounders will be examined to ensure comparability across the matched cohorts using standard differences or other appropriate tests.
- The differences in outcome event measures between cohorts should not vary systematically with PS, as assessed by comparing the results of analyses stratified by PS-quintile, or by including PS as a covariate in a multivariate analysis of the outcome.

### 4.2.1 Fit of the Logistic Model

The adequacy of the logistic model to represent the observed dependence of exposure on the baseline values of the available potential confounders will be checked in several ways.

- The fit will be evaluated graphically. All records will be sorted by PS and a graph will be prepared of the cumulative sum of the PS values (y) will be generated, vs. the corresponding cumulative fraction of subjects who were actually in the exposed category (x). If the data actually conforms to the fitted logistic model, the plotted points should lie exactly along a straight diagonal line between (0,0) and (1,1).
- The adequacy of the logistic fit will also be evaluated inferentially by the Lemeshow test for calibration and by the C statistic for discrimination.

#### **4.2.2 Effect of Caliper Width**

The log-odds of the probability calculated by the reduced logistic regression model will be used as the PS. (The log-odds is the linear portion of the logistic model, prior to transformation into a probability.) Caliper width for nearest-neighbor matching will be based on a fraction of the standard deviation of the PS. Several caliper-width strategies will be evaluated, and a choice will be made so as to achieve an acceptable tradeoff between poor matching (caliper too wide) and excessive exclusion from the matched population (caliper too narrow).

#### **4.2.3 Balance of Baseline Values between Matched Cohorts**

Tables summarizing baseline values of the potential confounders for patients in each of the matched cohorts will be generated (mean, standard deviation, median, etc.). Standardized differences will be calculated to compare the balance of baseline covariate values between the dronedarone patients and patients in each comparator cohort (means for continuous variables and proportions for dichotomous variables) both before and after PS matching. Groups will be considered balanced if the absolute value of the standardized difference between the dronedarone group and each comparator group is less than 0.1 for all of the variables.

#### **4.2.4 Variability of Hazard Ratios with PS for the Primary Outcome**

Unlike randomization, which (in the long run) will compensate for the effects of all known and unknown confounders between groups, PS matching can hope to compensate only for known confounders that are included in the PS model. Therefore, even in a study where PS-matching has been executed perfectly, and the cohorts are completely balanced for all known confounders, the outcome event can be affected by unknown confounders that remain unbalanced between cohorts. This is an intrinsic limitation of PS matching. This will be tested for in two ways:

- Running analyses stratified by PS-based groups (such as quartiles or quintiles), and checking whether the outcomes vary systematically across the sequenced strata.
- Incorporating the PS as a covariate (with interaction terms between PS and the cohorts), and checking whether the coefficients of the interaction terms are significantly different from zero.

If PS-dependence of outcomes is observed, it means that the effect of comparator drug on the outcome, relative to dronedarone, could be biased by the unknown (and uncompensated) confounders, and must be interpreted with caution.

### 4.3 ANALYTIC APPROACH

#### 4.3.1 Descriptive Summaries

Data will be tabulated to show (see [Section 7 Tables and Figures](#)), for each outcome, for each exposure group:

- The number of subjects with and without the event, the proportion of subjects with the event with its 95% confidence interval, and the p-value for the comparison of event proportions between the comparator drugs and dronedarone (by the Fisher Exact Test<sup>12</sup>).
- The number of patient-years of observation, the number of incident events, raw event rate with its 95% confidence interval, and the p-value for the comparison of event rates between the comparator drugs and dronedarone. This comparison will be done using hazard ratios.
- Hospitalizations prior to the index date will be identified and tabulated, as well as their proximity to the index date for stratification purposes or for further analysis.
- Adjudicated outcome events:
  - Stratified by “Yes”, “No”, and “Indeterminate” decisions;
  - Stratified by different variables: demographic, concomitant drug, concomitant diseases;
  - Stratified according to latency periods: 1 month, >1 to 6 months, > 6 months continuous exposure from the index date;
  - Exploratory evaluation of potential confounders.

#### 4.3.2 Controlling for Type-1 Errors

In this safety study, the Type 1 error rate will be controlled to a 0.05 test-wise alpha level. Significance will be inferred for any analysis in which the p-value is less than 0.05 for the comparison between the dronedarone cohort and a comparator (reference) cohort. No adjustments for multiple comparisons will be applied.

The EMA says the following about multiplicity in testing safety variables:

“In the case of adverse effects, p-values are of very limited value, [because] substantial differences (expressed as relative risk or risk differences will raise concern, depending on seriousness, severity or outcome, irrespective of the p-value observed.

In those cases where a large number of statistical test procedures are used to serve as a flagging device to signal a potential risk caused by the investigational drug, it can

generally be stated that an adjustment for multiplicity is counterproductive for considerations of safety. It is clear in that in this situation there is no control over the type I error for a single hypothesis, and the importance and plausibility of such results will depend on prior knowledge of the pharmacology of the drug.”

### **4.3.3 Survival Analyses**

#### **4.3.3.1 *Cox proportional-hazards regression analysis***

Separate Cox regression<sup>14</sup> models will be carried out for each outcome, with exposure group (dronedarone as the reference drug) as the main independent variable, and incorporating any other covariates of interest that were not included in the propensity score. Results will be presented as adjusted hazard ratios, with 95% confidence intervals and p-values, for each comparator drug relative to dronedarone.

The following analyses will be conducted for both ILD Definitions. Since ILD outcome events will be identified throughout the risk period, an outcome event may occur after a study drug switch. The primary ILD analysis will be based on an intention to treat approach that will count exposure from the index date through to the end of follow-up. A sensitivity analysis will be conducted looking only at the index treatment episode for ILD outcomes.

The Schoenfeld residual test will be performed to test the proportionality assumption of all analyses.<sup>15</sup>

#### **4.3.3.2 *Kaplan Meier Survival Estimates***

Kaplan-Meier survival curves will be prepared and graphed, with one graph for each outcome event (i.e., SLD, ILD-primary, ILD-secondary), displaying separate survival curves for each exposure group.<sup>13</sup> The log-rank test will be performed to determine if there is a statistically significant difference in the curves.

### **4.3.4 Sensitivity Analyses (DoD Dataset Only)**

#### **4.3.4.1 *Addition of laboratory data to SLD***

An additional sensitivity analysis will be performed on the SLD subset of the population that have available laboratory test results (e.g., alanine transaminase levels, aspartate transaminase levels, bilirubin levels) to 1) to determine if it is representative of the database population, and 2) to determine if this information adds value to the existing data.

#### **4.3.4.2 *Addition of smoking data to ILD***

If possible, an additional sensitivity analysis will be performed on the ILD subset of the population that has available smoking status information (e.g., smoker, non-smoker).

#### **4.3.5 Combination of results from separate databases**

The databases have structural and content differences that preclude the simple pooling of subjects from both databases for matching and analysis. These differences cannot be mitigated by simply including a database-identification categorical variable as a covariate in the survival model. Analyses will be run separately for each database, and the results of the analyses (hazard ratios, confidence intervals, p values, etc.) will be described.

Individual database analyses will not likely be conducted in parallel. The epidemiological study will begin with the DoD database, followed by the HIRD<sup>sm</sup> database when sample size targets have been reached. The Table below highlights the anticipate99d timelines for both databases.

Assumes Dofetilide and Propafenone cohorts do not meet the sample size requirement and are excluded from further analysis.

**SLD-Figure 1: Sample Kaplan Meier Survival Curve of SLD Adjudicated Events: DoD Database – July 20, 2009 to September 30, 2014**

**Two** sets of ILD Tables will be provided. One set for ILD-Narrow definition and one set for the ILD-Broad definition.

Tables **ILD-Table 1.1** to **ILD-Table 1.8** contain the primary analysis for ILD-Narrow definition (looking at ILD-Narrow outcome events within Risk Period 1). Tables **ILD-Table 1.9** and **ILD-Table 1.10** display the results for a sensitivity analysis conducted on the ILD-Narrow definition but looking at ILD-Narrow outcome events within ILD Risk Period 2.

Tables **ILD-Table 2.1** - **ILD-Table 2.8** show the sensitivity analysis results for the ILD-Broad definition (looking at ILD-Broad outcome events within ILD Risk Period 1). Tables **ILD-Table 2.9** - **ILD-Table 2.10** display the results for a sensitivity analysis conducted on the ILD-Broad definition but looking at ILD-Broad outcome events within ILD Risk Period 2.

**ILD-Table 1.1: Baseline Characteristics Of Patients In Each Of The ILD-Narrow Study Cohorts Before Propensity Score Matching: DoD Database – July 20, 2009 to September 30, 2014**

| Characteristics, N (%)                                | Dronedarone<br>(N= ) | Amiodarone<br>(N= ) | Sotalol<br>(N= ) | Flecainide<br>(N= ) | Dofetilide<br>(N= ) | Propafenone<br>(N= ) |
|-------------------------------------------------------|----------------------|---------------------|------------------|---------------------|---------------------|----------------------|
| Age at cohort entry date, N (%)                       |                      |                     |                  |                     |                     |                      |

## APPENDIX A.2 EXCLUSIONARY CONDITIONS DEFINITIONS

### History of Cancer

#### ICD-9-CM Diagnosis Range

140 – 209.xx Cancer

V10.x Personal history of malignant neoplasms

### History of Organ Transplant

#### ICD-9-CM Diagnoses

996.81 Complications of a transplanted kidney  
996.82 Complications of a transplanted liver  
996.83 Complications of a transplanted heart  
996.84 Complications of a transplanted lung  
996.86 Complications of a transplanted pancreas  
V42.0x Transplant – Kidney, status post  
V42.1x Transplant – Heart  
V42.6x Transplant – Lung  
V42.7x Transplant – Liver  
V42.83 Pancreas replaced by transplant

#### ICD-9-CM Procedures

33.5 Lung transplant  
33.50 Lung transplantation, not otherwise specified  
33.51 Unilateral lung transplantation  
33.52 Bilateral lung transplantation  
33.6 Combined heart-lung transplantation  
37.51 Heart transplantation  
37.55 Removal of internal biventricular heart replacement system  
~~50.11 Closed (percutaneous) [needle] biopsy of liver~~  
~~50.12 Open biopsy of liver~~  
~~50.13 Transjugular liver biopsy~~  
~~50.14 Laparoscopic liver biopsy~~  
50.5 Liver transplant  
50.51 Auxiliary liver transplant  
50.59 Other transplant of liver  
50.91 Percutaneous aspiration of liver  
52.8 Transplant of pancreas  
52.80 Pancreatic transplant, not otherwise specified  
52.81 Reimplantation of pancreatic tissue  
52.82 Homotransplant of pancreas  
52.83 Heterotransplant of pancreas  
52.84 Autotransplantation of cells of islets of langerhans  
52.85 Allotransplantation of cells of islets of langerhans  
52.86 Transplantation of cells of islets of langerhans, not otherwise specified  
55.53 Removal transplant/rejected kidney  
55.69 Other kidney transplantation

#### CPT® Procedures

32851 Lung transplant, single; without cardiopulmonary bypass  
32852 Lung transplant, single; with cardiopulmonary bypass

- 32853 Lung transplant, double (bilateral sequential or en bloc); without cardiopulmonary bypass
- 32854 Lung transplant, double (bilateral sequential or en bloc); with cardiopulmonary bypass
- 33935 Heart-lung transplant with recipient cardiectomy-pneumonectomy
- 33945 Heart transplant, with or without recipient cardiectomy
- 47135 Liver allotransplantation; orthotopic, partial or whole, from cadaver or living donor, any age
- 47136 Liver allotransplantation; heterotopic, partial or whole, from cadaver or living donor, any age
- 48160 Pancreatectomy, total or subtotal, with autologous transplantation of pancreas or pancreatic islet cells
- 48554 Transplantation of pancreatic allograft
- 48556 Removal of transplanted pancreatic allograft
- 50360 Renal allotransplantation, implantation of graft; without recipient nephrectomy
- 50365 Renal allotransplantation, implantation of graft; with recipient nephrectomy
- 50370 Removal of transplanted renal allograft
- 50380 Renal autotransplantation, reimplantation of kidney

## History of HIV

### ICD-9-CM Diagnosis

- 042 Human immunodeficiency virus (HIV) disease

## History of Pregnancy (Index date minus 280 days, through index date minus 1)

### ICD-9-CM Diagnoses

- V22 Normal pregnancy
- V22.0 Supervision of normal first pregnancy
- V22.1 Supervision of other normal pregnancy
- V22.2 Pregnant state incidental
- V23 Supervision of high-risk pregnancy
- V23.0 Supervision of high-risk pregnancy with history of infertility
- V23.1 Supervision of high-risk pregnancy with history of trophoblastic disease
- V23.2 Supervision of high-risk pregnancy with history of abortion
- V23.3 Supervision of high-risk pregnancy with grand multiparity
- V23.4 Supervision of high-risk pregnancy with other poor obstetric history
- V23.41 Supervision of high-risk pregnancy with history of pre-term labor
- V23.42 Supervision of high-risk pregnancy with history of ectopic pregnancy
- V23.49 Supervision of high-risk pregnancy with other poor obstetric history
- V23.5 Supervision of high-risk pregnancy with other poor reproductive history
- V23.7 Supervision of high-risk pregnancy with insufficient prenatal care
- V23.8 Supervision of other high-risk pregnancy
- V23.81 Supervision of high-risk pregnancy with elderly primigravida
- V23.82 Supervision of high-risk pregnancy with elderly multigravida
- V23.83 Supervision of high-risk pregnancy with young primigravida
- V23.84 Supervision of high-risk pregnancy with young multigravida
- V23.85 Supervision of high-risk pregnancy resulting from assisted reproductive technology
- V23.86 Supervision of high-risk pregnancy with history of in utero procedure during previous pregnancy
- V23.87 Supervision of high-risk pregnancy with inconclusive fetal viability
- V23.89 Supervision of other high-risk pregnancy
- V23.9 Supervision of unspecified high-risk pregnancy
- V28 Encounter for antenatal screening of mother
- V28.0 Screening for chromosomal anomalies by amniocentesis
- V28.1 Screening for raised alpha-fetoprotein levels in amniotic fluid
- V28.2 Other antenatal screening based on amniocentesis
- V28.3 Encounter for routine screening for malformation using ultrasonics
- V28.4 Antenatal screening for fetal growth retardation using ultrasonics

- V28.5 Antenatal screening for isoimmunization
- V28.6 Antenatal screening for streptococcus b
- V28.8 Other specified antenatal screening
- V28.81 Encounter for fetal anatomic survey
- V28.82 Encounter for screening for risk of preterm labor
- V28.89 Other specified antenatal screening
- V28.9 Unspecified antenatal screening

**ICD-9-CM Procedures**

- 72 Forceps, vacuum, and breech delivery
- 72.0 Low forceps operation
- 72.1 Low forceps operation with episiotomy
- 72.2 Mid forceps operation
- 72.21 Mid forceps operation with episiotomy
- 72.29 Other mid forceps operation
- 72.3 High forceps operation
- 72.31 High forceps operation with episiotomy
- 72.39 Other high forceps operation
- 72.4 Forceps rotation of fetal head
- 72.5 Breech extraction
- 72.51 Partial breech extraction with forceps to aftercoming head
- 72.52 Other partial breech extraction
- 72.53 Total breech extraction with forceps to aftercoming head
- 72.54 Other total breech extraction
- 72.6 Forceps application to aftercoming head
- 72.7 Vacuum extraction
- 72.71 Vacuum extraction with episiotomy
- 72.79 Other vacuum extraction
- 72.8 Other specified instrumental delivery
- 72.9 Unspecified instrumental delivery
- 73 Other procedures inducing or assisting delivery
- 73.0 Artificial rupture of membranes
- 73.01 Induction of labor by artificial rupture of membranes
- 73.09 Other artificial rupture of membranes
- 73.1 Other surgical induction of labor
- 73.2 Internal and combined version and extraction
- 73.21 Internal and combined version without extraction
- 73.22 Internal and combined version with extraction
- 73.3 Failed forceps
- 73.4 Medical induction of labor
- 73.5 Manually assisted delivery
- 73.51 Manual rotation of fetal head
- 73.59 Other manually assisted delivery
- 73.6 Episiotomy
- 73.8 Operations on fetus to facilitate delivery
- 73.9 Other operations assisting delivery
- 73.91 External version assisting delivery
- 73.92 Replacement of prolapsed umbilical cord
- 73.93 Incision of cervix to assist delivery
- 73.94 Pubiotomy to assist delivery
- 73.99 Other operations assisting delivery
- 74 Cesarean section and removal of fetus
- 74.0 Classical cesarean section
- 74.1 Low cervical cesarean section
- 74.2 Extraperitoneal cesarean section
- 74.3 Removal of extratubal ectopic pregnancy
- 74.4 Cesarean section of other specified type
- 74.9 Cesarean section of unspecified type
- 74.91 Hysterotomy to terminate pregnancy
- 74.99 Other cesarean section of unspecified type
- 75 Other obstetric operations
- 75.0 Intra-amniotic injection for abortion

- 75.1 Diagnostic amniocentesis
- 75.2 Intrauterine transfusion
- 75.3 Other intrauterine operations on fetus and amnion
- 75.31 Amnioscopy
- 75.32 Fetal ekg (scalp)
- 75.33 Fetal blood sampling and biopsy
- 75.34 Other fetal monitoring
- 75.35 Other diagnostic procedures on fetus and amnion
- 75.36 Correction of fetal defect
- 75.37 Amnioinfusion
- 75.38 Fetal pulse oximetry

### **CPT® Procedures**

- 59120 Tx ectopic pregnancy abdominal/vaginal appr
- 59121 Tx ectopic pregnancy w/o salping&/oophorectomy
- 59130 Tx ectopic pregnancy abdl pregnancy
- 59135 Tx ectopic pregnancy ntrstl req tot hyst
- 59136 Tx ectopic pregnancy ntrstl prtl rescj uter
- 59140 Tx ectopic pregnancy cervical w/evacuation
- 59150 Laps tx ectopic preg w/o salping&/oophorectomy
- 59151 Laps tx ectopic preg w/salping&/oophorectomy
- 59160 Curettage postpartum
- 59200 Insertion cervical dilator separate procedure
- 59300 Episiotomy/vag rpr oth/thn attending

## **APPENDIX B.1 SERIOUS LIVER INJURY/DISEASE OUTCOME EVENT DEFINITION; BASELINE EXCLUSIONARY SCREENING**

### **ICD-9-CM Diagnosis and Procedure Codes / CPT Code Descriptions**

#### **History of Serious Liver Injury/Disease**

##### **ICD-9-CM Diagnoses**

277.4 Disorders of bilirubin excretion  
570 Acute and subacute necrosis of liver  
571.5 Cirrhosis of liver without mention of alcohol  
572.2 Hepatic coma  
572.4 Hepatorenal syndrome  
572.8 Other sequelae of chronic liver disease\*  
573.0 Chronic passive congestion of liver  
573.3 Hepatitis, unspecified  
573.8 Other specified disorders of liver  
573.9 Unspecified disorder of liver  
782.4 Jaundice, unspecified  
794.8 Nonspecific abnormal results of liver function test  
V42.7 Liver replaced by transplant

##### **ICD-9-CM Procedures**

50.11 Closed (percutaneous) [needle] biopsy of liver  
50.12 Open biopsy of liver  
50.13 Transjugular liver biopsy  
50.14 Laparoscopic liver biopsy  
50.5 Liver transplant  
50.51 Auxiliary liver transplant  
50.59 Other transplant of liver  
50.91 Percutaneous aspiration of liver

##### **CPT® Procedures**

47000 Biopsy of liver, needle; percutaneous  
47001 Biopsy of liver, needle; done at time of other major procedure  
47100 Biopsy of liver, wedge  
47135 Liver allotransplantation; orthotopic, partial or whole  
47136 Liver allotransplantation; heterotopic, partial or whole  
78205 Liver imaging (SPECT)  
78206 Liver imaging (SPECT); with vascular flow

---

#### **History of Viral Hepatitis**

##### **ICD-9-CM Diagnoses**

070.0 Viral Hepatitis A With Hepatic Coma  
070.1 Viral Hepatitis A Without Hepatic Coma  
070.2 Viral Hepatitis B With Hepatic Coma  
070.20 Viral Hepatitis B With Hepatic Coma Acute Or Unspecified Without Hepatitis Delta

070.21 Viral Hepatitis B With Hepatic Coma Acute Or Unspecified With Hepatitis Delta  
070.22 Chronic Viral Hepatitis B With Hepatic Coma Without Hepatitis Delta  
070.23 Chronic Viral Hepatitis B With Hepatic Coma With Hepatitis Delta  
070.3 Viral Hepatitis B Without Mention Of Hepatic Coma  
070.30 Viral Hepatitis B Without Hepatic Coma Acute Or Unspecified Without Hepatitis Delta  
070.31 Viral Hepatitis B Without Hepatic Coma Acute Or Unspecified With Hepatitis Delta  
070.32 Chronic Viral Hepatitis B Without Hepatic Coma Without Hepatitis Delta  
070.33 Chronic Viral Hepatitis B Without Hepatic Coma With Hepatitis Delta  
070.4 Other Specified Viral Hepatitis With Hepatic Coma  
070.41 Acute Hepatitis C With Hepatic Coma  
070.42 Hepatitis Delta Without Active Hepatitis B Disease With Hepatic Coma  
070.43 Hepatitis E With Hepatic Coma  
070.44 Chronic Hepatitis C With Hepatic Coma  
070.49 Other Specified Viral Hepatitis With Hepatic Coma  
070.5 Other Specified Viral Hepatitis Without Mention Of Hepatic Coma  
070.51 Acute Hepatitis C Without Mention Of Hepatic Coma  
070.52 Hepatitis Delta Without Active Hepatitis B Disease Or Hepatic Coma  
070.53 Hepatitis E Without Hepatic Coma  
070.54 Chronic Hepatitis C Without Hepatic Coma  
070.59 Other Specified Viral Hepatitis Without Hepatic Coma  
070.7 Unspecified Viral Hepatitis C  
070.70 Unspecified Viral Hepatitis C Without Hepatic Coma  
070.71 Unspecified Viral Hepatitis C With Hepatic Coma  
V02.61 Carrier Or Suspected Carrier Of Hepatitis B  
V02.62 Carrier Or Suspected Carrier Of Hepatitis C

---

### **Non-Specific – Other Related Hepatitis**

#### **ICD-9-CM Diagnoses**

070.6 Unspecified Viral Hepatitis With Hepatic Coma  
070.9 Unspecified Viral Hepatitis Without Hepatic Coma  
072.71 Mumps Hepatitis  
091.62 Secondary Syphilitic Hepatitis  
571.4 Chronic Hepatitis  
571.40 Chronic Hepatitis, Unspecified  
571.41 Chronic Persistent Hepatitis  
571.42 Autoimmune Hepatitis  
571.49 Other Chronic Hepatitis  
571.8 Other Chronic Nonalcoholic Liver Disease  
572.0 Abscess of Liver  
V02.6 Carrier Or Suspected Carrier Of Viral Hepatitis  
V02.60 Carrier Or Suspected Carrier Of Viral Hepatitis Unspecified  
V02.69 Carrier Or Suspected Carrier Of Other Viral Hepatitis

---

### **History of Hereditary Conditions**

#### **ICD-9-CM Diagnoses**

271.0 Glycogenosis

271.1 Galactosemia  
273.4 Alpha-1-Antitrypsin Deficiency  
275.0 Disorders Of Iron Metabolism  
275.01 Hereditary Hemochromatosis  
275.03 Other Hemochromatosis  
275.1 Disorders Of Copper Metabolism  
759.89 Other Specified Congenital Anomalies (Alagille syndrome)

---

## **APPENDIX B.2      SERIOUS LIVER INJURY/DISEASE OUTCOME EVENT DEFINITION**

\* Approved for definition inclusion on October 22, 2013.

Also approved for removal from the definition:

789.1 Hepatomegaly, and  
791.4 Biliuria

## **APPENDIX B.3      SLD OUTCOME EVENT DEFINITION - GROUP A CODES**

### **Group A Codes (usually reflects Liver Injury/Disease)**

#### **ICD-9-CM Diagnosis and Procedure Codes / CPT Code Descriptions**

**ICD-9-CM Diagnosis** (may occur in any code position; inpatient setting):

570    Acute and subacute necrosis of liver  
572.2    Hepatic coma  
572.4    Hepatorenal syndrome  
V42.7    Liver replaced by transplant

**ICD-9-CM Procedures** (may occur in any code position; inpatient setting):

50.5    Liver transplant  
50.51    Auxiliary liver transplant  
50.59    Other transplant of liver

**CPT®** (may occur in any code position; inpatient setting):

47135    Liver allotransplantation; orthotopic, partial or whole  
47136    Liver allotransplantation; heterotopic, partial or whole

---

## APPENDIX B.4 SLD OUTCOME EVENT DEFINITION - GROUP B CODES

### Group B Codes (highly suspicious, suggestive of Liver Injury/Disease)

#### ICD-9-CM Diagnosis and Procedure Codes / CPT Code Descriptions

**ICD-9-CM Diagnosis** (diagnosis must be an inpatient primary discharge diagnosis):

- 277.4 Disorders of bilirubin excretion
- 571.5 Cirrhosis of liver without mention of alcohol
- 572.8 Other sequelae of chronic liver disease\*
- 573.0 Chronic passive congestion of liver
- 573.3 Hepatitis, unspecified
- 573.8 Other specified disorders of liver
- 573.9 Unspecified disorder of liver
- 782.4 Jaundice, unspecified
- 794.8 Nonspecific abnormal results of liver function test

**ICD-9-CM Procedures** (may occur in any code position; inpatient setting):

- 50.11 Closed (percutaneous) [needle] biopsy of liver
- 50.12 Open biopsy of liver
- 50.13 Transjugular liver biopsy
- 50.14 Laparoscopic liver biopsy
- 50.91 Percutaneous aspiration of liver

**CPT**<sup>®</sup> (may occur in any code position; inpatient setting):

- 47000 Biopsy of liver, needle; percutaneous
- 47001 Biopsy of liver, needle; done at time of other major procedure
- 47100 Biopsy of liver, wedge
- 78205 Liver imaging (SPECT)
- 78206 Liver imaging (SPECT); with vascular flow

---

\* Approved for definition inclusion on October 22, 2013.

## APPENDIX B.5 ALGORITHM FOR SELECTION OF SLD OUTCOME EVENTS FOR ADJUDICATION

### A CODES

**ICD-9-CM Diagnosis (may occur in any code position; inpatient setting)**

570 Acute and subacute necrosis of liver  
572.2 Hepatic coma  
572.4 Hepatorenal syndrome  
V42.7 Liver replaced by transplant

**ICD-9-CM Procedures (may occur in any code position; inpatient setting)**

50.5 Liver transplant  
50.51 Auxiliary liver transplant  
50.59 Other transplant of liver

**CPT (may occur in any code position; inpatient setting)**

47135 Liver allotransplantation; orthotopic, partial or whole  
47136 Liver allotransplantation; heterotopic, partial or whole

### B CODES

**ICD-9-CM Diagnosis (must be a primary discharge diagnosis)**

277.4 Disorders of bilirubin excretion  
571.5 Cirrhosis of liver without mention of alcohol  
572.8 Other sequelae of chronic liver disease  
573.0 Chronic passive congestion of liver  
573.3 Hepatitis, unspecified  
573.8 Other specified disorders of liver  
573.9 Unspecified disorder of liver  
782.4 Jaundice, unspecified  
794.8 Nonspecific abnormal results of liver function test

**ICD-9-CM Procedures (may occur in any code position; inpatient setting)**

50.11 Closed (percutaneous) [needle] biopsy of liver  
50.12 Open biopsy of liver  
50.13 Transjugular liver biopsy  
50.14 Laparoscopic liver biopsy  
50.91 Percutaneous aspiration of liver

**CPT (may occur in any code position; inpatient setting)**

47000 Biopsy of liver, needle; percutaneous  
47001 Biopsy of liver, needle; done at time of other major procedure  
47100 Biopsy of liver, wedge  
78205 Liver imaging (SPECT)  
78206 Liver imaging (SPECT); with vascular flow

## **APPENDIX C.1.1 INTERSTITIAL LUNG DISEASE OUTCOME EVENT - NARROW DEFINITION; BASELINE EXCLUSIONARY SCREENING**

### **ICD-9-CM Code Descriptions**

#### **History of Interstitial Lung Disease**

|        |                                                                  |
|--------|------------------------------------------------------------------|
| 515    | Post-inflammatory pulmonary fibrosis                             |
| 516.3  | Idiopathic fibrosing alveolitis                                  |
| 516.30 | Idiopathic interstitial pneumonia, not otherwise specified (IIP) |
| 516.31 | Idiopathic pulmonary fibrosis (IPF)                              |
| 516.32 | Idiopathic non-specific interstitial pneumonitis (NSIP)          |
| 516.33 | Acute interstitial pneumonitis (AIP)                             |
| 516.34 | Respiratory bronchiolitis interstitial lung disease (RB-ILD)     |
| 516.35 | Idiopathic lymphoid interstitial pneumonia (LIP)                 |
| 516.36 | Cryptogenic organizing pneumonia (COP)                           |
| 516.37 | Desquamative interstitial pneumonia (DIP)                        |
| 516.8  | Other specified alveolar and parietoalveolar pneumonopathies     |
| 516.9  | Unspecified alveolar and parietoalveolar pneumonopathy           |

---

#### **History of Pneumonia**

|        |                                                                |
|--------|----------------------------------------------------------------|
| 480    | Viral Pneumonia                                                |
| 480.0  | Pneumonia Due To Adenovirus                                    |
| 480.1  | Pneumonia Due To Respiratory Syncytial Virus                   |
| 480.2  | Pneumonia Due To Parainfluenza Virus                           |
| 480.3  | Pneumonia Due To Sars-Associated Coronavirus                   |
| 480.8  | Pneumonia Due To Other Virus Not Elsewhere Classified          |
| 480.9  | Viral Pneumonia Unspecified                                    |
| 481    | Pneumococcal Pneumonia [Streptococcus Pneumoniae Pneumonia]    |
| 482    | Other Bacterial Pneumonia                                      |
| 482.0  | Pneumonia Due To Klebsiella Pneumoniae                         |
| 482.1  | Pneumonia Due To Pseudomonas                                   |
| 482.2  | Pneumonia Due To Hemophilus Influenzae (H. Influenzae)         |
| 482.3  | Pneumonia Due To Streptococcus                                 |
| 482.30 | Pneumonia Due To Streptococcus Unspecified                     |
| 482.31 | Pneumonia Due To Streptococcus Group A                         |
| 482.32 | Pneumonia Due To Streptococcus Group B                         |
| 482.39 | Pneumonia Due To Other Streptococcus                           |
| 482.4  | Pneumonia Due To Staphylococcus                                |
| 482.40 | Pneumonia Due To Staphylococcus Unspecified                    |
| 482.41 | Methicillin Susceptible Pneumonia Due To Staphylococcus Aureus |
| 482.42 | Methicillin Resistant Pneumonia Due To Staphylococcus Aureus   |
| 482.49 | Other Staphylococcus Pneumonia                                 |
| 482.8  | Pneumonia Due To Other Specified Bacteria                      |
| 482.81 | Pneumonia Due To Anaerobes                                     |
| 482.82 | Pneumonia Due To Escherichia Coli [E.Coli]                     |
| 482.83 | Pneumonia Due To Other Gram-Negative Bacteria                  |
| 482.84 | Pneumonia Due To Legionnaires' Disease                         |
| 482.89 | Pneumonia Due To Other Specified Bacteria                      |
| 482.9  | Bacterial Pneumonia Unspecified                                |

483.8 Pneumonia Due To Other Specified Organism  
485 Bronchopneumonia Organism Unspecified  
486 Pneumonia Organism Unspecified  
487.0 Influenza With Pneumonia  
507.0 Pneumonitis due to inhalation of food or vomitus

## APPENDIX C.1.2    ILD OUTCOME EVENT - NARROW DEFINITION

### **ICD-9-CM Code Descriptions** (Codes must be an inpatient discharge diagnosis)

|        |                                                                  |
|--------|------------------------------------------------------------------|
| 515    | Post-inflammatory pulmonary fibrosis                             |
| 516.3  | Idiopathic fibrosing alveolitis                                  |
| 516.30 | Idiopathic interstitial pneumonia, not otherwise specified (IIP) |
| 516.31 | Idiopathic pulmonary fibrosis (IPF)                              |
| 516.32 | Idiopathic non-specific interstitial pneumonitis (NSIP)          |
| 516.33 | Acute interstitial pneumonitis (AIP)                             |
| 516.34 | Respiratory bronchiolitis interstitial lung disease (RB-ILD)     |
| 516.35 | Idiopathic lymphoid interstitial pneumonia (LIP)                 |
| 516.36 | Cryptogenic organizing pneumonia (COP)                           |
| 516.37 | Desquamative interstitial pneumonia (DIP)                        |
| 516.8  | Other specified alveolar and parietoalveolar pneumonopathies     |
| 516.9  | Unspecified alveolar and parietoalveolar pneumonopathy           |

---

### APPENDIX C.1.3 ALGORITHM FOR SELECTION OF SUSPECTED ILD (NARROW) OUTCOME EVENTS FOR ADJUDICATION

Code occurrence must be among the hospital discharge diagnoses.

#### ICD-9-CM

| Code   | Description                                                      |
|--------|------------------------------------------------------------------|
| 515    | Post-inflammatory pulmonary fibrosis                             |
| 516.3  | Idiopathic fibrosing alveolitis                                  |
| 516.30 | Idiopathic interstitial pneumonia, not otherwise specified (IIP) |
| 516.31 | Idiopathic pulmonary fibrosis (IPF)                              |
| 516.32 | Idiopathic non-specific interstitial pneumonitis (NSIP)          |
| 516.33 | Acute interstitial pneumonitis (AIP)                             |
| 516.34 | Respiratory bronchiolitis interstitial lung disease (RB-ILD)     |
| 516.35 | Idiopathic lymphoid interstitial pneumonia (LIP)                 |
| 516.36 | Cryptogenic organizing pneumonia (COP)                           |
| 516.37 | Desquamative interstitial pneumonia (DIP)                        |
| 516.8  | Other specified alveolar and parietoalveolar pneumonopathies     |
| 516.9  | Unspecified alveolar and parietoalveolar pneumonopathy           |

## **APPENDIX C.2.1 INTERSTITIAL LUNG DISEASE OUTCOME EVENT – BROAD DEFINITION; BASELINE EXCLUSIONARY SCREENING**

### **ICD-9-CM Code Descriptions**

#### **History of Interstitial Lung Disease (Broad)**

|        |                                                                                     |
|--------|-------------------------------------------------------------------------------------|
| 495.9  | Unspecified allergic alveolitis and pneumonitis                                     |
| 515    | Post-inflammatory pulmonary fibrosis                                                |
| 516.3  | Idiopathic fibrosing alveolitis                                                     |
| 516.30 | Idiopathic interstitial pneumonia, not otherwise specified (IIP)                    |
| 516.31 | Idiopathic pulmonary fibrosis (IPF)                                                 |
| 516.32 | Idiopathic non-specific interstitial pneumonitis (NSIP)                             |
| 516.33 | Acute interstitial pneumonitis (AIP)                                                |
| 516.34 | Respiratory bronchiolitis interstitial lung disease (RB-ILD)                        |
| 516.35 | Idiopathic lymphoid interstitial pneumonia (LIP)                                    |
| 516.36 | Cryptogenic organizing pneumonia (COP)                                              |
| 516.37 | Desquamative interstitial pneumonia (DIP)                                           |
| 516.8  | Other specified alveolar and parietoalveolar pneumonopathies                        |
| 516.9  | Unspecified alveolar and parietoalveolar pneumonopathy                              |
| 518    | Other diseases of lung                                                              |
| 518.0  | Pulmonary collapse                                                                  |
| 518.1  | Interstitial emphysema                                                              |
| 518.2  | Compensatory emphysema                                                              |
| 518.3  | Pulmonary eosinophilia                                                              |
| 518.4  | Acute edema of lung unspecified                                                     |
| 518.5  | Pulmonary insufficiency following trauma and surgery                                |
| 518.51 | Acute respiratory failure following trauma and surgery                              |
| 518.52 | Other pulmonary insufficiency not elsewhere classified following trauma and surgery |
| 518.53 | Acute and chronic respiratory failure following trauma and surgery                  |
| 518.6  | Allergic bronchopulmonary aspergilliosis                                            |
| 518.7  | Transfusion related acute lung injury (trali)                                       |
| 518.8  | Other diseases of lung                                                              |
| 518.81 | Acute respiratory failure                                                           |
| 518.82 | Other pulmonary insufficiency not elsewhere classified                              |
| 518.83 | Chronic respiratory failure                                                         |
| 518.84 | Acute and chronic respiratory failure                                               |

Code occurrence must be among the hospital discharge diagnoses.

### ICD-9-CM

| Code   | Description                                                      |
|--------|------------------------------------------------------------------|
| 495.9  | Unspecified allergic alveolitis and pneumonitis                  |
| 515    | Post-inflammatory pulmonary fibrosis                             |
| 516.3  | Idiopathic fibrosing alveolitis                                  |
| 516.30 | Idiopathic interstitial pneumonia, not otherwise specified (IIP) |
| 516.31 | Idiopathic pulmonary fibrosis (IPF)                              |
| 516.32 | Idiopathic non-specific interstitial pneumonitis (NSIP)          |
| 516.33 | Acute interstitial pneumonitis (AIP)                             |
| 516.34 | Respiratory bronchiolitis interstitial lung disease (RB-ILD)     |
| 516.35 | Idiopathic lymphoid interstitial pneumonia (LIP)                 |
| 516.36 | Cryptogenic organizing pneumonia (COP)                           |
| 516.37 | Desquamative interstitial pneumonia (DIP)                        |
| 516.8  | Other specified alveolar and parietoalveolar pneumonopathies     |
| 516.9  | Unspecified alveolar and parietoalveolar pneumonopathy           |
| 518.82 | Acute Respiratory Distress Syndrome                              |

## APPENDIX D. LIVER INJURY/DISEASE - RISK FACTORS / CONFOUNDER DEFINITIONS

Codes to identify patients with pre-existing liver/biliary diseases, and chronic liver disease.

| ICD-9-CM                                   | Diagnosis Code Description                                                                     |
|--------------------------------------------|------------------------------------------------------------------------------------------------|
| <b>History of Alcoholism</b>               |                                                                                                |
| 571.0                                      | Alcoholic Fatty Liver                                                                          |
| 571.1                                      | Acute Alcoholic Hepatitis                                                                      |
| 571.2                                      | Alcoholic Cirrhosis Of Liver                                                                   |
| 571.3                                      | Unspecified Alcoholic Liver Damage                                                             |
| <b>History of Biliary Duct Disorders</b>   |                                                                                                |
| 574.00                                     | Calculus Of Gallbladder With Acute Cholecystitis Without Obstruction                           |
| 574.01                                     | Calculus Of Gallbladder With Acute Cholecystitis With Obstruction                              |
| 574.10                                     | Calculus Of Gallbladder With Other Cholecystitis Without Obstruction                           |
| 574.11                                     | Calculus Of Gallbladder With Other Cholecystitis With Obstruction                              |
| 574.20                                     | Calculus Of Gallbladder Without Cholecystitis Without Obstruction                              |
| 574.21                                     | Calculus Of Gallbladder Without Cholecystitis With Obstruction                                 |
| 574.30                                     | Calculus Of Bile Duct With Acute Cholecystitis Without Obstruction                             |
| 574.31                                     | Calculus Of Bile Duct With Acute Cholecystitis With Obstruction                                |
| 574.40                                     | Calculus Of Bile Duct With Other Cholecystitis                                                 |
| 574.41                                     | Calculus Of Bile Duct With Other Cholecystitis Without Obstruction                             |
| 574.50                                     | Calculus Of Bile Duct With Other Cholecystitis With Obstruction                                |
| 574.51                                     | Calculus Of Bile Duct Without Mention Of Cholecystitis                                         |
| 574.60                                     | Calculus Of Bile Duct Without Cholecystitis Without Obstruction                                |
| 574.61                                     | Calculus Of Bile Duct Without Cholecystitis With Obstruction                                   |
| 574.70                                     | Calculus Of Gallbladder And Bile Duct With Acute Cholecystitis                                 |
| 574.71                                     | Calculus Of Gallbladder And Bile Duct With Other Cholecystitis, With Obstruction               |
| 574.80                                     | Calculus Of Gallbladder And Bile Duct With Acute And Chronic Cholecystitis Without Obstruction |
| 574.81                                     | Calculus Of Gallbladder And Bile Duct With Acute And Chronic Cholecystitis With Obstruction    |
| 574.90                                     | Calculus Of Gallbladder And Bile Duct Without Cholecystitis Without Obstruction                |
| 574.91                                     | Calculus Of Gallbladder And Bile Duct Without Cholecystitis With Obstruction                   |
| 575.0                                      | Acute Cholecystitis                                                                            |
| 575.1                                      | Other Cholecystitis                                                                            |
| 575.10                                     | Cholecystitis Unspecified                                                                      |
| 575.11                                     | Chronic Cholecystitis                                                                          |
| 575.12                                     | Acute And Chronic Cholecystitis                                                                |
| 575.2                                      | Obstruction Of Gallbladder                                                                     |
| 575.3                                      | Hydrops Of Gallbladder                                                                         |
| 575.4                                      | Perforation Of Gallbladder                                                                     |
| 575.5                                      | Fistula Of Gallbladder                                                                         |
| 575.6                                      | Cholesterolosis Of Gallbladder                                                                 |
| 575.8                                      | Other Specified Disorders Of Gallbladder                                                       |
| 575.9                                      | Unspecified Disorder Of Gallbladder                                                            |
| 576.1                                      | Cholangitis                                                                                    |
| <b>History of Congestive Heart Failure</b> |                                                                                                |

**Medication Proxy** (Occurrence of medication prior to index date) [from Facts & Comparisons eAnswers – Antidiabetic Agents, accessed April 6, 2015.]

acarbose  
albiglutide  
alogliptin  
bromocriptine  
canagliflozin  
chlorpropamide  
dapagliflozin  
dulaglutide  
empagliflozin  
exenatide  
glimepiride  
glipizide  
glyburide ( glibenclamide)  
insulin aspart  
insulin detemir  
insulin glargine (rdna origin)  
insulin glulisine  
insulin isophane ( nph)  
insulin isophane (nph) /insulin regular  
insulin lispro  
insulin regular  
linagliptin  
liraglutide  
metformin hydrochloride  
miglitol  
nateglinide  
pioglitazone  
pramlintide  
repaglinide  
rosiglitazone  
saxagliptin  
sitagliptin  
tolazamide  
tolbutamide  
alogliptin/metformin hydrochloride  
alogliptin/pioglitazone  
canagliflozin/metformin hydrochloride  
dapagliflozin/metformin  
empagliflozin/linagliptin  
glipizide/metformin hydrochloride  
glyburide/metformin hydrochloride  
linagliptin/metformin hydrochloride  
pioglitazone/glimepiride  
pioglitazone/metformin hydrochloride  
repaglinide/metformin hydrochloride

rosiglitazone/glimepiride  
rosiglitazone/metformin hydrochloride  
saxagliptin/metformin hydrochloride  
sitagliptin/metformin hydrochloride  
sitagliptin/simvastatin

#### History of Obesity

## APPENDIX E. INTERSTITIAL LUNG DISEASE - RISK FACTORS / CONFOUNDER DEFINITIONS

Risk factors and confounders for ILD are defined by the following ICD-9-CM diagnosis/procedure codes, CPT, HCPCS codes, and/or medication name or NDCs.

### ICD-9-CM Code Descriptions

#### Asthma

|        |                                                      |
|--------|------------------------------------------------------|
| 493    | Asthma                                               |
| 493.0  | Extrinsic Asthma                                     |
| 493.00 | Extrinsic Asthma Unspecified                         |
| 493.01 | Extrinsic Asthma With Status Asthmaticus             |
| 493.02 | Extrinsic Asthma With (Acute) Exacerbation           |
| 493.1  | Intrinsic Asthma                                     |
| 493.10 | Intrinsic Asthma Unspecified                         |
| 493.11 | Intrinsic Asthma With Status Asthmaticus             |
| 493.12 | Intrinsic Asthma With (Acute) Exacerbation           |
| 493.2  | Chronic Obstructive Asthma                           |
| 493.20 | Chronic Obstructive Asthma Unspecified               |
| 493.21 | Chronic Obstructive Asthma With Status Asthmaticus   |
| 493.22 | Chronic Obstructive Asthma With (Acute) Exacerbation |
| 493.8  | Other Specified Asthma                               |
| 493.81 | Exercise-Induced Bronchospasm                        |
| 493.82 | Cough Variant Asthma                                 |
| 493.9  | Asthma Unspecified                                   |
| 493.90 | Asthma Unspecified                                   |
| 493.91 | Asthma Unspecified Type With Status Asthmaticus      |
| 493.92 | Asthma Unspecified With (Acute) Exacerbation         |

#### Bronchitis

|        |                                                          |
|--------|----------------------------------------------------------|
| 490    | Bronchitis Not Specified As Acute Or Chronic             |
| 491    | Chronic Bronchitis                                       |
| 491.0  | Simple Chronic Bronchitis                                |
| 491.1  | Mucopurulent Chronic Bronchitis                          |
| 491.2  | Obstructive Chronic Bronchitis                           |
| 491.20 | Obstructive Chronic Bronchitis Without Exacerbation      |
| 491.21 | Obstructive Chronic Bronchitis With (Acute) Exacerbation |
| 491.22 | Obstructive Chronic Bronchitis With Acute Bronchitis     |
| 491.8  | Other Chronic Bronchitis                                 |
| 491.9  | Unspecified Chronic Bronchitis                           |
| 494    | Bronchiectasis                                           |
| 494.0  | Bronchiectasis Without Acute Exacerbation                |
| 494.1  | Bronchiectasis With Acute Exacerbation                   |

#### COPD

|     |                                                     |
|-----|-----------------------------------------------------|
| 496 | Chronic Airway Obstruction Not Elsewhere Classified |
|-----|-----------------------------------------------------|

### Connective Tissue Disease

|        |                                            |
|--------|--------------------------------------------|
| 136.1  | Behçet syndrome (very rare)                |
| 446.21 | Goodpasture syndrome                       |
| 710.0  | Systemic lupus erythematosus               |
| 710.1  | Systemic sclerosis                         |
| 710.2  | Sjögren syndrome                           |
| 710.3  | Dermatomyositis                            |
| 710.4  | Polymyositis                               |
| 710.8  | Mixed connective tissue disease            |
| 710.9  | Undifferentiated connective tissue disease |
| 714.xx | Rheumatoid arthritis                       |
| 720.0  | Ankylosing spondylitis (rare)              |

### Exposure to Occupational and Environmental Pulmonary Diseases

|       |                                                                     |
|-------|---------------------------------------------------------------------|
| 495   | Extrinsic Allergic Alveolitis                                       |
| 495.0 | Farmers' Lung                                                       |
| 495.1 | Bagassosis                                                          |
| 495.2 | Bird-Fanciers' Lung                                                 |
| 495.3 | Suberosis                                                           |
| 495.4 | Malt Workers' Lung                                                  |
| 495.5 | Mushroom Workers' Lung                                              |
| 495.6 | Maple Bark-Strippers' Lung                                          |
| 495.7 | Ventilation Pneumonitis                                             |
| 495.8 | Other Specified Allergic Alveolitis And Pneumonitis                 |
| 495.9 | Unspecified Allergic Alveolitis And Pneumonitis                     |
| 500   | Coal Workers' Pneumoconiosis                                        |
| 501   | Asbestosis                                                          |
| 502   | Pneumoconiosis Due To Other Silica Or Silicates                     |
| 503   | Pneumoconiosis Due To Other Inorganic Dust                          |
| 504   | Pneumonopathy Due To Inhalation Of Other Dust                       |
| 505   | Pneumoconiosis Unspecified                                          |
| 506   | Respiratory Conditions Due To Chemical Fumes And Vapors             |
| 506.0 | Bronchitis And Pneumonitis Due To Fumes And Vapors                  |
| 506.1 | Acute Pulmonary Edema Due To Fumes And Vapors                       |
| 506.2 | Upper Respiratory Inflammation Due To Fumes And Vapors              |
| 506.3 | Other Acute And Subacute Resp Conditions Due To Fumes And Vapors    |
| 506.4 | Chronic Respiratory Conditions Due To Fumes And Vapors              |
| 506.9 | Unspecified Respiratory Conditions Due To Fumes And Vapors          |
| 507   | Pneumonitis Due To Solids And Liquids                               |
| 507.1 | Pneumonitis Due To Inhalation Of Oils And Essences                  |
| 507.8 | Pneumonitis Due To Other Solids And Liquids                         |
| 508   | Respiratory Conditions Due To Other And Unspecified External Agents |
| 508.0 | Acute Pulmonary Manifestations Due To Radiation                     |
| 508.1 | Chronic And Other Pulmonary Manifestations Due To Radiation         |
| 508.2 | Respiratory Conditions Due To Smoke Inhalation                      |
| 508.8 | Respiratory Conditions Due To Other Specified External Agents       |
| 508.9 | Respiratory Conditions Due To Unspecified External Agent            |

### Gastroesophageal Reflux Disease

|        |                                 |
|--------|---------------------------------|
| 530.81 | Gastroesophageal reflux disease |
|--------|---------------------------------|

**Other Anti-arrhythmic Agents (Therapeutic class # 240404\*)**

|                                             |                             |
|---------------------------------------------|-----------------------------|
| Bretylium Tosylate (Discontinued June 2011) | Procainamide Hydrochloride  |
| Bretylium Tosylate/Dextrose                 | Quinidine Gluconate         |
| Dextrose/Lidocaine Hydrochloride            | Quinidine Polygalacturonate |
| Disopyramide Phosphate                      | Quinidine Sulfate           |
| Lidocaine Hydrochloride                     | Tocainide Hydrochloride     |
| Mexiletine Hydrochloride                    |                             |

**Oxygen Therapy – CPT Procedure Codes**

| CPT   | CPT Description                                                                                                                                                                                                                                                                                 |
|-------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 4030F | Long-term oxygen therapy prescribed (more than 15 hours per day) (COPD)                                                                                                                                                                                                                         |
| 82803 | Gases, blood, any combination of pH, pCO <sub>2</sub> , pO <sub>2</sub> , CO <sub>2</sub> , HCO <sub>3</sub>                                                                                                                                                                                    |
| 82805 | Gases, blood, any combination of pH, pCO <sub>2</sub> , pO <sub>2</sub> , CO <sub>2</sub> , HCO <sub>3</sub> (including calculated O <sub>2</sub> saturation); with O <sub>2</sub> saturation, by direct measurement, except pulse oximetry                                                     |
| 82810 | Gases, blood, O <sub>2</sub> saturation only, by direct measurement, except pulse oximetry                                                                                                                                                                                                      |
| 94010 | Spirometry, including graphic record, total and timed vital capacity, expiratory flow rate measurement(s), with or without maximal voluntary ventilation                                                                                                                                        |
| 94014 | Patient-initiated spirometric recording per 30-day period of time; includes reinforced education, transmission of spirometric tracing, data capture, analysis of transmitted data, periodic recalibration and review and interpretation by a physician/other qualified health care professional |
| 94015 | Patient-initiated spirometric recording per 30-day period of time; recording                                                                                                                                                                                                                    |
| 94016 | Patient-initiated spirometric recording per 30-day period of time; review and interpretation only by a physician or other qualified health care professional                                                                                                                                    |
| 94060 | Bronchodilation responsiveness, spirometry as in 94010, pre- and post-bronchodilator admin                                                                                                                                                                                                      |
| 94070 | Bronchospasm provocation evaluation, multiple spirometric determinations as in 94010, with administered agents (eg, antigen[s], cold air, methacholine)                                                                                                                                         |
| 94150 | Vital capacity, total (separate procedure)                                                                                                                                                                                                                                                      |
| 94200 | Maximum breathing capacity, maximal voluntary ventilation                                                                                                                                                                                                                                       |
| 94250 | Expired gas collection, quantitative, single procedure (separate procedure)                                                                                                                                                                                                                     |
| 94375 | Respiratory flow volume loop                                                                                                                                                                                                                                                                    |
| 94400 | Breathing response to CO <sub>2</sub> (CO <sub>2</sub> response curve)                                                                                                                                                                                                                          |
| 94450 | Breathing response to hypoxia (hypoxia response curve)                                                                                                                                                                                                                                          |
| 94452 | High altitude simulation test (HAST), with interpretation and report by a physician or other qualified health care professional;                                                                                                                                                                |
| 94453 | High altitude simulation test (HAST), with interpretation and report by a physician or other qualified health care professional; with supplemental oxygen titration                                                                                                                             |
| 94610 | Intrapulmonary surfactant administration by a physician or other qualified health care professional through endotracheal tube                                                                                                                                                                   |
| 94620 | Pulmonary stress testing; simple                                                                                                                                                                                                                                                                |
| 94621 | Pulmonary stress testing; complex                                                                                                                                                                                                                                                               |
| 94640 | Pressurized or nonpressurized inhalation treatment for acute airway obstruction or for sputum induction for diagnostic purposes                                                                                                                                                                 |
| 94642 | Aerosol inhalation of pentamidine for pneumocystis carinii pneumonia treatment/prophylaxis                                                                                                                                                                                                      |

|       |                                                                                                                                          |
|-------|------------------------------------------------------------------------------------------------------------------------------------------|
| 94644 | Continuous inhalation treatment w aerosol medication for acute airway obstruction; 1 <sup>st</sup> hour                                  |
| 94645 | Continuous inhalation treatment w/ aerosol medication for acute airway obstruction; ea add hr                                            |
| 94660 | Continuous positive airway pressure ventilation (CPAP), initiation and management                                                        |
| 94662 | Continuous negative pressure ventilation (CNP), initiation and management                                                                |
| 94664 | Demonstration and/or evaluation of patient utilization of an aerosol generator, nebulizer, metered dose inhaler or IPPB device           |
| 94667 | Manipulation chest wall, such as cupping, percussing, and vibration to facilitate lung function; initial demonstration and/or evaluation |
| 94668 | Manipulation chest wall, such as cupping, percussing, and vibration to facilitate lung function; subsequent                              |
| 94680 | Oxygen uptake, expired gas analysis; rest and exercise, direct, simple                                                                   |
| 94681 | Oxygen uptake, expired gas analysis; including CO2 output, percentage oxygen extracted                                                   |
| 94690 | Oxygen uptake, expired gas analysis; rest, indirect (separate procedure)                                                                 |
| 94726 | Plethysmography for determination of lung volumes and, when performed, airway resistance                                                 |
| 94727 | Gas dilution or washout for determination of lung volumes and, when performed, distribution of ventilation and closing volumes           |
| 94728 | Airway resistance by impulse oscillometry                                                                                                |
| 94729 | Diffusing capacity (eg, carbon monoxide, membrane)                                                                                       |
| 94750 | Pulmonary compliance study (eg, plethysmography, volume and pressure measurements)                                                       |
| 94760 | Noninvasive ear or pulse oximetry for oxygen saturation; single determination                                                            |
| 94761 | Noninvasive ear or pulse oximetry for oxygen saturation; multiple determinations                                                         |
| 94762 | Noninvasive ear or pulse oximetry for oxygen saturation; by continuous overnight monitoring                                              |
| 94770 | Carbon dioxide, expired gas determination by infrared analyzer                                                                           |
| 99503 | Home visit - respiratory therapy care (eg, oxygen therapy, respiratory assessment, apnea eval)                                           |
| 99504 | Home visit for mechanical ventilation care                                                                                               |

#### Oxygen Therapy – HCPCS Procedure Codes

| HCPCS | HCPCS Description                                                                                                                                                                                                                                    |
|-------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| E0424 | Stationary compressed gaseous oxygen system, rental; includes container, contents, regulator, flowmeter, humidifier, nebulizer, cannula or mask, and tubing                                                                                          |
| E0425 | Stationary compressed gas system, purchase; includes regulator, flowmeter, humidifier, nebulizer, cannula or mask, and tubing                                                                                                                        |
| E0430 | Portable gaseous oxygen system, purchase; includes regulator, flowmeter, humidifier, cannula or mask, and tubing                                                                                                                                     |
| E0431 | Portable gaseous oxygen system, rental; includes portable container, regulator, flowmeter, humidifier, cannula or mask, and tubing                                                                                                                   |
| E0433 | Portable liquid oxygen system, rental; home liquefier used to fill portable liquid oxygen containers, includes portable containers, regulator, flowmeter, humidifier, cannula or mask and tubing, with or without supply reservoir and content gauge |
| E0434 | Portable liquid oxygen system, rental; includes portable container, supply reservoir, humidifier, flowmeter, refill adaptor, contents gauge, cannula or mask, and tubing                                                                             |
| E0435 | Portable liquid oxygen system purchase; includes portable container, supply reservoir, flowmeter, humidifier, contents gauge, cannula or mask, tubing and refill adaptor                                                                             |
| E0439 | Stationary liquid oxygen system, rental; includes container, contents, regulator, flowmeter, humidifier, nebulizer, cannula or mask, and tubing                                                                                                      |
| E0440 | Stationary liquid oxygen system, purchase; includes use of reservoir, contents indicator,                                                                                                                                                            |

|       |                                                                                                                                                                                             |
|-------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|       | regulator, flowmeter, humidifier, nebulizer, cannula or mask, and tubing                                                                                                                    |
| E0441 | Oxygen contents, gaseous (for use with owned gaseous stationary systems or when both a stationary and portable gaseous system are owned), 1 month's supply = 1 unit                         |
| E0442 | Oxygen contents, liquid (for use with owned liquid stationary systems or when both a stationary and portable liquid system are owned), 1 month's supply = 1 unit                            |
| E0443 | Portable oxygen contents, gaseous (for use only with portable gaseous systems when no stationary gas or liquid system is used), 1 month's supply = 1 unit                                   |
| E0444 | Portable oxygen contents, liquid (for use only with portable liquid systems when no stationary gas or liquid system is used), 1 month's supply = 1 unit                                     |
| E1390 | Oxygen concentrator, single delivery port, capable of delivering 85 percent or greater oxygen concentration at the prescribed flow rate                                                     |
| E1391 | Oxygen concentrator, dual delivery port, capable of delivering 85 percent or greater oxygen concentration at the prescribed flow rate, each                                                 |
| E1392 | Portable oxygen concentrator, rental                                                                                                                                                        |
| E1405 | Oxygen and water vapor enriching system with heated delivery                                                                                                                                |
| E1406 | Oxygen and water vapor enriching system without heated delivery                                                                                                                             |
| K0738 | Portable gaseous oxygen system, rental; home compressor used to fill portable oxygen cylinders; includes portable containers, regulator, flowmeter, humidifier, cannula or mask, and tubing |
| K0741 | Portable gaseous oxygen system, rental, includes portable container, regulator, flowmeter, humidifier, cannula or mask, and tubing, for cluster headaches                                   |
| S8120 | Oxygen contents, gaseous, 1 unit equals 1 cubic foot                                                                                                                                        |
| S8121 | Oxygen contents, liquid, 1 unit equals 1 pound                                                                                                                                              |

**Agents Associated with Drug-Induced Pulmonary Disease\* [Note: current list refers to DoD data; a combined DoD & HIRD list of medications will be provided.]**

| Generic Name (Alias)                         |                                                                                             |
|----------------------------------------------|---------------------------------------------------------------------------------------------|
| Study Period: 7/20/2008 to 9/30/2014         |                                                                                             |
| Product Name                                 |                                                                                             |
| Low Risk Categories                          |                                                                                             |

## **APPENDIX F. PROPENSITY SCORE MODEL DEVELOPMENT: SELECTION OF VARIABLES**

Baseline occurrence or use (i.e., one year prior to and including the Index Date).

### **Serious Liver Injury/Disease Variables:**

- Gender;
- Age;
- Year of index date (Days from start of study to patient index date: <180, 180-<360, 360-<540, 540+);
- History of Alcoholism;
- History of Bile duct disorders;
- History of Congestive heart failure;
- History of Diabetes [Diagnosis or anti-diabetic therapy];
- History of Obesity;
- Prior use of other study medication;
- Prior use of other anti-arrhythmics (other than the study medications);
- Prior use of hepatotoxic medications;
- Number of hospitalizations in acute care facilities during baseline period;
- Number of office visits during baseline period;
- Number of ER visits during baseline period;
- Number of medications (therapeutic class level) during baseline period;
- Gastroenterology / Hepatology specialty visits.

**Interstitial Lung Disease Variables:**

- Gender;
- Age;
- Year of index date (Days from start of study to patient index date: <180, 180-<360, 360-<540, 540+);
- History of Asthma;
- History of Bronchitis, exclude acute bronchitis;
- History of Chronic obstructive pulmonary disease;
- History of Connective Tissue Disease;
- History of Exposure to occupational and environmental toxins;
- History of Gastroesophageal reflux disease;
- Prior use of other study medication;
- Prior use of other anti-arrhythmics (other than the study medications);
- Prior use of agents associated with drug induced pulmonary disease:
  - Antimicrobial medications
  - Selected Cardiovascular Agents
  - Anti-Inflammatory Medications
  - Biologic Medications
  - Chemotherapy agents
  - Miscellaneous
- Prior use of Therapeutic oxygen treatment;
- Number of hospitalizations in acute care facilities during baseline period;
- Number of office visits during baseline period;
- Number of ER visits during baseline period;
- Number of medications (therapeutic class level) during baseline period;
- Pulmonology specialty visits.

Note: Self-reported information on exposure to smoking has been found to be unreliable. Therefore History of smoking will not be used as a PSM variable. However, a sensitivity analysis will be conducted, if sufficient smoking data is available to do so.

- History of Smoking; (Look at "Smoking Status" [Demographic variable], separately.)
  - Medication Proxy
    - bupropion (Zyban)
    - varenicline (Chantix)

## **APPENDIX 15. STATISTICAL ANALYSIS PLAN – DOD**

***Statistical Analysis Plan***

**Epidemiology Study**

**Serious Liver Injury and Interstitial Lung Disease Occurrences in  
Patients Diagnosed with Atrial Fibrillation Treated with Selected  
Anti-Arrhythmics**

**Study code: DRONE\_C\_05917**

## 1 Introduction and Background

Post-marketing pharmacovigilance data of spontaneous reports associated with dronedarone indicated safety signals related to serious liver injury/disease (SLD) and interstitial lung disease (ILD). In order to examine these associations in a real-world setting, where dronedarone is approved for non-permanent atrial fibrillation (AF), Sanofi requested a retrospective cohort study examining the association between exposure to dronedarone versus selected anti-arrhythmic comparator drugs and these two outcome events among adults.

This is the statistical analysis plan for an observational retrospective cohort study designed to fulfill the request.

## 2 Study Design and Objectives

### 2.1 Primary Objectives

There are two primary objectives for this study:

- Compare rates of SLD in dronedarone-exposed patients versus five separate anti-arrhythmic comparator cohorts all treated for AF.
- Compare rates of ILD in dronedarone-patients versus five separate anti-arrhythmic comparator cohorts all treated for AF.

### 2.2 General Description

An observational retrospective cohort design will be used to estimate the rates of SLD and ILD in each of two data sources. Those data sources are:

- United States Department of Defense (DoD), Military Health System electronic health record system and
- HealthCore Integrated Research Database (HIRD<sup>SM</sup>), which is a healthcare payer claims database.

(See study protocol for descriptions of the two databases.)

The two databases have structural and content differences that preclude the simple pooling of subjects or controlling for the data source. Separate analyses will therefore be conducted for each database, and results of the analyses separately reported. Unless specifically identified as applicable to only one of the outcomes or databases, all criteria and procedures described in this plan apply to the analyses of both study outcomes, in both databases.

## **2.3 Study Period**

The study start date is July 20, 2008. The study end date is September 30, 2014.

## **2.4 Study Population**

Three study populations will be identified for this study: one for the SLD analysis and two for the ILD analysis. All patients will be screened for an overall set of inclusion criteria. One set of event-specific exclusion criteria will be used to create the SLD study population. Two different sets of event-specific exclusion criteria will be applied to create the two ILD study populations. The two sets of exclusion criteria will attempt to address the multiplicity of diagnosis codes variously used to identify ILD.

## **3 Sample Size and Power Calculation**

Calculations were conducted at the outset of this study to determine the number of subjects that would be required to detect hazard ratios of 2.0, 3.0 and 4.0, for various estimated values of comparator group outcome incidence rates.

In selecting the target sample size per cohort for the study, the researchers determined that 1 event per 1,000 Person Years was a reasonably conservative estimate of the comparator incidence rate. They selected a hazard ratio of 3.0 as the effect size of importance for detection. These decisions lead to identification of 3,860 subjects as the required sample size per patient group to conduct a meaningful survival analysis for the study outcomes. (See the study protocol for background data to support the sample size and power calculations.)

## **4 Assignment of Patients to Drug Exposure Cohorts**

Exposure to any of the six anti-arrhythmic drugs listed below will be used to define the cohorts for each outcome study population:

- dronedarone;
- amiodarone;
- sotalol;
- flecainide;
- dofetilide or
- propafenone.

The first of the above-listed drugs encountered in a patient's dispensing claims history between July 20, 2009 (the dronedarone launch date in the US) and March 31, 2014 will be designated as their

**index drug** and determine their study drug cohort assignment. The date of that first index drug prescription will be the patient's **index date**. (NDC codes used to identify each study drug are found in [Appendix A.1](#) of the study protocol.)

The 365 days prior to and including the index date for each patient will be identified as their **baseline period**. Summary baseline characteristics will be reported for each of the six drug exposure cohorts.

Cohorts with fewer than the required 3,860 patients, after screening (see [sections 4.1](#) through 4.2.2) will be omitted from the propensity score matching and subsequent analyses.

#### **4.1 Screening Criteria Applied to All Patients**

After assignment to study drug cohorts, patients meeting the following criteria will be included in the outcomes study populations:

- No use of the index drug during the baseline period. Use of non-index study drugs during the baseline period is allowed;
- Prescription for only one study drug on the index date;
- Age 18 years or older as of the index date;
- Gender is not missing;
- Continuous eligibility in the health care plan (DoD or HIRD<sup>SM</sup>, as relevant) for the entire baseline period;
- At least one diagnosis of AF in the baseline period (AF identified by ICD-9-CM diagnosis code 427.31) and
- No diagnosis of cancer, organ transplant, HIV, or pregnancy (women only) during the baseline period. See [Appendix A.2](#) for the specific diagnosis codes to use for the screening applied to all patients.

#### **4.2 Additional Screening for Event Study Populations**

Patients meeting all criteria specified in [section 4.1](#) will be further screened for inclusion in one or more of the outcome event study populations.

##### **4.2.1 Additional Screening for SLD Study Population**

The SLD study population will consist of patients who pass the general screening described in [section 4.1](#), and who have no occurrence (inpatient or outpatient) regardless of institution type (e.g., acute care hospital, skilled nursing facility, hospice, etc.) during the baseline period of:

- Serious liver injury/disease event;
- History of viral hepatitis; or

- History of hereditary conditions (e.g., Wilson's disease, hemochromatosis, galactosemia, Alagille syndrome, alpha-1 antitrypsin deficiency, type 1 glycogen storage disease).

See [Appendix B.1](#) for the specific diagnosis codes to use for SLD screening.

#### 4.2.2 Additional Screening for ILD Study Populations

ILD is complex with respect to both development and diagnosis. The disease may manifest quickly or over an extended time period. Further, due to non-specific clinical presentations, a broad range of diagnoses may be assigned to ILD patients. In consideration of these complexities, a primary analysis and three sensitivity analyses (sensitivity analyses 1 – 3) will be defined for the ILD portion of the study. The four analyses will each be conducted in one of two ILD study populations, based on either a narrow or broad definition of ILD used for baseline screening (see descriptions of **ILD study population 1** and **ILD study population 2**, below).

**ILD study population 1** (narrow ILD definition) will consist of patients who pass the general screening described in [section 4.1](#), and who have no occurrence (inpatient or outpatient) regardless of institution type (e.g., acute care hospital, skilled nursing facility, hospice, etc.) during the baseline period of:

- Interstitial lung disease (narrow definition);
- Pneumonia or
- Sarcoidosis.

See [Appendix C.1](#) for the specific diagnosis codes (narrow definition) to use for ILD study population 1 screening.

**ILD study population 2** (broad ILD definition) will consist of patients who pass the general screening described in [section 4.1](#), and who have no occurrence (inpatient or outpatient) regardless of institution type (e.g., acute care hospital, skilled nursing facility, hospice, etc.) during the baseline period of:

- Interstitial lung disease (broad definition);
- Pneumonia or
- Sarcoidosis.

See [Appendix D.1](#) for the specific diagnosis codes (broad definition) to use for ILD study population 2 screening.

The primary analysis and sensitivity analysis 1 will be based on ILD study population 1 (narrow ILD definition). Sensitivity analyses 2 and 3 will be based on ILD study population 2 (broad ILD definition). (See Table 1 for the combinations of study population, event definition and risk window for each analysis.)

All four analyses will be conducted in the DOD data. Initially, only the primary analysis will be conducted in the HealthCore data. In the event that the sensitivity analyses in the DOD dataset yield significant results, then they will be replicated in the HealthCore data.

## **5 Treatment episodes, follow-up, risk periods, event identification/adjudication and event date**

### **5.1 SLD treatment episodes, follow-up, risk period, event identification / adjudication and event date**

#### **5.1.1 Treatment episodes**

A **treatment episode** will be defined as a continuous period starting on the date a study drug is dispensed, and continuing for the duration of the prescription's days' supply. In cases where there is a gap of fewer than 30 days between the date on which a prescription's days' supply ends, and the dispensing date of a subsequent prescription for the same drug, the subsequent prescription will be considered a continuation of the first treatment episode. A treatment episode ends on the date of the end of days' supply for the last prescription in the episode, plus 30 days (added as a risk window to account for potential non-compliance or missed doses). A switch treatment will occur when a different study drug is dispensed prior to the end of another treatment episode (i.e., a treatment episode for the new drug begins). In cases of a switch treatment, the end date of the first episode will be changed to the day preceding the start of the new episode. A treatment episode end date will also be changed to the earliest of date of death, end of health plan eligibility or end of study, should any of those events occur prior to the calculated end of a treatment episode. The **index treatment episode** will be the episode that begins on a patient's index date. Refer to **Figure 2** in the study protocol for a graphical description of these terms. See **SLD-Table 3** for the presentation of the numbers of unique index drug treatment episodes and numbers of non-index study drugs dispensed to patients after their index date, by study drug cohort, in the SLD study population.

#### **5.1.2 Follow-up period**

**Follow-up period** for patients in the SLD analysis begins on the day after the index date and ends at the first occurrence of end of eligibility in the health plan, death, or the end of the study period.

#### **5.1.3 Risk period**

**The SLD Risk Period** begins the day after the Index Date and continues until the earliest occurrence of an SLD event, end of eligibility in the health plan, death or the end of the index treatment episode.

#### **5.1.4 Event identification, adjudication and event date**

##### **5.1.4.1 Event identification and adjudication**

SLD will be defined by inpatient ICD-9-CM diagnosis and procedure codes, or CPT® procedure codes found in records for hospitalizations with admission dates that fall during the SLD risk period. The algorithm and hierarchy of codes is described below. Records associated with the first occurrence of any of the codes, as per the algorithm, will be selected for review by the adjudication

panel. All identified events will be considered ‘suspected,’ pending adjudication by a panel of SLD experts. Only those suspected events that receive a unanimous assessment of ‘Yes’ from the adjudicators will be counted as events for the analysis portion of the study. Adjudication of outcomes identified among patients in the Dronedarone, Sotalol, Flecainide, Dofetilide and Propafenone study drug cohorts will proceed in parallel with creation of the analysis dataset. Cases found in the Amiodarone cohort will only be forwarded for adjudication if the patient is retained in the propensity score matched analysis dataset. Since the Amiodarone cohort is the largest, by far, this two-step process will facilitate timely adjudication of cases while minimizing effort spent reviewing many that might be omitted from the final analysis. (See the study protocol for a detailed description of the actual adjudication process.)

Only hospitalizations in acute care facilities or skilled nursing facility settings will be considered for identification of SLD outcomes. In the DOD database, these hospitalizations will be defined as any that occurred in:

- A direct care facility (i.e., reported in the SIDR data table), or
- A purchased care facility (i.e., reported in the TED-I data table) coded as institution type 10 (General medical or surgical), 76 (Skilled nursing facility) or 91 (Sole community).

Two sets of codes (referenced as **Group A Codes** and **Group B Codes**) will be used to identify suspected SLD events. **Group A** diagnosis codes define an SLD event if they appear as any one of the discharge diagnoses (from the facility record) associated with an inpatient stay. **Group B** diagnosis codes only define an SLD event when they appear as the primary discharge diagnosis (from the facility record) for an inpatient stay. In all cases, the admission date of the inpatient stay with an SLD defining code must fall within the SLD risk period.

The following codes (also included as [Appendix B.2](#)) reflect liver injury/disease and will be referred to as **Group A Codes**:

**ICD-9-CM Diagnosis Codes (code must appear among the hospitalization’s discharge diagnoses, but does not need to be the Primary Discharge Diagnosis)**

570 Acute and subacute necrosis of liver

572.2 Hepatic coma

572.4 Hepatorenal syndrome

V42.7 Liver replaced by transplant

**ICD-9-CM Procedures Codes**

50.5 Liver transplant

50.51 Auxiliary liver transplant

50.59 Other transplant of liver

**CPT® Procedure Codes**

47135 Liver allotransplantation; orthotopic, partial or whole

47136 Liver allotransplantation; heterotopic, partial or whole

CPT Copyright 2013 American Medical Association. All rights reserved. CPT is a registered trademark of the American Medical Association.

The following codes (also included as [Appendix B.3](#)) reflect highly suspicious, suggestive serious liver disease and will be referred to as **Group B Codes**:

**ICD-9-CM Diagnosis Codes (code must appear as a primary discharge diagnosis):**

277.4 Disorders of bilirubin excretion  
571.5 Cirrhosis of liver without mention of alcohol  
572.8 Other sequelae of chronic liver disease  
573.0 Chronic passive congestion of liver  
573.3 Hepatitis, unspecified  
573.8 Other specified disorders of liver  
573.9 Unspecified disorder of liver  
782.4 Jaundice, unspecified  
794.8 Nonspecific abnormal results of liver function test

**ICD-9-CM Procedure Codes**

50.11 Closed (percutaneous) [needle] biopsy of liver  
50.12 Open biopsy of liver  
50.13 Transjugular liver biopsy  
50.14 Laparoscopic liver biopsy  
50.91 Percutaneous aspiration of liver

**CPT® Procedure Codes**

47000 Biopsy of liver, needle; percutaneous  
47001 Biopsy of liver, needle; done at time of other major procedure  
47100 Biopsy of liver, wedge  
78205 Liver imaging (SPECT)  
78206 Liver imaging (SPECT); with vascular flow

---

**5.1.4.2 Event Date**

The admission date of the hospitalization during which an SLD event is identified will be assigned as the event date. Patients will only be counted once as having an SLD event, regardless of subsequent SLD diagnoses or procedures.

**5.2 ILD treatment episodes, follow-up, risk periods, event identification / adjudication and event date**

**5.2.1 Treatment Episodes**

A **treatment episode** will be defined as a continuous period starting on the date a study drug is dispensed, and continuing for the duration of the prescription's days' supply. In cases where there is a gap of fewer than 30 days between the date on which a prescription's days' supply ends, and

the dispensing date of a subsequent prescription for the same drug, the subsequent prescription will be considered a continuation of the first treatment episode. A treatment episode ends on the date of the end of days' supply for the last prescription in the episode, plus 30 days (added as a risk window to account for potential non-compliance or missed doses). A switch treatment will occur when a different study drug is dispensed prior to the end of another treatment episode (i.e., a treatment episode for the new drug begins). In cases of a switch treatment, the end date of the first episode will be changed to the day preceding the start of the new episode. A treatment episode end date will also be changed to the earliest of date of death, end of health plan eligibility or end of study, should any of those events occur prior to the calculated end of a treatment episode. The **index treatment episode** will be the episode that begins on a patient's index date. Refer to **Figure 2** in the study protocol for a graphical description of these terms. See **ILD-Tables 1.3 and 2.3** for the presentation of the numbers of unique index drug treatment episodes and numbers of non-index study drugs dispensed to patients after their index date, by study drug cohort, in the two ILD study populations.

### **5.2.2 Follow-up period**

**Follow-up period** for patients in the ILD analysis begins on the day after the Index Date and ends at the first occurrence of either end of eligibility in the health plan, death, or the end of the study period.

### **5.2.3 Risk period**

**ILD Risk Period 1** is defined as the period that begins the day after the Index Date and continues until the earliest occurrence of the ILD event, end of eligibility in the health plan, death or the end of the study period.

**ILD Risk Period 2** is defined as the period that begins the day after the Index Date and continues until the earliest occurrence of the ILD event, end of eligibility in the health plan, death or the end of the index treatment episode.

### **5.2.4 Event identification, adjudication and event date**

#### **5.2.4.1 Event identification**

Two sets of diagnosis codes, corresponding to the narrow and broad definitions of ILD used for baseline screening, will be used to identify suspect events in the two ILD study populations.

Only hospitalizations in acute care facilities or skilled nursing facility settings will be considered for identification of outcomes under both the narrow and broad ILD definitions. In the DOD database, acute care hospitalizations will be defined as any that occurred in:

- A direct care facility (i.e., reported in the SIDR data table), or
- A purchased care facility (i.e., reported in the TED-I data table) coded as having occurred in an institution type 10 (General medical or surgical), 76 (Skilled nursing facility) or 91 (Sole community).

The two sets of diagnosis codes for identification of suspect ILD events are:

- The **Narrow ILD Definition** event diagnosis codes are listed below (and are also included as [Appendix C.2](#)). They will be used to identify suspect cases of ILD post-index date in ILD Study Population 1. The list includes:

**ICD-9-CM Diagnosis Codes (code must appear as a facility discharge diagnosis):**

- 515 Post-inflammatory pulmonary fibrosis
- 516.3 Idiopathic fibrosing alveolitis
  - 516.30 Idiopathic interstitial pneumonia, not otherwise specified (IIP)
  - 516.31 Idiopathic pulmonary fibrosis (IPF)
  - 516.32 Idiopathic non-specific interstitial pneumonitis (NSIP)
  - 516.33 Acute interstitial pneumonitis (AIP)
  - 516.34 Respiratory bronchiolitis interstitial lung disease (RB-ILD)
  - 516.35 Idiopathic lymphoid interstitial pneumonia (LIP)
  - 516.36 Cryptogenic organizing pneumonia (COP)
  - 516.37 Desquamative interstitial pneumonia (DIP)
- 516.8 Other specified alveolar and parietoalveolar pneumonopathies
- 516.9 Unspecified alveolar and parietoalveolar pneumonopathy

- The **Broad ILD Definition** event diagnosis codes are listed below (and are also included as [Appendix D.2](#)). They will consist of all those in the **Narrow ILD Definition**, plus additional codes potentially indicative of ILD despite not appearing in publications included in the Mini-Sentinel review. The list includes:

**ICD-9-CM Diagnosis Codes (code must appear as a facility discharge diagnosis):**

- 495.9 Unspecified allergic alveolitis and pneumonitis
- 515 Post-inflammatory pulmonary fibrosis
- 516.3 Idiopathic fibrosing alveolitis
  - 516.30 Idiopathic interstitial pneumonia, not otherwise specified (IIP)
  - 516.31 Idiopathic pulmonary fibrosis (IPF)
  - 516.32 Idiopathic non-specific interstitial pneumonitis (NSIP)
  - 516.33 Acute interstitial pneumonitis (AIP)
  - 516.34 Respiratory bronchiolitis interstitial lung disease (RB-ILD)
  - 516.35 Idiopathic lymphoid interstitial pneumonia (LIP)
  - 516.36 Cryptogenic organizing pneumonia (COP)
  - 516.37 Desquamative interstitial pneumonia (DIP)
- 516.8 Other specified alveolar and parietoalveolar pneumonopathies
- 516.9 Unspecified alveolar and parietoalveolar pneumonopathy

## 518.82 Other pulmonary insufficiency, not elsewhere classified

ILD events used for the primary analysis and the three sensitivity analyses will vary, depending on the combination of study population, ILD event definition and the event observation risk period.

**Table 1** identifies those combinations for each analysis.

**Table 1. ILD study population, event definition and event observation risk period**

| Analysis               | ILD Study Population   | ILD Event Definition  | Risk Period   |
|------------------------|------------------------|-----------------------|---------------|
| Primary Analysis       | ILD study population 1 | ILD Narrow Definition | Risk Period 1 |
| Sensitivity Analysis 1 | ILD study population 1 | ILD Narrow Definition | Risk Period 2 |
| Sensitivity Analysis 2 | ILD study population 2 | ILD Broad Definition  | Risk Period 1 |
| Sensitivity Analysis 3 | ILD study population 2 | ILD Broad Definition  | Risk Period 2 |

### 5.2.4.2 Event Adjudication

The following procedure will be used to identify ILD events for adjudication.

#### 5.2.4.2.1 DOD Analysis

Suspected ILD events for adjudication will be separately identified from the two ILD study populations (as the two populations will use different screening and outcome definitions).

For a given patient in ILD study population 1, the first occurrence of any one of the Narrow ILD definition codes appearing as a facility discharge diagnosis during the risk period will identify a suspected event. For a given patient in ILD study population 2, the first occurrence of any one of the Broad ILD definition codes appearing as a facility discharge diagnosis during the risk period will identify a suspected event.

Suspected events associated with patients in either ILD study population 1 or ILD study population 2 will be combined into one list. Exact duplicates (i.e., same patient and event) will be removed from the combined list and information about the remaining unique events will be forwarded for adjudication. It will be possible for one patient to appear twice in the list of events for adjudication (i.e., if they are identified by a different suspect event in each of the two ILD study populations).

Only those suspected events that receive a unanimous assessment of 'Yes' from the adjudicators will be counted as events for the analysis portion of the study. Adjudication of outcomes identified among patients in the Dronedarone, Sotalol, Flecainide, Dofetilide and Propafenone study drug cohorts will proceed in parallel with creation of the analysis dataset. Cases found in the Amiodarone cohort will only be forwarded for adjudication if the patient is retained in the propensity score matched analysis dataset. Since the Amiodarone cohort is the largest, by far, this two-step process will facilitate timely adjudication of cases while minimizing effort spent reviewing many that might be omitted from the final analysis. (See the study protocol for a detailed description of the adjudication process.)

#### **5.2.4.2.2 HealthCore Analysis**

For a given patient remaining in the HealthCore ILD analysis dataset (after propensity score matching – see [section 6](#)), the first occurrence of any one of the Narrow ILD definition codes appearing as a facility discharge diagnosis during the risk period will identify a suspected event.

Information about the suspected events will be forwarded for adjudication.

Only those suspected events that receive a unanimous assessment of ‘Yes’ from the adjudicators will be counted as events for the analysis portion of the study. (See the study protocol for a detailed description of the adjudication process.)

In the event that the sensitivity analyses are also conducted in the HealthCore data (see [section 4.2.2](#)), then the event identification and adjudication will be repeated for the analysis dataset based on ILD study population 2. Unique events identified in that analysis dataset (i.e., additional events not already identified in the primary analysis dataset) will be forwarded for adjudication.

#### **5.2.4.3 Event Date**

The admission date of the hospitalization from which a confirmed event was identified will be assigned as the event date. Patients will only be counted once (in each analysis) as having an ILD outcome, regardless of subsequent ILD diagnoses.

## **6 Propensity Score Matching**

As patients in the study databases were not randomly assigned to drug treatments, confounders cannot be assumed to be balanced across cohorts. Effects of potential confounding variables in this observational study will be controlled by means of propensity score (PS) matching of control subjects not exposed to dronedarone (i.e., comparators), to the dronedarone-exposed subjects. The PS matching will adjust for the non-random nature of the observational data by creating analysis datasets of dronedarone and comparator patients who are well matched with respect to baseline characteristics.

Separate PS-matched datasets will be created for each study population (SLD, ILD population 1 and ILD population 2). Propensity scores calculation and matching will be conducted separately for each of the two distinct ILD study populations, as determined by the two baseline screening diagnosis codes definitions. The PS modeling and matching processes described below will be the same for both ILD study populations. The PS-matched dataset based on the SLD study population will be referred to as the SLD analysis dataset. The PS-matched dataset based on ILD study population 1 will be referred to as ILD analysis dataset 1. The PS-matched dataset based on ILD study population 2 will be referred to as ILD analysis dataset 2.

The following steps will be conducted to create the analysis datasets.

## **6.1 Identification of Reduced Logistic Regression Model for Calculating PS**

### **6.1.1 SLD analysis PS model**

A PS will be calculated for each SLD patient from a logistic regression model based on all patients in the SLD study population (less cases assigned to cohorts with inadequate sample size). The model will use selected baseline patient demographic data, health care utilization information, and known potential risk factors / confounders to predict treatment with dronedarone. (See [Appendix F](#) for the list of variables.)

All variables listed in [Appendix F](#) will be entered as covariates in an initial (full) logistic regression model. Backward elimination will be used in the logistic regression computations to remove variables having no association with treatment, and variables that are redundant, or nearly so, with others included in the model. The model corresponding to the step with the lowest value on the Akaike information criterion (AIC) will be assessed as optimal, and used as the final (“reduced”) model for calculation of propensity scores.

The performance of the PS logistic model will be assessed by its ability to generate matched cohort groups that are balanced with respect to the group of baseline characteristics identified in [Appendix F](#). (See [section 6.4.1](#) for a description of the balance assessment.)

### **6.1.2 ILD analysis PS model**

The process described in this section will be executed separately to develop a unique reduced PS model for each of the two ILD study populations.

A PS will be calculated for each ILD patient from a logistic regression model based on all patients in the ILD study population (less cases assigned to cohorts with inadequate sample size). The model will use selected baseline patient demographic data, health care utilization information, and known potential risk factors / confounders to predict treatment with dronedarone. (See [Appendix G](#) for the list of variables.)

All variables listed in [Appendix G](#) will be entered as covariates in an initial (full) logistic regression model. Backward elimination will be used in the logistic regression computations to remove variables having no association with treatment, and variables that are redundant, or nearly so, with others included in the model. The model corresponding to the step with the lowest value on the Akaike information criterion (AIC) will be assessed as optimal, and used as the final (“reduced”) model for calculation of propensity scores.

The performance of the PS logistic model will be assessed by its ability to generate matched cohort groups that are balanced with respect to the group of baseline characteristics identified in [Appendix G](#). (See [section 6.4.1](#) for a description of the balance assessment.)

## **6.2 Calculation of PS**

### **6.2.1 Calculation of PS for SLD analysis**

The reduced logistic regression model identified for the SLD sub-cohort (as described in [section 6.1.1](#)) will be fitted separately to subsets of the SLD sub-cohort consisting of the dronedarone cohort in combination with each one of the comparator cohorts (excluding comparator cohorts with inadequate sample size).

The log-odds of the probability predicted by the reduced logistic regression model for each patient will be used as the PS. (The log-odds is the linear portion of the value predicted by the logistic model, prior to transformation into a probability.) A PS will be calculated for patients in each subset from the version of the regression model as fitted to patients in the subset (i.e., all dronedarone patients plus one set of comparator subjects at a time). Each dronedarone patient will therefore have a distinct PS for matching to each comparator cohort.

### **6.2.2 Calculation of PS for ILD analysis**

Propensity scores will be calculated separately for the two ILD study populations. Note that there will be overlap of patients between the two ILD study populations. Patients appearing in both ILD study populations will have a distinct PS calculated for each.

The reduced logistic regression models identified for the ILD study populations (as described in [section 6.1.2](#)) will be fitted separately to subsets of the respective ILD study populations consisting of the dronedarone cohort in combination with each one of the comparator cohorts (excluding comparator cohorts with inadequate sample size).

The log-odds of the probability calculated by the reduced logistic regression model will be used as the PS. (The log-odds is the linear portion of the value predicted by the logistic model, prior to transformation into a probability.) A PS will be calculated for patients in each subset from the version of the regression model as fitted to patients in the subset (i.e., all dronedarone patients plus one set of comparator subjects at a time). Each dronedarone patient will therefore have a distinct PS for matching to each comparator cohort.

## **6.3 PS Matching**

PS matching will be conducted separately, but using the same steps, for the SLD study population and for the two ILD study populations.

### **6.3.1 Matching Schemes**

An attempt will be made to match one patient from each of the five comparator cohorts (amiodarone, sotalol, flecainide, propafenone, and dofetilide) to each patient in the dronedarone cohort according to PS. (Comparator cohorts with inadequate sample size after screening will be omitted from the matching process.) Matching will be conducted without replacement.

A nearest-neighbor-within-caliper matching algorithm will be employed. Matching will be conducted with the PS defined as the log-odds of treatment with dronedarone. The initial caliper width will be 0.2 times the standard deviation of the PS for the subset being matched<sup>1</sup>. Alternate caliper widths may also be tested for evaluation of the trade-off between sample size and covariate balance.

### **6.3.2 Matching Procedure**

As previously mentioned, only those comparator drug cohorts with sample sizes adequate to detect a hazard ratio of 3.0 will be included in the matched datasets. Matching will be conducted for one dronedarone patient at a time, beginning with the subset of patients having the smallest group of comparators. If a match is found for the dronedarone patient in the smallest comparator group, then a match will be sought for that same patient in the next smallest comparator group. Matching for a given dronedarone patient will continue in this way, through the subset of patients with the largest comparator group. Matching will be conducted as follows (see also [Figure 1](#)):

1. Calculate the standard deviation of the PS for the dronedarone and comparator patients in each subset (i.e., each combination of dronedarone patients and patients from one comparator cohort). This will be the pooled standard deviation of patients in the subset, i.e.,

8. If a match for the selected dronedarone patient is found in Step 7, then continue with Step 9. If no match is found then drop the selected dronedarone patient from the analysis. Return comparators already matched to the dropped dronedarone patient to the comparator pool (for potential matching to other dronedarone patients). Select the next dronedarone patient from the randomly sorted list created in Step 3, and repeat the matching process from Step 5.
9. If a match is found in Step 7 for the selected dronedarone patient, repeat Steps 5 through 7 for the patient subset with the next smallest number of comparators. Continue repeating Steps 5 through 9 until no comparator match for the dronedarone patient is found in a subset, or matches have been found from each comparator cohort for the selected dronedarone patient.
10. If a match is found from each comparator cohort for the selected dronedarone patient, then add the selected dronedarone patient and the matched comparator patients to the analysis dataset. Remove the selected comparator patients from the pool of potential matches for subsequent dronedarone patients.
11. Repeat Steps 5 through 10 for each subsequent patient in the randomly sorted list of dronedarone patients.
12. The final set of dronedarone patients and their comparator matches serve as the analysis dataset.

## **6.4 Sensitivity Analyses of PS Matching**

Sensitivity analyses of the datasets created with each tested combination of logistic regression model and matching caliper will be conducted to determine the effectiveness of the combination at balancing baseline characteristics across the drug cohorts, and to ensure that outcome risks do not vary systematically with the PS values.

### **6.4.1 Assessment of Baseline Covariates' Balance in PS Matched Datasets**

Standardized differences will be calculated to compare the balance of baseline covariate values between the dronedarone patients and patients in each comparator cohort (means for continuous variables and proportions for dichotomous variables) both before and after PS matching. Although it is anticipated that only a subset of the group of covariates included in the full logistic regression model will be retained in the reduced model, all covariates from the full model will be included in the comparison of baseline distributions before and after PS matching. Covariates omitted from the reduced model will be identified in the comparison table with an asterisk (\*).

While some baseline characteristics may be unbalanced prior to PS matching, the matched cohorts should display evenly balanced characteristics.

Groups will be considered well balanced if the absolute value of the standardized difference between the dronedarone group and each comparator group is less than 0.1 for all of the variables.

Any variable for which the standardized difference is >0.25 will be considered unbalanced. Imbalance after PS matching in variables listed as key risk factors (identified in [Appendix F](#) and [Appendix G](#)) will trigger refitting the PS logistic regression model and/or explicit control for the variable(s) in the survival analysis (see [section 7.3.2](#)). Imbalance after PS matching in variables not listed as key risk factors will be controlled for in the survival analysis as long as the number of imbalances does not exceed the limit of a binomial distribution test. If there are more unbalanced variables than allowed for, then the PS logistic model will be refit with data transformations or the matching will be re-run with adjustments to caliper width.

For continuous covariates, the standardized difference is defined as

$$d = \frac{(\bar{x}_{treatment} - \bar{x}_{control})}{\sqrt{\frac{s_{treatment}^2 + s_{control}^2}{2}}},$$

where

$$d = \frac{(\hat{p}_{treatment} - \hat{p}_{control})}{\sqrt{\frac{\hat{p}_{treatment}(1 - \hat{p}_{treatment}) + \hat{p}_{control}(1 - \hat{p}_{control})}{2}}},$$

Within each dronedarone – comparator subset, include the PS and a cohort \* PS interaction as covariates in the CPH analysis of the outcome. Lack of statistical significance of the coefficient associated with the interaction term (i.e., p value above 0.05) will support the conclusion that the given outcome measure does not vary systematically by PS.

## **2. Test for constancy of hazard ratio across PS quintiles, for each cohort:**

Run separate CPH analyses (see [section 7.3.2.2](#)) for the outcomes of interest for each dronedarone – comparator subset, stratified by PS quintiles. For each subset analysis, the HR should fluctuate randomly across the five PS-based strata (i.e., no systematic variation across the PS quintiles).

## **3. Plot hazard ratios and confidence intervals:**

Forest plots will be generated for visual inspection of hazard ratios and corresponding 95% confidence intervals from CPH (see [section 7.3.2.2](#)), calculated according to PS quintiles within each comparator subset. Lack of systematic variation by PS will be confirmed by no observable trend in hazard ratios, and largely overlapping confidence intervals across the quintiles.

## **6.5 Selecting Analysis Datasets**

For each outcome of interest, the dataset of PS matched cases that adequately meets the requirements of the sensitivity analyses and represents the most acceptable tradeoff between too few well-matched dronedarone cases and a large number of poorly-matched cases will be selected for use in the outcomes analyses. The study statistician will exercise judgment related to balancing the target number of patients with the targeted degree of similarity between treatment and comparison cohorts in selecting the optimum dataset for each analysis.

## **7 Reporting Results**

All results described below will be reported separately for the SLD analysis, the primary ILD analysis and each of the ILD sensitivity analyses. Where applicable, there will be separate versions of the tables for the ILD study populations and analysis datasets created using the two diagnosis codes definitions.

### **7.1 Controlling for Type-1 Errors**

In these studies the Type 1 error rate will be controlled to a 0.05 test-wise alpha level. Significance will be inferred for any analysis in which the p-value is less than 0.05 for the comparison between the dronedarone cohort and a comparator (reference) cohort. No adjustments for multiple comparisons will be applied.

### **7.2 Descriptive Summaries**

Summary tables (descriptive statistics and/or frequency tables) will be provided.

Continuous variables will be summarized with descriptive statistics (n, mean, standard deviation, range, and median). Ninety-five percent confidence highest probability density (HPD) credible intervals may also be presented, as appropriate.

Frequency counts and percentage of subjects within each drug group per outcome will be provided for categorical data.

### 7.2.1 Baseline Characteristics

Selected baseline characteristics will be summarized for all patients eligible for inclusion in the outcome study populations, and separately for patients in the corresponding PS-matched analysis datasets. All results will be presented according to study drug cohort. The table layout and specific baseline characteristics to be reported appear in Tables **SLD-Table 1** (entire SLD study population), **SLD-Table 4** (SLD analysis dataset), **ILD-Table 1.1 and ILD-Table 2.1**, (entire ILD study population 1 and entire ILD study population 2, respectively), **ILD-Table 1.4 and ILD-Table 2.4**, (ILD analysis dataset 1 and ILD analysis dataset 2, respectively).

### 7.2.2 Follow-up Time

Numbers and proportions of patients will be reported for broad categories of follow-up time (as defined in [section 5.1.1](#)). Specific categories of follow-up time to be reported are found in **SLD-Table 2** (SLD study population), **SLD-Table 6** (SLD analysis dataset), **ILD-Tables 1.2 and 2.2**, (ILD study population 1 and ILD study population 2, respectively), and **ILD-Tables 1.6 and 2.6**, (ILD analysis dataset 1 and ILD analysis dataset 2, respectively). Follow-up time statistics will also be reported (i.e., mean, median, standard deviation, minimum and maximum).

### 7.2.3 Numbers and Proportions of Patients with Events

Numbers and proportions of patients with SLD/ILD events of interest confirmed by adjudication will be reported according to study drug cohort, along with p-values for the comparison of event proportions between dronedarone patients and each comparator drug group. Separate versions of this table will be created for patients with ILD events defined according to the four combinations of baseline screening diagnoses, event definition diagnoses and risk period definitions. Differences in proportions will be evaluated using the Fisher Exact test. Within study drug cohorts, numbers and proportions will also be reported according to:

- Patient demographic characteristics (age, gender and race), concomitant drugs, comorbidities;
- Latency periods, calculated from the index date to the outcome event date (e.g.,  $\leq 1$  month,  $> 1$  month to 6 months,  $> 6$  months exposure from the index date, as defined in [section 5.1.3](#));

Specific stratifications currently planned are listed in tables **SLD-Table 7**, **ILD-Tables 1.7 and 2.7**, (SLD, ILD 1 and ILD 2 study populations, respectively).

## 7.3 Analyses of Study Outcomes

All statistical analyses will be conducted using the PS-matched analysis datasets. Only events receiving a final decision of “Yes” by the adjudication committees will be considered. Specific analyses to be conducted are itemized below.

### 7.3.1 Incidence Rates

Incidence rates per 1,000 person years of follow-up time, and corresponding 95% confidence intervals, will be calculated by study drug cohort for each event analysis dataset (SLD, primary ILD, and ILD sensitivity analyses 1 - 3). The log-rank (Mantel-Haenszel) test will be used to test the statistical significance of differences between incidence rates of the dronedarone cohort and each of the comparator cohorts. See **SLD-Table 8** and **ILD-Tables 1.8, 1.10, 2.8, and 2.10** (ILD primary analysis and sensitivity analyses 1-3, respectively) for the proposed reporting format.

### 7.3.2 Survival Analyses

Cox proportional hazards regression and Kaplan-Meier (K-M) survival analysis will be used to examine the risk of each study outcome throughout the follow-up period for each comparator cohort versus dronedarone users (the dronedarone cohort will be the reference group in each analysis).

#### 7.3.2.1 Cox Proportional Hazards (CPH) Regression

CPH will be used to analyze the risk of each study outcome over the course of the follow-up period for each comparator cohort versus the dronedarone cohort.

Drug cohort will be the main independent variable (with dronedarone as the reference group) in these models. In the event that any baseline characteristics included in the PS model remain unbalanced between dronedarone and one or more of the comparator cohorts, models with covariates added to control for unbalanced characteristics will also be evaluated. Hazard ratios with 95% confidence intervals and corresponding p-values will be reported.

One version of the CPH analysis will be conducted for SLD, and four versions will be conducted for ILD (primary ILD and sensitivity analyses 1 - 3).

See **SLD-Table 8** and **ILD-Tables 1.8, 1.10, 2.8, and 2.10** (ILD primary analysis and sensitivity analyses 1-3, respectively) for the proposed reporting format.

##### 7.3.2.1.1 Evaluate the CPH model

For all models, Schoenfeld residuals will be examined to verify the proportionality assumption<sup>2</sup> of CPH analysis.

In addition, Harrell's C will be calculated to determine how well the model identifies patients with respect to their survival times.

The Hosmer-Lemeshow test will also be used to evaluate the predictive accuracy of the model. In this test, predicted survival probabilities at some time after follow-up (TBD based on data) will be calculated for comparison.

#### **7.3.2.2 K-M Graphs**

One K-M graph will be generated for the SLD analysis, and one each for the ILD primary analysis and the three ILD sensitivity analyses. The graphs will display separate survival curves for each study drug cohort (see sample in **Figure 2**). The log-rank (i.e., Mantel-Haenszel) test will be used to test for statistical significance of differences between the curves representing the dronedarone patients versus each of the comparator curves.

### **7.3.3 Sensitivity analysis of SLD (DoD dataset only) to addition of lab data**

A sensitivity analysis will be conducted in a subset of the SLD analysis dataset for which relevant lab test results are available to determine whether the laboratory data are a valuable addition to the clinical data with regard to the adjudicated results. Tests considered relevant to adjudication of SLD are: alanine transaminase levels, aspartate transaminase levels, and bilirubin levels [plus additional specific tests].

The value of adding the laboratory data will be assessed by having the adjudicators re-assess the subset of SLD cases, with the laboratory data also available for their review. Results from the two adjudications will be compared to assess differences in conclusions attributable to addition of the laboratory data. In the event that this reassessment of outcomes leads to changes in the adjudicated outcomes, the SLD analyses will be redone using as outcomes the cases confirmed with use of the lab data.

### **7.3.4 Sensitivity Analysis of ILD (DoD dataset only) to addition of smoking data**

A sensitivity analysis will be conducted in a subset of the ILD analysis dataset for which smoking status information is available to determine: 1) whether that subset is representative of the larger study population, and 2) whether the smoking status data are a valuable addition to the clinical data with regard to the results of the ILD events' adjudication.

The value of adding the smoking status data will be assessed by having the adjudicators re-assess events found in the subset of ILD cases, with the smoking status information also available for their review. Results from the two adjudications will be compared to assess differences in conclusions attributable to addition of the smoking status data.

<sup>a</sup> The SLD Analysis Dataset is a PS-matched subset of the SLD Study Population.

<sup>b</sup> Includes only "Yes" adjudicated outcome events.

(NOTE: This version of the table assumes Dofetilide cohort did not meet the sample size requirement and is excluded from further analysis.)

**SLD-Table 8: SLD PS-Matched Analysis Dataset<sup>a</sup> Incidence Rates (per 1000 person-years) and Hazard Ratios of Adjudicated Serious Liver Injury/Disease**

|                                  | Dronedarone | Amiodarone | Sotalol | Flecainide |
|----------------------------------|-------------|------------|---------|------------|
| # Cases (Yes)                    |             |            |         |            |
| # of Person-Years                |             |            |         |            |
| Incidence rate (95%CI)           |             |            |         |            |
| Crude HR (95%CI)                 | Reference   |            |         |            |
| Adjusted HR (95%CI) <sup>b</sup> | Reference   |            |         |            |

<sup>a</sup> The SLD Analysis Dataset is a PS-matched subset of the SLD Study Population.

<sup>b</sup> Adjusted for ... (if adjusted HR is calculated will specify covariates in this footnote)

(NOTE: This version of the table assumes Dofetilide cohort did not meet the sample size requirement; and is excluded from further analysis.)

<sup>a</sup> ILD Analysis Dataset 1 is a PS-matched subset of ILD Study Population 1, which uses the narrow ILD definition for baseline exclusionary screening (see **Appendix C.1**).

(Note: This version of the table assumes Dofetilide cohort did not meet the sample size requirement; and is excluded from further analysis.)

**ILD-Table 1.5: Standardized Differences in PS Model Covariates between Dronedarone and Comparator Cohorts for ILD Study Population 1<sup>a</sup> vs. ILD PS-Matched Analysis Dataset 1<sup>b</sup>**

| Covariates                                                            | ILD Study Population 1<br>(Prior to PS Matching) |    |    |    |                     |     |     | ILD Analysis Dataset 1<br>(PS Matched Subsets) |     |     |     |                     |     |     |

<sup>a</sup> ILD Analysis Dataset 1 is a PS-matched subset of ILD Study Population 1, which uses the narrow ILD definition for baseline exclusionary screening (see **Appendix C.1**).

<sup>b</sup> ILD Risk Period 1 begins the day after the Index Date and ends at the earliest occurrence of the ILD event, end of eligibility in the health plan, death or end of the study period.

<sup>c</sup> Includes only "Yes" adjudicated outcome events.

(NOTE: This version of the table assumes Dofetilide cohort did not meet the sample size requirement; and is excluded from further analysis.)

**ILD-Table 1.8: ILD Analysis Dataset 1<sup>a</sup> Incidence Rates (per 1000 person-years) and Hazard Ratios of Adjudicated Interstitial Lung Disease Events Identified during ILD Risk Period 1<sup>b</sup>**

| Crude HR (95%CI)                 | Reference   |            |         |            |
| Adjusted HR (95%CI) <sup>c</sup> | Reference   |            |         |            |

<sup>a</sup> ILD Analysis Dataset 1 is a PS-matched subset of ILD Study Population 1, which uses the narrow ILD definition for baseline exclusionary screening (see **Appendix C.1**).

<sup>b</sup> ILD Risk Period 1 begins the day after the Index Date and ends at the earliest occurrence of the ILD event, end of eligibility in the health plan, death or end of the study period.

<sup>c</sup> Adjusted for ... (if adjusted HR is calculated will specify covariates in this footnote)

(NOTE: This version of the table assumes Dofetilide cohort did not meet the sample size requirement; and is excluded from further analysis.)

<sup>a</sup> ILD Analysis Dataset 1 is a PS-matched subset of ILD Study Population 1, which uses the narrow ILD definition for baseline exclusionary screening (see **Appendix C.1**).

<sup>b</sup> ILD Risk Period 2 begins the day after the Index Date and ends at the earliest occurrence of the ILD event, end of eligibility in the health plan, death or end of the index treatment episode.

<sup>c</sup> Includes only "Yes" adjudicated outcome events.

(NOTE: This version of the table assumes Dofetilide cohort did not meet the sample size requirement; and is excluded from further analysis.)

4

<sup>a</sup> ILD Study Population 2 uses the broad ILD definition for baseline exclusionary screening (see **Appendix D.1**).

**ILD-Table 2.4: Baseline Characteristics of Patients in ILD Analysis Dataset 2<sup>a</sup> according to Study Drug Cohort**

| Characteristics                                       | Dronedarone<br>(N= ) | Amiodarone<br>(N= ) | Sotalol<br>(N= ) | Flecainide<br>(N= ) |
|-------------------------------------------------------|----------------------|---------------------|------------------|---------------------|
| Age at cohort entry date, N (%)                       |                      |                     |                  |                     |
| 18-39 years                                           |                      |                     |                  |                     |
| 40-49 years                                           |                      |                     |                  |                     |
| 50-59 years                                           |                      |                     |                  |                     |
| 60-69 years                                           |                      |                     |                  |                     |
| 70-79 years                                           |                      |                     |                  |                     |
| 80+ years                                             |                      |                     |                  |                     |

<sup>a</sup> ILD Analysis Dataset 2 is a PS-matched subset of ILD Study Population 2, which uses the broad ILD definition for baseline exclusionary screening (see **Appendix D.1**).

(NOTE: This version of the table assumes Dofetilide cohort did not meet the sample size requirement; and is excluded from further analysis.)

**ILD-Table 2.5: Standardized Differences in PS Model Covariates between Dronedarone and Comparator Cohorts for ILD Study Population 2<sup>a</sup> vs. ILD Analysis Dataset 2<sup>b</sup>**

| Covariates                                                            | ILD Study Population 1<br>(Prior to PS Matching) |    |    |    |                     |     |     | ILD Analysis Dataset 1<br>(PS Matched Subsets) |     |     |     |                     |     |     |

<sup>a</sup> ILD Analysis Dataset 2 is a PS-matched subset of ILD Study Population 2, which uses the broad ILD definition for baseline exclusionary screening (see **Appendix D.1**).

<sup>b</sup> ILD Risk Period 1 begins the day after the Index Date and ends at the earliest occurrence of the ILD event, end of eligibility in the health plan, death or end of the study period.

<sup>c</sup> Includes only “Yes” adjudicated outcome events.

(NOTE: This version of the table assumes Dofetilide cohort did not meet the sample size requirement; and is excluded from further analysis.)

**ILD-Table 2.8: ILD Analysis Dataset 2<sup>a</sup> Incidence Rates (per 1000 person-years) and Hazard Ratios of Adjudicated Interstitial Lung Disease Events Identified during ILD Risk Period 1<sup>b</sup>**

<sup>a</sup> ILD Analysis Dataset 2 is a PS-matched subset of ILD Study Population 2, which uses the broad ILD definition for baseline exclusionary screening (see **Appendix D.1**).

<sup>b</sup> ILD Risk Period 1 begins the day after the Index Date and ends at the earliest occurrence of the ILD event, end of eligibility in the health plan, death or end of the study period.

<sup>c</sup> Adjusted for ... (if adjusted HR is calculated will specify covariates in this footnote)

(NOTE: This version of the table assumes Dofetilide cohort did not meet the sample size requirement; and is excluded from further analysis.)

<sup>a</sup> ILD Analysis Dataset 2 is a PS-matched subset of ILD Study Population 2, which uses the broad ILD definition for baseline exclusionary screening (see **Appendix D.1**).

<sup>b</sup> ILD Risk Period 2 begins the day after the Index Date and ends at the earliest occurrence of the ILD event, end of eligibility in the health plan, death or end of the index treatment episode.

<sup>c</sup> Includes only “Yes” adjudicated outcome events.

(NOTE: This version of the table assumes Dofetilide cohort did not meet the sample size requirement; and is excluded from further analysis.)

## APPENDIX A.2 EXCLUSIONARY CONDITIONS DEFINITIONS – SCREENING CRITERIA APPLIED TO ALL PATIENTS

### History of Cancer

#### ICD-9-CM Diagnosis Range

140 – 209.xx Cancer

V10.x Personal history of malignant neoplasms

### History of Organ Transplant

#### ICD-9-CM Diagnoses

996.81 Complications of a transplanted kidney  
996.82 Complications of a transplanted liver  
996.83 Complications of a transplanted heart  
996.84 Complications of a transplanted lung  
996.86 Complications of a transplanted pancreas  
V42.0x Transplant - Kidney, status post  
V42.1x Transplant – Heart  
V42.6x Transplant – Lung  
V42.7x Transplant - Liver  
V42.83 Pancreas replaced by transplant

#### ICD-9-CM Procedures

33.5 Lung transplant  
33.50 Lung transplantation, not otherwise specified  
33.51 Unilateral lung transplantation  
33.52 Bilateral lung transplantation  
33.6 Combined heart-lung transplantation  
37.51 Heart transplantation  
37.55 Removal of internal biventricular heart replacement system  
52.8 Transplant of pancreas  
52.80 Pancreatic transplant, not otherwise specified  
52.81 Reimplantation of pancreatic tissue  
52.82 Homotransplant of pancreas  
52.83 Heterotransplant of pancreas  
52.84 Autotransplantation of cells of islets of langerhans  
52.85 Allotransplantation of cells of islets of langerhans  
52.86 Transplantation of cells of islets of langerhans, not otherwise specified  
55.53 Removal transplant/rejected kidney  
55.69 Other kidney transplantation

#### CPT® Procedures

32851 Lung transplant, single; without cardiopulmonary bypass  
32852 Lung transplant, single; with cardiopulmonary bypass  
32853 Lung transplant, double (bilateral sequential or en bloc); without cardiopulmonary bypass  
32854 Lung transplant, double (bilateral sequential or en bloc); with cardiopulmonary bypass  
33935 Heart-lung transplant with recipient cardiectomy-pneumonectomy  
33945 Heart transplant, with or without recipient cardiectomy  
47135 Liver allotransplantation; orthotopic, partial or whole, from cadaver or living donor, any age  
47136 Liver allotransplantation; heterotopic, partial or whole, from cadaver or living donor, any age  
48160 Pancreatectomy, total or subtotal, with autologous transplantation of pancreas or pancreatic islet cells

|       |                                                                                 |
|-------|---------------------------------------------------------------------------------|
| 48554 | Transplantation of pancreatic allograft                                         |
| 48556 | Removal of transplanted pancreatic allograft                                    |
| 50360 | Renal allotransplantation, implantation of graft; without recipient nephrectomy |
| 50365 | Renal allotransplantation, implantation of graft; with recipient nephrectomy    |
| 50370 | Removal of transplanted renal allograft                                         |
| 50380 | Renal autotransplantation, reimplantation of kidney                             |

## History of HIV

### ICD-9-CM Diagnosis

|     |                                            |
|-----|--------------------------------------------|
| 042 | Human immunodeficiency virus (HIV) disease |
|-----|--------------------------------------------|

## History of Pregnancy (Index date minus 280, through index date minus 1)

### ICD-9-CM Diagnoses

|        |                                                                                                 |
|--------|-------------------------------------------------------------------------------------------------|
| V22    | Normal pregnancy                                                                                |
| V22.0  | Supervision of normal first pregnancy                                                           |
| V22.1  | Supervision of other normal pregnancy                                                           |
| V22.2  | Pregnant state incidental                                                                       |
| V23    | Supervision of high-risk pregnancy                                                              |
| V23.0  | Supervision of high-risk pregnancy with history of infertility                                  |
| V23.1  | Supervision of high-risk pregnancy with history of trophoblastic disease                        |
| V23.2  | Supervision of high-risk pregnancy with history of abortion                                     |
| V23.3  | Supervision of high-risk pregnancy with grand multiparity                                       |
| V23.4  | Supervision of high-risk pregnancy with other poor obstetric history                            |
| V23.41 | Supervision of high-risk pregnancy with history of pre-term labor                               |
| V23.42 | Supervision of high-risk pregnancy with history of ectopic pregnancy                            |
| V23.49 | Supervision of high-risk pregnancy with other poor obstetric history                            |
| V23.5  | Supervision of high-risk pregnancy with other poor reproductive history                         |
| V23.7  | Supervision of high-risk pregnancy with insufficient prenatal care                              |
| V23.8  | Supervision of other high-risk pregnancy                                                        |
| V23.81 | Supervision of high-risk pregnancy with elderly primigravida                                    |
| V23.82 | Supervision of high-risk pregnancy with elderly multigravida                                    |
| V23.83 | Supervision of high-risk pregnancy with young primigravida                                      |
| V23.84 | Supervision of high-risk pregnancy with young multigravida                                      |
| V23.85 | Supervision of high-risk pregnancy resulting from assisted reproductive technology              |
| V23.86 | Supervision of high-risk pregnancy with history of in utero procedure during previous pregnancy |
| V23.87 | Supervision of high-risk pregnancy with inconclusive fetal viability                            |
| V23.89 | Supervision of other high-risk pregnancy                                                        |
| V23.9  | Supervision of unspecified high-risk pregnancy                                                  |
| V28    | Encounter for antenatal screening of mother                                                     |
| V28.0  | Screening for chromosomal anomalies by amniocentesis                                            |
| V28.1  | Screening for raised alpha-fetoprotein levels in amniotic fluid                                 |
| V28.2  | Other antenatal screening based on amniocentesis                                                |
| V28.3  | Encounter for routine screening for malformation using ultrasonics                              |
| V28.4  | Antenatal screening for fetal growth retardation using ultrasonics                              |
| V28.5  | Antenatal screening for isoimmunization                                                         |
| V28.6  | Antenatal screening for streptococcus b                                                         |
| V28.8  | Other specified antenatal screening                                                             |
| V28.81 | Encounter for fetal anatomic survey                                                             |
| V28.82 | Encounter for screening for risk of preterm labor                                               |
| V28.89 | Other specified antenatal screening                                                             |
| V28.9  | Unspecified antenatal screening                                                                 |

### ICD-9-CM Procedures

|       |                                       |
|-------|---------------------------------------|
| 72    | Forceps, vacuum, and breech delivery  |
| 72.0  | Low forceps operation                 |
| 72.1  | Low forceps operation with episiotomy |
| 72.2  | Mid forceps operation                 |
| 72.21 | Mid forceps operation with episiotomy |
| 72.29 | Other mid forceps operation           |

- 72.3 High forceps operation
- 72.31 High forceps operation with episiotomy
- 72.39 Other high forceps operation
- 72.4 Forceps rotation of fetal head
- 72.5 Breech extraction
- 72.51 Partial breech extraction with forceps to aftercoming head
- 72.52 Other partial breech extraction
- 72.53 Total breech extraction with forceps to aftercoming head
- 72.54 Other total breech extraction
- 72.6 Forceps application to aftercoming head
- 72.7 Vacuum extraction
- 72.71 Vacuum extraction with episiotomy
- 72.79 Other vacuum extraction
- 72.8 Other specified instrumental delivery
- 72.9 Unspecified instrumental delivery
- 73 Other procedures inducing or assisting delivery
- 73.0 Artificial rupture of membranes
- 73.01 Induction of labor by artificial rupture of membranes
- 73.09 Other artificial rupture of membranes
- 73.1 Other surgical induction of labor
- 73.2 Internal and combined version and extraction
- 73.21 Internal and combined version without extraction
- 73.22 Internal and combined version with extraction
- 73.3 Failed forceps
- 73.4 Medical induction of labor
- 73.5 Manually assisted delivery
- 73.51 Manual rotation of fetal head
- 73.59 Other manually assisted delivery
- 73.6 Episiotomy
- 73.8 Operations on fetus to facilitate delivery
- 73.9 Other operations assisting delivery
- 73.91 External version assisting delivery
- 73.92 Replacement of prolapsed umbilical cord
- 73.93 Incision of cervix to assist delivery
- 73.94 Pubiotomy to assist delivery
- 73.99 Other operations assisting delivery
- 74 Cesarean section and removal of fetus
- 74.0 Classical cesarean section
- 74.1 Low cervical cesarean section
- 74.2 Extraperitoneal cesarean section
- 74.3 Removal of extratubal ectopic pregnancy
- 74.4 Cesarean section of other specified type
- 74.9 Cesarean section of unspecified type
- 74.91 Hysterotomy to terminate pregnancy
- 74.99 Other cesarean section of unspecified type
- 75 Other obstetric operations
- 75.0 Intra-amniotic injection for abortion
- 75.1 Diagnostic amniocentesis
- 75.2 Intrauterine transfusion
- 75.3 Other intrauterine operations on fetus and amnion
- 75.31 Amnioscopy
- 75.32 Fetal ekg (scalp)
- 75.33 Fetal blood sampling and biopsy
- 75.34 Other fetal monitoring
- 75.35 Other diagnostic procedures on fetus and amnion
- 75.36 Correction of fetal defect
- 75.37 Amnioinfusion
- 75.38 Fetal pulse oximetry

#### **CPT Procedures**

- 59120 Tx ectopic pregnancy abdominal/vaginal appr
- 59121 Tx ectopic pregnancy w/o salping&/oophorectomy

59130 Tx ectopic pregnancy abdl pregnancy  
 59135 Tx ectopic pregnancy ntrstl req tot hyst  
 59136 Tx ectopic pregnancy ntrstl prtl rescj uter  
 59140 Tx ectopic pregnancy cervical w/evacuation  
 59150 Laps tx ectopic preg w/o salping&oophorectomy  
 59151 Laps tx ectopic preg w/salping&oophorectomy  
 59160 Curettage postpartum  
 59200 Insertion cervical dilator separate procedure  
 59300 Episiotomy/vag rpr oth/thn attending  
 59320 Cerclage cervix pregnancy vaginal  
 59325 Cerclage cervix pregnancy abdominal  
 59350 Hysterorrhaphy ruptured uterus  
 59400 Ob care antepartum vag dlvr & postpartum  
 59409 Vaginal delivery only  
 59410 Vaginal delivery only w/postpartum care  
 59412 External cephalic version w/wo tocolysis  
 59414 Delivery placenta separate procedure  
 59425 Antepartum care only 4-6 visits  
 59426 Antepartum care only 7/> visits  
 59430 Postpartum care only separate procedure  
 59510 Ob antepartum care cesarean dlvr & postpartum  
 59514 Cesarean delivery only  
 59515 Cesarean delivery only w/postpartum care  
 59525 Stot/tot hysterectomy after cesaren delivery  
 59610 Routine ob care vag dlvr & postpartum care vb  
 59612 Vaginal delivery after cesarean delivery  
 59614 Vaginal delivery & postpartum care vbac  
 59618 Routine obstetrical care attempted vbac  
 59620 Cesarean delivery attempted vbac  
 59622 Cesarean dlvr & postpartum care attempted vba  
 59812 Tx incomplete abortion any trimester surgical  
 59820 Tx missed abortion first trimester surgical  
 59821 Tx missed abortion second trimester surgical  
 59830 Tx septic abortion surgical  
 59840 Induced abortion dilation and curettage  
 59841 Induced abortion dilation & evaucation  
 59850 Induced abortion 1/> amniotic injx w/d&c/evacj  
 59851 Induce abort 1/> amniot njxs dlvr fetus d&c  
 59852 Induce abort 1/> amniot njxs dlvr fetus hystotm  
 59855 Induced abort 1/> vag suppositories dlvr fetus  
 59856 Induced abort 1/> vag supp dlvr fetus d&c &/evac  
 59857 Induced abort 1/> vag suppos dlvr fetus hystot  
 59866 Multifetal pregnancy reduction  
 59870 Uterine evacuation & curettage hydatidiform mole  
 59871 Removal cerclage suture under anesthesia  
 59897 Unlisted fetal invasive px w/ultrasound  
 59898 Unlisted laparoscopy px maternity care&delivery  
 59899 Unlisted procedure maternity care & delivery  
 76801 Us pregnant uterus 14 wk transabdl 1/1st gestat  
 76802 Us preg uterus 14 wk transabdl each gestation  
 76805 Us preg uterus after 1st trimest 1/1st gestation  
 76810 Us preg uterus > 1st trimester abdl ea gestatio  
 76811 Us preg uterus w/detail fetal anat 1st gestation

## History of Pregnancy

### ICD-9-CM Diagnoses

- 631 – 639.xx Ectopic and molar pregnancy and other pregnancy with abortive outcomes
- 640 – 649.xx Complications mainly related to pregnancy
- 650 – 659.xx Normal delivery, and other indications for care in pregnancy, labor, and delivery
- 660 – 669.xx Complications occurring mainly in the course of labor and delivery
- 670 – 677.xx Complications of the puerperium
- 678 – 679.xx Other maternal and fetal complications

## **APPENDIX B.1 SERIOUS LIVER INJURY/DISEASE OUTCOME EVENT DEFINITION; BASELINE EXCLUSIONARY SCREENING**

### **ICD-9-CM Codes / Descriptions**

#### **History of Serious Liver Injury/Disease**

##### **ICD-9-CM Diagnoses**

277.4 Disorders of bilirubin excretion  
570 Acute and subacute necrosis of liver  
571.5 Cirrhosis of liver without mention of alcohol  
572.2 Hepatic coma  
572.4 Hepatorenal syndrome  
572.8 Other sequelae of chronic liver disease\*  
573.0 Chronic passive congestion of liver  
573.3 Hepatitis, unspecified  
573.8 Other specified disorders of liver  
573.9 Unspecified disorder of liver  
782.4 Jaundice, unspecified  
794.8 Nonspecific abnormal results of liver function test  
V42.7 Liver replaced by transplant

##### **ICD-9-CM Procedures**

50.11 Closed (percutaneous) [needle] biopsy of liver  
50.12 Open biopsy of liver  
50.13 Transjugular liver biopsy  
50.14 Laparoscopic liver biopsy  
50.5 Liver transplant  
50.51 Auxiliary liver transplant  
50.59 Other transplant of liver  
50.91 Percutaneous aspiration of liver

##### **CPT® Procedures**

47000 Biopsy of liver, needle; percutaneous  
47001 Biopsy of liver, needle; done at time of other major procedure  
47100 Biopsy of liver, wedge  
47135 Liver allotransplantation; orthotopic, partial or whole  
47136 Liver allotransplantation; heterotopic, partial or whole  
78205 Liver imaging (SPECT)  
78206 Liver imaging (SPECT); with vascular flow

### **History of Viral Hepatitis**

- 070.0 Viral Hepatitis A With Hepatic Coma
  - 070.1 Viral Hepatitis A Without Hepatic Coma
  - 070.2 Viral Hepatitis B With Hepatic Coma
  - 070.20 Viral Hepatitis B With Hepatic Coma Acute Or Unspecified Without Hepatitis Delta
  - 070.21 Viral Hepatitis B With Hepatic Coma Acute Or Unspecified With Hepatitis Delta
  - 070.22 Chronic Viral Hepatitis B With Hepatic Coma Without Hepatitis Delta
  - 070.23 Chronic Viral Hepatitis B With Hepatic Coma With Hepatitis Delta
  - 070.3 Viral Hepatitis B Without Mention Of Hepatic Coma
  - 070.30 Viral Hepatitis B Without Hepatic Coma Acute Or Unspecified Without Hepatitis Delta
  - 070.31 Viral Hepatitis B Without Hepatic Coma Acute Or Unspecified With Hepatitis Delta
  - 070.32 Chronic Viral Hepatitis B Without Hepatic Coma Without Hepatitis Delta
  - 070.33 Chronic Viral Hepatitis B Without Hepatic Coma With Hepatitis Delta
  - 070.4 Other Specified Viral Hepatitis With Hepatic Coma
  - 070.41 Acute Hepatitis C With Hepatic Coma
  - 070.42 Hepatitis Delta Without Active Hepatitis B Disease With Hepatic Coma
  - 070.43 Hepatitis E With Hepatic Coma
  - 070.44 Chronic Hepatitis C With Hepatic Coma
  - 070.49 Other Specified Viral Hepatitis With Hepatic Coma
  - 070.5 Other Specified Viral Hepatitis Without Mention Of Hepatic Coma
  - 070.51 Acute Hepatitis C Without Mention Of Hepatic Coma
  - 070.52 Hepatitis Delta Without Active Hepatitis B Disease Or Hepatic Coma
  - 070.53 Hepatitis E Without Hepatic Coma
  - 070.54 Chronic Hepatitis C Without Hepatic Coma
  - 070.59 Other Specified Viral Hepatitis Without Hepatic Coma
  - 070.7 Unspecified Viral Hepatitis C
  - 070.70 Unspecified Viral Hepatitis C Without Hepatic Coma
  - 070.71 Unspecified Viral Hepatitis C With Hepatic Coma
  - V02.61 Carrier Or Suspected Carrier Of Hepatitis B
  - V02.62 Carrier Or Suspected Carrier Of Hepatitis C
- 

### **Non-Specific – Other Related Hepatitis**

- 070.6 Unspecified Viral Hepatitis With Hepatic Coma
- 070.9 Unspecified Viral Hepatitis Without Hepatic Coma
- 072.71 Mumps Hepatitis
- 091.62 Secondary Syphilitic Hepatitis
- 571.4 Chronic Hepatitis
- 571.40 Chronic Hepatitis, Unspecified
- 571.41 Chronic Persistent Hepatitis
- 571.42 Autoimmune Hepatitis
- 571.49 Other Chronic Hepatitis

571.8 Other Chronic Nonalcoholic Liver Disease  
572.0 Abscess of Liver  
V02.6 Carrier Or Suspected Carrier Of Viral Hepatitis  
V02.60 Carrier Or Suspected Carrier Of Viral Hepatitis Unspecified  
V02.69 Carrier Or Suspected Carrier Of Other Viral Hepatitis

---

### **History of Hereditary Conditions**

271.0 Glycogenosis (Type 1 glycogen storage disease)  
271.1 Galactosemia  
273.4 Alpha-1-Antitrypsin Deficiency  
275.0 Disorders of Iron Metabolism (Hemochromatosis)  
275.01 Hereditary hemochromatosis  
275.03 Other hemochromatosis  
275.1 Disorders of Copper Metabolism (Wilson's disease)  
759.89 Alagille syndrome

---

## **APPENDIX B.2 serious liver injury / disease outcome event definition – GROUP A CODES**

### **Group A ICD-9-CM Codes / Descriptions - usually reflects Liver Injury/Disease**

#### **ICD-9-CM Diagnoses** (may occur in any code position; inpatient setting):

570 Acute and subacute necrosis of liver  
572.2 Hepatic coma  
572.4 Hepatorenal syndrome  
V42.7 Liver replaced by transplant

#### **ICD-9-CM Procedures** (may occur in any code position; inpatient setting):

50.5 Liver transplant  
50.51 Auxiliary liver transplant  
50.59 Other transplant of liver

#### **CPT®** (may occur in any code position; inpatient setting):

47135 Liver allotransplantation; orthotopic, partial or whole  
47136 Liver allotransplantation; heterotopic, partial or whole

---

## **APPENDIX B.3 serious liver injury / disease outcome event definition – GROUP B CODES**

### **Group B ICD-9-CM Codes / Descriptions - highly suspicious, suggestive of Liver Injury/Disease**

#### **ICD-9-CM Diagnoses** (diagnosis must be a primary diagnosis; inpatient setting):

277.4 Disorders of bilirubin excretion  
571.5 Cirrhosis of liver without mention of alcohol  
572.8 Other sequelae of chronic liver disease  
573.0 Chronic passive congestion of liver  
573.3 Hepatitis, unspecified  
573.8 Other specified disorders of liver  
573.9 Unspecified disorder of liver  
782.4 Jaundice, unspecified  
794.8 Nonspecific abnormal results of liver function test

#### **ICD-9-CM Procedures** (may occur in any code position; inpatient setting):

50.11 Closed (percutaneous) [needle] biopsy of liver  
50.12 Open biopsy of liver  
50.13 Transjugular liver biopsy  
50.14 Laparoscopic liver biopsy  
50.91 Percutaneous aspiration of liver

#### **CPT®** (may occur in any code position; inpatient setting):

47000 Biopsy of liver, needle; percutaneous  
47001 Biopsy of liver, needle; done at time of other major procedure  
47100 Biopsy of liver, wedge  
78205 Liver imaging (SPECT)  
78206 Liver imaging (SPECT); with vascular flow

---

## APPENDIX B.4 LIVER INJURY/DISEASE - RISK FACTORS / CONFOUNDER DEFINITIONS

Codes to identify pre-existing risk factors / confounders for serious liver disease propensity score model.

| ICD-9-CM                                 | Diagnosis Code Description                                                       |
|------------------------------------------|----------------------------------------------------------------------------------|
| <b>History of Alcoholism</b>             |                                                                                  |
| 571.0                                    | Alcoholic Fatty Liver                                                            |
| 571.1                                    | Acute Alcoholic Hepatitis                                                        |
| 571.2                                    | Alcoholic Cirrhosis Of Liver                                                     |
| 571.3                                    | Unspecified Alcoholic Liver Damage                                               |
| <b>History of Biliary Duct Disorders</b> |                                                                                  |

## APPENDIX C.1 INTERSTITIAL LUNG DISEASE OUTCOME EVENT – POPULATION 1 (NARROW ILD DEFINITION) BASELINE EXCLUSIONARY SCREENING

### ICD-9-CM Code Descriptions

#### History of Interstitial Lung Disease (Narrow)

|        |                                                                  |
|--------|------------------------------------------------------------------|
| 515    | Post-inflammatory pulmonary fibrosis                             |
| 516.3  | Idiopathic fibrosing alveolitis                                  |
| 516.30 | Idiopathic interstitial pneumonia, not otherwise specified (IIP) |
| 516.31 | Idiopathic pulmonary fibrosis (IPF)                              |
| 516.32 | Idiopathic non-specific interstitial pneumonitis (NSIP)          |
| 516.33 | Acute interstitial pneumonitis (AIP)                             |
| 516.34 | Respiratory bronchiolitis interstitial lung disease (RB-ILD)     |
| 516.35 | Idiopathic lymphoid interstitial pneumonia (LIP)                 |
| 516.36 | Cryptogenic organizing pneumonia (COP)                           |
| 516.37 | Desquamative interstitial pneumonia (DIP)                        |
| 516.8  | Other specified alveolar and parietoalveolar pneumonopathies     |
| 516.9  | Unspecified alveolar and parietoalveolar pneumonopathy           |

#### History of Pneumonia

|        |                                                                |
|--------|----------------------------------------------------------------|
| 480    | Viral Pneumonia                                                |
| 480.0  | Pneumonia Due To Adenovirus                                    |
| 480.1  | Pneumonia Due To Respiratory Syncytial Virus                   |
| 480.2  | Pneumonia Due To Parainfluenza Virus                           |
| 480.3  | Pneumonia Due To Sars-Associated Coronavirus                   |
| 480.8  | Pneumonia Due To Other Virus Not Elsewhere Classified          |
| 480.9  | Viral Pneumonia Unspecified                                    |
| 481    | Pneumococcal Pneumonia [Streptococcus Pneumoniae Pneumonia]    |
| 482    | Other Bacterial Pneumonia                                      |
| 482.0  | Pneumonia Due To Klebsiella Pneumoniae                         |
| 482.1  | Pneumonia Due To Pseudomonas                                   |
| 482.2  | Pneumonia Due To Hemophilus Influenzae (H. Influenzae)         |
| 482.3  | Pneumonia Due To Streptococcus                                 |
| 482.30 | Pneumonia Due To Streptococcus Unspecified                     |
| 482.31 | Pneumonia Due To Streptococcus Group A                         |
| 482.32 | Pneumonia Due To Streptococcus Group B                         |
| 482.39 | Pneumonia Due To Other Streptococcus                           |
| 482.4  | Pneumonia Due To Staphylococcus                                |
| 482.40 | Pneumonia Due To Staphylococcus Unspecified                    |
| 482.41 | Methicillin Susceptible Pneumonia Due To Staphylococcus Aureus |
| 482.42 | Methicillin Resistant Pneumonia Due To Staphylococcus Aureus   |
| 482.49 | Other Staphylococcus Pneumonia                                 |
| 482.8  | Pneumonia Due To Other Specified Bacteria                      |
| 482.81 | Pneumonia Due To Anaerobes                                     |
| 482.82 | Pneumonia Due To Escherichia Coli [E.Coli]                     |

|        |                                                  |
|--------|--------------------------------------------------|
| 482.83 | Pneumonia Due To Other Gram-Negative Bacteria    |
| 482.84 | Pneumonia Due To Legionnaires' Disease           |
| 482.89 | Pneumonia Due To Other Specified Bacteria        |
| 482.9  | Bacterial Pneumonia Unspecified                  |
| 483.8  | Pneumonia Due To Other Specified Organism        |
| 485    | Bronchopneumonia Organism Unspecified            |
| 486    | Pneumonia Organism Unspecified                   |
| 487.0  | Influenza with Pneumonia                         |
| 507.0  | Pneumonitis due to inhalation of food or vomitus |
| V12.61 | Personal History of Pneumonia (Recurrent)        |

## APPENDIX C.2 INTERSTITIAL LUNG DISEASE OUTCOME EVENT NARROW DEFINITION

ICD-9-CM Diagnosis Codes (code must appear as a facility discharge diagnosis):

### ICD-9-CM Code Descriptions

|        |                                                                  |
|--------|------------------------------------------------------------------|
| 515    | Post-inflammatory pulmonary fibrosis                             |
| 516.3  | Idiopathic fibrosing alveolitis                                  |
| 516.30 | Idiopathic interstitial pneumonia, not otherwise specified (IIP) |
| 516.31 | Idiopathic pulmonary fibrosis (IPF)                              |
| 516.32 | Idiopathic non-specific interstitial pneumonitis (NSIP)          |
| 516.33 | Acute interstitial pneumonitis (AIP)                             |
| 516.34 | Respiratory bronchiolitis interstitial lung disease (RB-ILD)     |
| 516.35 | Idiopathic lymphoid interstitial pneumonia (LIP)                 |
| 516.36 | Cryptogenic organizing pneumonia (COP)                           |
| 516.37 | Desquamative interstitial pneumonia (DIP)                        |
| 516.8  | Other specified alveolar and parietoalveolar pneumonopathies     |
| 516.9  | Unspecified alveolar and parietoalveolar pneumonopathy           |

---

## APPENDIX D.1 INTERSTITIAL LUNG DISEASE OUTCOME EVENT – POPULATION 2 (BROAD ILD DEFINITION) BASELINE EXCLUSIONARY SCREENING

### ICD-9-CM Code Descriptions

#### **History of Interstitial Lung Disease (Broad)**

|        |                                                                                     |
|--------|-------------------------------------------------------------------------------------|
| 495.9  | Unspecified allergic alveolitis and pneumonitis                                     |
| 515    | Post-inflammatory pulmonary fibrosis                                                |
| 516.3  | Idiopathic fibrosing alveolitis                                                     |
| 516.30 | Idiopathic interstitial pneumonia, not otherwise specified (IIP)                    |
| 516.31 | Idiopathic pulmonary fibrosis (IPF)                                                 |
| 516.32 | Idiopathic non-specific interstitial pneumonitis (NSIP)                             |
| 516.33 | Acute interstitial pneumonitis (AIP)                                                |
| 516.34 | Respiratory bronchiolitis interstitial lung disease (RB-ILD)                        |
| 516.35 | Idiopathic lymphoid interstitial pneumonia (LIP)                                    |
| 516.36 | Cryptogenic organizing pneumonia (COP)                                              |
| 516.37 | Desquamative interstitial pneumonia (DIP)                                           |
| 516.8  | Other specified alveolar and parietoalveolar pneumonopathies                        |
| 516.9  | Unspecified alveolar and parietoalveolar pneumonopathy                              |
| 518    | Other diseases of lung                                                              |
| 518.0  | Pulmonary collapse                                                                  |
| 518.1  | Interstitial emphysema                                                              |
| 518.2  | Compensatory emphysema                                                              |
| 518.3  | Pulmonary eosinophilia                                                              |
| 518.4  | Acute edema of lung unspecified                                                     |
| 518.5  | Pulmonary insufficiency following trauma and surgery                                |
| 518.51 | Acute respiratory failure following trauma and surgery                              |
| 518.52 | Other pulmonary insufficiency not elsewhere classified following trauma and surgery |
| 518.53 | Acute and chronic respiratory failure following trauma and surgery                  |
| 518.6  | Allergic bronchopulmonary aspergilliosis                                            |
| 518.7  | Transfusion related acute lung injury (trali)                                       |
| 518.8  | Other diseases of lung                                                              |
| 518.81 | Acute respiratory failure                                                           |
| 518.82 | Other pulmonary insufficiency not elsewhere classified                              |
| 518.83 | Chronic respiratory failure                                                         |
| 518.84 | Acute and chronic respiratory failure                                               |
| 518.89 | Other diseases of lung not elsewhere classified                                     |

### **History of Pneumonia**

|        |                                                                |
|--------|----------------------------------------------------------------|
| 480    | Viral Pneumonia                                                |
| 480.0  | Pneumonia Due To Adenovirus                                    |
| 480.1  | Pneumonia Due To Respiratory Syncytial Virus                   |
| 480.2  | Pneumonia Due To Parainfluenza Virus                           |
| 480.3  | Pneumonia Due To Sars-Associated Coronavirus                   |
| 480.8  | Pneumonia Due To Other Virus Not Elsewhere Classified          |
| 480.9  | Viral Pneumonia Unspecified                                    |
| 481    | Pneumococcal Pneumonia [Streptococcus Pneumoniae Pneumonia]    |
| 482    | Other Bacterial Pneumonia                                      |
| 482.0  | Pneumonia Due To Klebsiella Pneumoniae                         |
| 482.1  | Pneumonia Due To Pseudomonas                                   |
| 482.2  | Pneumonia Due To Hemophilus Influenzae (H. Influenzae)         |
| 482.3  | Pneumonia Due To Streptococcus                                 |
| 482.30 | Pneumonia Due To Streptococcus Unspecified                     |
| 482.31 | Pneumonia Due To Streptococcus Group A                         |
| 482.32 | Pneumonia Due To Streptococcus Group B                         |
| 482.39 | Pneumonia Due To Other Streptococcus                           |
| 482.4  | Pneumonia Due To Staphylococcus                                |
| 482.40 | Pneumonia Due To Staphylococcus Unspecified                    |
| 482.41 | Methicillin Susceptible Pneumonia Due To Staphylococcus Aureus |
| 482.42 | Methicillin Resistant Pneumonia Due To Staphylococcus Aureus   |
| 482.49 | Other Staphylococcus Pneumonia                                 |
| 482.8  | Pneumonia Due To Other Specified Bacteria                      |
| 482.81 | Pneumonia Due To Anaerobes                                     |
| 482.82 | Pneumonia Due To Escherichia Coli [E.Coli]                     |
| 482.83 | Pneumonia Due To Other Gram-Negative Bacteria                  |
| 482.84 | Pneumonia Due To Legionnaires' Disease                         |
| 482.89 | Pneumonia Due To Other Specified Bacteria                      |
| 482.9  | Bacterial Pneumonia Unspecified                                |
| 483.8  | Pneumonia Due To Other Specified Organism                      |
| 485    | Bronchopneumonia Organism Unspecified                          |
| 486    | Pneumonia Organism Unspecified                                 |
| 487.0  | Influenza with Pneumonia                                       |
| 507.0  | Pneumonitis due to inhalation of food or vomitus               |
| V12.61 | Personal History of Pneumonia (Recurrent)                      |

### **History of Sarcoidosis**

|     |             |
|-----|-------------|
| 135 | Sarcoidosis |
|-----|-------------|

## APPENDIX D.2 INTERSTITIAL LUNG DISEASE OUTCOME EVENT BROAD DEFINITION

ICD-9-CM Diagnosis Codes (code must appear as a facility discharge diagnosis):

### ICD-9-CM Code Description

|        |                                                                  |
|--------|------------------------------------------------------------------|
| 495.9  | Unspecified allergic alveolitis and pneumonitis                  |
| 515    | Post-inflammatory pulmonary fibrosis                             |
| 516.3  | Idiopathic fibrosing alveolitis                                  |
| 516.30 | Idiopathic interstitial pneumonia, not otherwise specified (IIP) |
| 516.31 | Idiopathic pulmonary fibrosis (IPF)                              |
| 516.32 | Idiopathic non-specific interstitial pneumonitis (NSIP)          |
| 516.33 | Acute interstitial pneumonitis (AIP)                             |
| 516.34 | Respiratory bronchiolitis interstitial lung disease (RB-ILD)     |
| 516.35 | Idiopathic lymphoid interstitial pneumonia (LIP)                 |
| 516.36 | Cryptogenic organizing pneumonia (COP)                           |
| 516.37 | Desquamative interstitial pneumonia (DIP)                        |
| 516.8  | Other specified alveolar and parietoalveolar pneumonopathies     |
| 516.9  | Unspecified alveolar and parietoalveolar pneumonopathy           |
| 518.82 | Other pulmonary insufficiency, not elsewhere classified          |

---

## APPENDIX E. INTERSTITIAL LUNG DISEASE - RISK FACTORS / CONFOUNDER DEFINITIONS

Codes to identify pre-existing risk factors / confounders for interstitial lung disease propensity score model.

### ICD-9-CM Code Descriptions

#### History of Asthma

|        |                                                      |
|--------|------------------------------------------------------|
| 493    | Asthma                                               |
| 493.0  | Extrinsic Asthma                                     |
| 493.00 | Extrinsic Asthma Unspecified                         |
| 493.01 | Extrinsic Asthma With Status Asthmaticus             |
| 493.02 | Extrinsic Asthma With (Acute) Exacerbation           |
| 493.1  | Intrinsic Asthma                                     |
| 493.10 | Intrinsic Asthma Unspecified                         |
| 493.11 | Intrinsic Asthma With Status Asthmaticus             |
| 493.12 | Intrinsic Asthma With (Acute) Exacerbation           |
| 493.2  | Chronic Obstructive Asthma                           |
| 493.20 | Chronic Obstructive Asthma Unspecified               |
| 493.21 | Chronic Obstructive Asthma With Status Asthmaticus   |
| 493.22 | Chronic Obstructive Asthma With (Acute) Exacerbation |
| 493.8  | Other Specified Asthma                               |
| 493.81 | Exercise-Induced Bronchospasm                        |
| 493.82 | Cough Variant Asthma                                 |
| 493.9  | Asthma Unspecified                                   |
| 493.90 | Asthma Unspecified                                   |
| 493.91 | Asthma Unspecified Type With Status Asthmaticus      |
| 493.92 | Asthma Unspecified With (Acute) Exacerbation         |

#### History of Bronchitis

|        |                                                          |
|--------|----------------------------------------------------------|
| 490    | Bronchitis Not Specified As Acute Or Chronic             |
| 491    | Chronic Bronchitis                                       |
| 491.0  | Simple Chronic Bronchitis                                |
| 491.1  | Mucopurulent Chronic Bronchitis                          |
| 491.2  | Obstructive Chronic Bronchitis                           |
| 491.20 | Obstructive Chronic Bronchitis Without Exacerbation      |
| 491.21 | Obstructive Chronic Bronchitis With (Acute) Exacerbation |
| 491.22 | Obstructive Chronic Bronchitis With Acute Bronchitis     |
| 491.8  | Other Chronic Bronchitis                                 |
| 491.9  | Unspecified Chronic Bronchitis                           |
| 494    | Bronchiectasis                                           |
| 494.0  | Bronchiectasis Without Acute Exacerbation                |
| 494.1  | Bronchiectasis With Acute Exacerbation                   |

**History of chronic obstructive pulmonary disease**

|     |                                                     |
|-----|-----------------------------------------------------|
| 496 | Chronic Airway Obstruction Not Elsewhere Classified |
|-----|-----------------------------------------------------|

**History of connective tissue disease**

|        |                                            |
|--------|--------------------------------------------|
| 136.1  | Behçet syndrome (very rare)                |
| 446.21 | Goodpasture syndrome                       |
| 710.0  | Systemic lupus erythematosus               |
| 710.1  | Systemic sclerosis                         |
| 710.2  | Sjögren syndrome                           |
| 710.3  | Dermatomyositis                            |
| 710.4  | Polymyositis                               |
| 710.8  | Mixed connective tissue disease            |
| 710.9  | Undifferentiated connective tissue disease |
| 714.xx | Rheumatoid arthritis                       |
| 720.0  | Ankylosing spondylitis (rare)              |

**History of exposure to occupational and environmental toxins**

|       |                                                                     |
|-------|---------------------------------------------------------------------|
| 495   | Extrinsic Allergic Alveolitis                                       |
| 495.0 | Farmers' Lung                                                       |
| 495.1 | Bagassosis                                                          |
| 495.2 | Bird-Fanciers' Lung                                                 |
| 495.3 | Suberosis                                                           |
| 495.4 | Malt Workers' Lung                                                  |
| 495.5 | Mushroom Workers' Lung                                              |
| 495.6 | Maple Bark-Strippers' Lung                                          |
| 495.7 | Ventilation Pneumonitis                                             |
| 495.8 | Other Specified Allergic Alveolitis And Pneumonitis                 |
| 495.9 | Unspecified Allergic Alveolitis And Pneumonitis                     |
| 500   | Coal Workers' Pneumoconiosis                                        |
| 501   | Asbestosis                                                          |
| 502   | Pneumoconiosis Due To Other Silica Or Silicates                     |
| 503   | Pneumoconiosis Due To Other Inorganic Dust                          |
| 504   | Pneumonopathy Due To Inhalation Of Other Dust                       |
| 505   | Pneumoconiosis Unspecified                                          |
| 506   | Respiratory Conditions Due To Chemical Fumes And Vapors             |
| 506.0 | Bronchitis And Pneumonitis Due To Fumes And Vapors                  |
| 506.1 | Acute Pulmonary Edema Due To Fumes And Vapors                       |
| 506.2 | Upper Respiratory Inflammation Due To Fumes And Vapors              |
| 506.3 | Other Acute And Subacute Resp Conditions Due To Fumes And Vapors    |
| 506.4 | Chronic Respiratory Conditions Due To Fumes And Vapors              |
| 506.9 | Unspecified Respiratory Conditions Due To Fumes And Vapors          |
| 507   | Pneumonitis Due To Solids And Liquids                               |
| 507.1 | Pneumonitis Due To Inhalation Of Oils And Essences                  |
| 507.8 | Pneumonitis Due To Other Solids And Liquids                         |
| 508   | Respiratory Conditions Due To Other And Unspecified External Agents |

|       |                                                               |
|-------|---------------------------------------------------------------|
| 508.0 | Acute Pulmonary Manifestations Due To Radiation               |
| 508.1 | Chronic And Other Pulmonary Manifestations Due To Radiation   |
| 508.2 | Respiratory Conditions Due To Smoke Inhalation                |
| 508.8 | Respiratory Conditions Due To Other Specified External Agents |
| 508.9 | Respiratory Conditions Due To Unspecified External Agent      |

---

#### **History of gastroesophageal reflux disease**

---

|        |                                 |
|--------|---------------------------------|
| 530.81 | Gastroesophageal reflux disease |
|--------|---------------------------------|

---

#### **Anti-arrhythmic agents other than the study medications**

##### **Therapeutic class # 240404\***

|                                             |                             |
|---------------------------------------------|-----------------------------|
| Bretylium Tosylate (Discontinued June 2011) | Procainamide Hydrochloride  |
| Bretylium Tosylate/Dextrose                 | Quinidine Gluconate         |
| Dextrose/Lidocaine Hydrochloride            | Quinidine Polygalacturonate |
| Disopyramide Phosphate                      | Quinidine Sulfate           |
| Lidocaine Hydrochloride                     | Tocainide Hydrochloride     |
| Mexiletine Hydrochloride                    |                             |

\* Systemic use; screen for only the agents listed above.

## **History of therapeutic oxygen treatment**

### **Oxygen Therapy – CPT Procedure Codes**

| <b>CPT</b> | <b>CPT Description</b>                                                                                                                                                                                                                                                                          |
|------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 4030F      | Long-term oxygen therapy prescribed (more than 15 hours per day) (COPD)                                                                                                                                                                                                                         |
| 82803      | Gases, blood, any combination of pH, pCO <sub>2</sub> , pO <sub>2</sub> , CO <sub>2</sub> , HCO <sub>3</sub>                                                                                                                                                                                    |
| 82805      | Gases, blood, any combination of pH, pCO <sub>2</sub> , pO <sub>2</sub> , CO <sub>2</sub> , HCO <sub>3</sub> (including calculated O <sub>2</sub> saturation); with O <sub>2</sub> saturation, by direct measurement, except pulse oximetry                                                     |
| 82810      | Gases, blood, O <sub>2</sub> saturation only, by direct measurement, except pulse oximetry                                                                                                                                                                                                      |
| 94010      | Spirometry, including graphic record, total and timed vital capacity, expiratory flow rate measurement(s), with or without maximal voluntary ventilation                                                                                                                                        |
| 94014      | Patient-initiated spirometric recording per 30-day period of time; includes reinforced education, transmission of spirometric tracing, data capture, analysis of transmitted data, periodic recalibration and review and interpretation by a physician/other qualified health care professional |
| 94015      | Patient-initiated spirometric recording per 30-day period of time; recording                                                                                                                                                                                                                    |
| 94016      | Patient-initiated spirometric recording per 30-day period of time; review and interpretation only by a physician or other qualified health care professional                                                                                                                                    |
| 94060      | Bronchodilation responsiveness, spirometry as in 94010, pre- and post-bronchodilator admin                                                                                                                                                                                                      |
| 94070      | Bronchospasm provocation evaluation, multiple spirometric determinations as in 94010, with administered agents (eg, antigen[s], cold air, methacholine)                                                                                                                                         |
| 94150      | Vital capacity, total (separate procedure)                                                                                                                                                                                                                                                      |
| 94200      | Maximum breathing capacity, maximal voluntary ventilation                                                                                                                                                                                                                                       |
| 94250      | Expired gas collection, quantitative, single procedure (separate procedure)                                                                                                                                                                                                                     |
| 94375      | Respiratory flow volume loop                                                                                                                                                                                                                                                                    |
| 94400      | Breathing response to CO <sub>2</sub> (CO <sub>2</sub> response curve)                                                                                                                                                                                                                          |
| 94450      | Breathing response to hypoxia (hypoxia response curve)                                                                                                                                                                                                                                          |

|       |                                                                                                                                                                     |
|-------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 94452 | High altitude simulation test (HAST), with interpretation and report by a physician or other qualified health care professional;                                    |
| 94453 | High altitude simulation test (HAST), with interpretation and report by a physician or other qualified health care professional; with supplemental oxygen titration |
| 94610 | Intrapulmonary surfactant administration by a physician or other qualified health care professional through endotracheal tube                                       |
| 94620 | Pulmonary stress testing; simple                                                                                                                                    |
| 94621 | Pulmonary stress testing; complex                                                                                                                                   |
| 94640 | Pressurized or nonpressurized inhalation treatment for acute airway obstruction or for sputum induction for diagnostic purposes                                     |
| 94642 | Aerosol inhalation of pentamidine for pneumocystis carinii pneumonia treatment/prophylaxis                                                                          |
| 94644 | Continuous inhalation treatment w aerosol medication for acute airway obstruction; 1 <sup>st</sup> hour                                                             |
| 94645 | Continuous inhalation treatment w/ aerosol medication for acute airway obstruction; ea add hr                                                                       |
| 94660 | Continuous positive airway pressure ventilation (CPAP), initiation and management                                                                                   |
| 94662 | Continuous negative pressure ventilation (CNP), initiation and management                                                                                           |
| 94664 | Demonstration and/or evaluation of patient utilization of an aerosol generator, nebulizer, metered dose inhaler or IPPB device                                      |
| 94667 | Manipulation chest wall, such as cupping, percussing, and vibration to facilitate lung function; initial demonstration and/or evaluation                            |
| 94668 | Manipulation chest wall, such as cupping, percussing, and vibration to facilitate lung function; subsequent                                                         |
| 94680 | Oxygen uptake, expired gas analysis; rest and exercise, direct, simple                                                                                              |
| 94681 | Oxygen uptake, expired gas analysis; including CO2 output, percentage oxygen extracted                                                                              |
| 94690 | Oxygen uptake, expired gas analysis; rest, indirect (separate procedure)                                                                                            |
| 94726 | Plethysmography for determination of lung volumes and, when performed, airway resistance                                                                            |
| 94727 | Gas dilution or washout for determination of lung volumes and, when performed, distribution of ventilation and closing volumes                                      |
| 94728 | Airway resistance by impulse oscillometry                                                                                                                           |
| 94729 | Diffusing capacity (eg, carbon monoxide, membrane)                                                                                                                  |
| 94750 | Pulmonary compliance study (eg, plethysmography, volume and pressure measurements)                                                                                  |
| 94760 | Noninvasive ear or pulse oximetry for oxygen saturation; single determination                                                                                       |
| 94761 | Noninvasive ear or pulse oximetry for oxygen saturation; multiple determinations                                                                                    |
| 94762 | Noninvasive ear or pulse oximetry for oxygen saturation; by continuous overnight monitoring                                                                         |
| 94770 | Carbon dioxide, expired gas determination by infrared analyzer                                                                                                      |
| 99503 | Home visit - respiratory therapy care (eg, oxygen therapy, respiratory assessment, apnea eval)                                                                      |
| 99504 | Home visit for mechanical ventilation care                                                                                                                          |

### **Oxygen Therapy – HCPCS Procedure Codes**

| <b>HCPCS</b> | <b>HCPCS Description</b>                                                                                                                                                                  |
|--------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| E0424        | Stationary compressed gaseous oxygen system, rental; includes container, contents, regulator, flowmeter, humidifier, nebulizer, cannula or mask, and tubing                               |
| E0425        | Stationary compressed gas system, purchase; includes regulator, flowmeter, humidifier, nebulizer, cannula or mask, and tubing                                                             |
| E0430        | Portable gaseous oxygen system, purchase; includes regulator, flowmeter, humidifier, cannula or mask, and tubing                                                                          |
| E0431        | Portable gaseous oxygen system, rental; includes portable container, regulator, flowmeter, humidifier, cannula or mask, and tubing                                                        |
| E0433        | Portable liquid oxygen system, rental; home liquefier used to fill portable liquid oxygen containers, includes portable containers, regulator, flowmeter, humidifier, cannula or mask and |

tubing, with or without supply reservoir and content gauge

|       |                                                                                                                                                                                             |
|-------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| E0434 | Portable liquid oxygen system, rental; includes portable container, supply reservoir, humidifier, flowmeter, refill adaptor, contents gauge, cannula or mask, and tubing                    |
| E0435 | Portable liquid oxygen system purchase; includes portable container, supply reservoir, flowmeter, humidifier, contents gauge, cannula or mask, tubing and refill adaptor                    |
| E0439 | Stationary liquid oxygen system, rental; includes container, contents, regulator, flowmeter, humidifier, nebulizer, cannula or mask, and tubing                                             |
| E0440 | Stationary liquid oxygen system, purchase; includes use of reservoir, contents indicator, regulator, flowmeter, humidifier, nebulizer, cannula or mask, and tubing                          |
| E0441 | Oxygen contents, gaseous (for use with owned gaseous stationary systems or when both a stationary and portable gaseous system are owned), 1 month's supply = 1 unit                         |
| E0442 | Oxygen contents, liquid (for use with owned liquid stationary systems or when both a stationary and portable liquid system are owned), 1 month's supply = 1 unit                            |
| E0443 | Portable oxygen contents, gaseous (for use only with portable gaseous systems when no stationary gas or liquid system is used), 1 month's supply = 1 unit                                   |
| E0444 | Portable oxygen contents, liquid (for use only with portable liquid systems when no stationary gas or liquid system is used), 1 month's supply = 1 unit                                     |
| E1390 | Oxygen concentrator, single delivery port, capable of delivering 85 percent or greater oxygen concentration at the prescribed flow rate                                                     |
| E1391 | Oxygen concentrator, dual delivery port, capable of delivering 85 percent or greater oxygen concentration at the prescribed flow rate, each                                                 |
| E1392 | Portable oxygen concentrator, rental                                                                                                                                                        |
| E1405 | Oxygen and water vapor enriching system with heated delivery                                                                                                                                |
| E1406 | Oxygen and water vapor enriching system without heated delivery                                                                                                                             |
| K0738 | Portable gaseous oxygen system, rental; home compressor used to fill portable oxygen cylinders; includes portable containers, regulator, flowmeter, humidifier, cannula or mask, and tubing |
| K0741 | Portable gaseous oxygen system, rental, includes portable container, regulator, flowmeter, humidifier, cannula or mask, and tubing, for cluster headaches                                   |
| S8120 | Oxygen contents, gaseous, 1 unit equals 1 cubic foot                                                                                                                                        |
| S8121 | Oxygen contents, liquid, 1 unit equals 1 pound                                                                                                                                              |

#### Medication Proxy (Medication dispensed prior to index date)

Bupropion (Zyban)  
Varenicline (Chantix)

## APPENDIX F. SLD Propensity Score Model Development: Selection of Variables

The following variables will all be entered as covariates in the initial logistic regression model used as the starting point for developing a reduced model. The reduced model will be used to calculate propensity scores for patients in the SLD sub-cohort. All variables will be assessed during the baseline period, unless otherwise specified. Specific diagnosis and procedure codes defining covariates marked with an asterisk (\*) are found in **Appendix B.4**. Imbalance after PS matching in variables listed as key risk factors will trigger refitting the PS logistic model and/or explicit control for the variable in the CPH survival analysis models.

### Liver Injury/Disease:

#### **Key risk factors**

- History of Alcoholism\*;
- History of use of hepatotoxic medications\*;
- History of Congestive heart failure\*;
- Number of hospitalizations in acute care facilities<sup>†</sup>;
- Number of different medications (by therapeutic class);

#### **Other risk factors**

- Gender (male=1; female=0);
- Age on index date (Age groups:<50; 50-<60; 60-<70; 70-<80, 80+);
- Days from start of study to patient index date: <180,180-<360;360-<540,540+;
- Number of study medications other than the index drug;
- Use of anti-arrhythmic other than one of the study medications\*;
- History of Bile duct disorders (e.g., primary sclerosing cholangitis)\*;
- History of Obesity;
- History of Diabetes [Diagnosis or anti-diabetic therapy]\*;
- Number of office visits;
- Number of ER visits;
- Gastroenterology specialty visits (1 or more visits=1; no visits=0).

<sup>†</sup> In the DOD data, acute care facilities will be all direct care facilities (i.e., those reported in the SIDR data table) and hospitalizations at facilities with Institution Type of 10 (General medical or surgical), 76 (Skilled nursing facility) or 91 (Sole community) reported in the purchased care data table (TED-I).

## **APPENDIX G. ILD Propensity Score Model Development: Selection of Variables**

The following variables will all be entered as covariates in the initial logistic regression model used as the starting point for developing a reduced model from which propensity scores will be developed for patients in the ILD sub-cohort. All variables will be assessed during the baseline period, unless otherwise specified. Specific diagnosis and procedure codes defining covariates marked with an asterisk (\*) are found in **Appendix E**. Imbalance after PS matching in variables listed as key risk factors will trigger refitting the PS logistic model and/or explicit control for the variable in the CPH survival analysis models.

### **Interstitial Lung Disease:**

#### **Key risk factors**

- History of Exposure to occupational and environmental toxins\*;
- History of Asthma\*;
- History of Chronic obstructive pulmonary disease\*;
- History of Bronchitis (excluding acute bronchitis)\*;
- Prior use of Therapeutic oxygen treatment\*;
- History of Gastroesophageal reflux disease\*;
- History of Connective Tissue Disease\*;
- Number of hospitalizations in acute care facilities<sup>†</sup>;
- Prior use of Agents Associated with Drug Induced Pulmonary Disease (individual drug groups: Antimicrobial medications; Selected Cardiovascular Agents; Anti-Inflammatory Medications; Biologic Medications; Chemotherapy agents; Miscellaneous)\*;
- Pulmonology specialty visits (1 or more visits=1; no visits=0).

#### **Other risk factors**

- Gender (male=1; female=0);
- Age on index date (Age groups:<50; 50-<60; 60-<70; 70-<80, 80+);
- Days from start of study to patient index date ( <180,180-<360;360-<540,540+);
- Number of study medications other than the index drug ;
- Use of anti-arrhythmic other than one of the study medications\*;
- Number of office visits;
- Number of ER visits;

- Number of different medications (by therapeutic class);

<sup>†</sup> In the DOD data, acute care facilities will be all direct care facilities (i.e., those reported in the SIDR data table) and hospitalizations at facilities with Institution Type of 10 (General medical or surgical), 76 (Skilled nursing facility) or 91 (Sole community) reported in the purchased care data table (TED-I).

Note: Self-reported information on exposure to smoking has been found to be unreliable. Therefore History of smoking will not be used as a propensity score model variable. However, a sensitivity analysis will be conducted if sufficient smoking data are available to do so.

- History of Smoking\*; (Look at “Smoking Status” [Demographic variable], separately.)
  - Medication Proxy
    - bupropion (Zyban)
    - varenicline (Chantix)
